SCARABÆUS (Lat., beetle). A black or metallic colored dung-beetle, the *Atuchus sacer* or *Scarabæus Egyptiorum*, common in Mediterranean countries, and especially in Egypt. The Egyptian name of the insect was *Kheper*, from a stem meaning 'to become, to come into being,' and a picture of the beetle was the usual ideographic sign for the verbal stem and its derivatives. The Egyptians believed that no female of the species existed, but that the male, contravening the ordinary law of generation, himself produced the egg and thus perpetuated his existence by his own act. The scarabæus, therefore, became the type and emblem of all 'self-begotten' deities, and in particular of the god Kheperi, whose name signifies 'he who is (in process of) becoming.' This deity typified the rising sun, renewing his birth each morning, and he is usually represented as a man with a scarabæus upon, or in place of, his head. The scarabæus was also the type of the human soul emerging from the mummy, just as the beetle emerged from its egg, and flying upward to heaven, and thus the insect became a symbol of the resurrection and of immortality. From a very early period scarabæi, carved out of metal or of stone, or molded in faïence, were used as amulets. They were inscribed with religious texts, with the names of deities or famous kings, or with symbolic magical devices, and were worn by the living or placed upon the mummies of the dead. Such carved scarabæi are usually called scarabs, and large numbers of them have been found dating from nearly all periods of Egyptian history. In the earlier specimens the wings are folded; in later times the beetle is not infrequently represented with the wings extended. In the mummy, a large scarab, inscribed with a particular chapter of the *Book of the Dead* (q.v.), usually replaced the heart of the deceased, which was removed during the process of embalmment. By virtue of this amulet the deceased was enabled to pass the ordeal of the 'weighing of the heart' at the final judgement. (See DEATH, JUDGMENT OF THE.) Consult: Wiedemann, *Religion of the Ancient Egyptians* (New York, 1897); Petrie, *Historical Scarabs* (London, 1899); Myer, *Scarabs* (ib., 1894); Ward, *Sacred Beets* (New York, 1902).

SCARAMOUCHE (Fr. *scaramouche*, from It. *scaramuccia*, skirmish). A character in the old Italian comedy, originally derived from Spain, representing a military poltroon and braggadocio. He was dressed in a sort of Hispano-Neapolitan

costume, entirely black, with a mask upon the forehead, cheeks, and chin, and regularly received an inglorious drubbing at the hands of Harlequin or Polichinelle. The most celebrated actor of the character was the Neapolitan comedian Tiberio Fiorilli (1698-96), who lived in France after 1640 and was better known as *Scaramouche* than by his own name.

SCARBOROUGH, skär'brō or skär'būr-ō. A seaport and health resort, popularly called the 'Queen of English Watering Places,' in Yorkshire, England, in the North Riding, 37 miles northeast of York (Map: England, F 2). The town is built in successive terraces and crescents on rising ground around a beautiful bay open to the south and southwest, and protected on the northeast by a promontory ending in a castle-crowned height, which looks out on the North Sea. Two bridges span the picturesque ravine of Ramsdale Valley and connect the western or ancient part of the town with its large and fashionable southern suburb. There is a fine promenade pier, and the tidal harbor, inclosed by three piers, has a lighthouse and floating dock. The chief buildings are the spa, an extensive aquarium, museum, and market hall. The municipality owns considerable real estate and the water and gas supplies, and has built a marine drive and sea wall around the castle, two and one-fourth miles in length. There are manufactures of jet; a coasting trade; and lucrative fisheries. The castle was erected about the year 1136. Here Piers Gaveston (q.v.) was besieged by the barons in 1312. It was twice besieged by the Parliamentary forces. It serves as a barrack, and is fortified by batteries. Population, in 1891, 33,800; in 1901, 38,200. Consult Haviland, *Scarborough as a Health Resort* (London, 1884).

SCARF SKIN. See SKIN.

SCARIA, skär'rō-ā, EMIL (1838-86). An Austrian dramatic bass singer, born at Gratz. He made a successful debut in 1860, at Pesth, as Saint-Bris in *Les Huguenots*. In 1862 he went to London to finish his studies under Garcia. Afterwards he was engaged at Dessau, Leipzig, Dresden, and finally at the Court Opera in Vienna. He was a most remarkable bass and was celebrated as an interpreter of Wagner, creating the rôle of Wotan at Bayreuth in 1876, and Gurnemanz (*Parsifal*) in 1882.

SCARIDÆ (Neo-Lat. nom. pl., from Lat. *scarus*, from Gk. σκάρος, *skaros*, sort of sea-fish). A large family of tropical bony fishes comprising the parrot-fishes (q.v.). The body is oblong with large scales, and often gorgeously colored.

SCARLATTI, skär-lät'tè, ALESSANDRO (1649-1725). An Italian composer, born at Trapani in Sicily. In 1680 Scarlatti visited Rome, and composed his first opera, *L'onesta nell'amore*, first performed at the Court of Queen Christina of Sweden. His opera *Pompeo* was performed at Naples in 1684. In 1693 he composed the oratorio *I dolori di Maria sempre Vergine*, and the opera *Tandore*, in which (so far as known) orchestral accompaniments were first introduced to the recitatives, and a separate design was given to the accompaniments of the arias. In the following eight years, during part of which time he was *maestro di cappella* at Naples, he produced various operas, the most remarkable being *Lodovico e Berenice*, composed in 1701. Between

1703 and 1709 he was *maestro di capella* at Santa Maria Maggiore at Rome; he then returned to Naples, and in 1715 produced *Il Tigrano*. His musical works comprise 117 operas, several oratorios, and a great deal of church music, besides various madrigals and other chamber music. He was the founder of the Neapolitan school, in which were trained most of the great musicians of the eighteenth century. His modulations, often unexpected, are never harsh, and never difficult for the voice. He is supposed to have been the first composer or musician to divide the strings into four parts. His instrumentation is both bold and skillful; and his orchestration shows that he had a knowledge and appreciation of the art of grouping instruments of differing timbre which was remarkable for his time.

SCARLET (OF. *scarlate*, Fr. *écarlate*, from ML. *scarlatum*, scarlet, scarlet cloth, from Pers. *siqalāt*, *siqalāt*, *siqlāt*, scarlet cloth). A vivid red color, inclining toward orange. It was formerly obtained exclusively from the cochineal (q.v.) insect, treated with zinc chloride and cream of tartar, but it is also now derived from coal-tar (q.v.). It is frequently used in the fine arts and in dyeing, and, like purple, was esteemed a color particularly suitable for costly attire.

SCARLET FEVER, OF SCARLATINA. One of the exanthemata or eruptive fevers. It is a contagious disease and is characterized by fever, sore throat, a bright red eruption, and a tendency to acute inflammation of the kidneys. Children are chiefly affected, and one attack protects against another. This explains its rarity in adult life. Scarlatina is extremely infectious and contagious, and the *contagium* has been carried by books, papers, and clothing for long distances. Three varieties of the malady are usually described, viz.: The ordinary form, *scarlatina simplex*, in which the rash and fever are present, with but few throat symptoms; *scarlatina anginosa*, in which, in addition to the rash and fever, the throat is severely affected; and *scarlatina maligna*, in which the attack is violent and the system is rapidly overwhelmed with the infection. This form is usually fatal in two or three days.

Scarlet fever begins as a rule suddenly, after an incubation period of from 4 to 6 days, with a chill, vomiting, headache, languor, pains in the back and limbs, and loss of appetite. The temperature rises rapidly to 103° or 105° F., and remains high during the course of the disease. The rash appears from 12 to 36 hours after the first symptoms, first on the chest and neck, but spreading over the entire body in a few hours. It consists of minute red spots set closely together, so that the skin is covered with a bright red flush. About the fifth day the rash begins to fade and is followed by desquamation or shedding of the superficial layers of the skin. This occurs in the form of white branny scales; in some cases the epidermis peels off in large flakes or, more rarely, complete molds of the hands, fingers, or toes are cast off. During the desquamative stage the disease is believed to be most contagious. The throat and tonsils are dark red and swollen, the latter sometimes covered with a yellowish secretion. The tongue is at first thickly covered with white fur, but this soon disappears, leaving a bright red, raw surface, studded with prominent papillae, giving rise

to the appearance known as 'strawberry tongue.' About the fifth day of the fever the disease begins to abate; the temperature falls, the rash fades, and convalescence is gradually established. In severe cases, however, the mental faculties are dulled, delirium is frequent, particularly toward night, and drowsiness, deepening to coma, supervenes. Death may occur at this point from exhaustion, or it may occur later from various complications. The principal of these are nephritis and otitis media (q.v.). The latter is set up by extension of the inflammation from the throat, and a resulting abscess of the middle ear, with rupture of the drum membrane and chronic otorrhoea, is set up. Both ears may be affected simultaneously, and in a young child permanent deafness or deaf-mutism may result. In violent inflammations of the middle ear the mastoid cells may be involved, and meningitis, abscess of the brain, or pyæmia from thrombosis of the lateral sinus leads to a fatal termination. Nephritis is usually first recognized during convalescence, while desquamation is going on. Some swelling of the face and feet may be noticed, and the urine is found to be scanty, high colored, and albuminous. Dropsy may become general and death supervene. The mortality in scarlatina may be low in mild epidemics, but in others rises to 30 or 40 per cent.

Scarlet fever presents very little characteristic pathology. While, from its course, symptoms, and pathology, unquestionably an infectious disease, it has as yet baffled all attempts to determine its specific micro-organism. The most characteristic lesion is that of the skin. This is a simple dermatitis. As a result of this dermatitis there is an infiltration of the papillae and layer just beneath with leucocytes. In some cases hemorrhages occur into the skin. This acute inflammation stimulates the proliferation of epithelium, and the more than normally rapid casting off of the surface cells constitutes the 'peeling' or desquamation so characteristic of the later stages of the disease. This appearance of the skin, while quite characteristic during life, is often very indistinct after death. Inflammations of the mucous membranes of the pharynx, larynx, tonsils, and bronchi are of almost constant occurrence. This inflammation may be simply catarrhal in character or, more rarely, is diphtheritic. Still more rarely it is of a gangrenous nature. Acute inflammation of the lymph nodes sometimes occurs. This may be of the nature of a simple hyperplasia with or without exudation, or the glands may go on to suppuration. The spleen is usually enlarged. Acute inflammation of the kidney is common, while inflammations of the pericardium and endocardium and of the lungs are not infrequent complications or sequelae. Whatever the specific organism of scarlet fever, it certainly has the effect upon the body tissues of rendering them much more susceptible than they normally are to infection by other pathogenic micro-organisms. The most common is a streptococcus infection causing croupous inflammations of the mouth and upper respiratory tract. It is probable that the inflammations of lymph nodes, the suppurative conditions which frequently occur, the pneumonia, pericarditis, endocarditis, etc., are usually the result of a secondary infection by pyogenic micro-organisms. The Klebs-Loeffer bacillus or bacillus of true diphtheria is sometimes present in scarlet fever.

of the patient is that of fevers in general. Isolation is necessary. A quiet rest, liquid diet, and a cool room should be provided. The patient should be kept down by means of appropriate cooling drinks; cold sponging, or bathing, the action of the kidneys and skin is promoted by these measures and by the administration of diuretic medicines. The strength is supported by frequent liquid feedings and by giving suitable amounts of whisky or brandy. Antiseptic sprays and douches help to prevent throat infection through the Eustachian tubes to the ears, and render the patient more comfortable. During the period of desquamation the body should be washed night and morning with soap and warm water, and in the intervals smeared or rubbed with carbolized oil or ointment to prevent particles of epithelium from being carried off into the atmosphere bearing contagion with them. At least six weeks should elapse before the patient is allowed to mingle with his fellows. Treatment of the principal complications of scarlatina is considered under *NERVITIS* and *OTITIS MEDIA*.

SCARLET LETTER, THE. A novel by Nathaniel Hawthorne (q.v.).

SCARLET SNAKE. A brilliant red snake (*Oseola chapsodora*) marked with jet-black, white-bordered rings, dwelling in the Southern United States; it is allied to the milk-snake.

SCARLETT. SIR JAMES YORKE (1799-1871). An English general. He was the second son of Sir James Scarlett, Baron Abinger, was educated at Trinity College, Cambridge, entered the army, was gazetted major to the Fifth Dragoon Guards in 1830, and commander of the regiment in 1840. When the war with Russia broke out he was given command of the Heavy Brigade and fired his first shot before Sebastopol in 1854. During the battle of Balaklava, on October 25th, Scarlett, receiving news of an attack from the Russians, moved on to Kadiköi, where he was surprised by the enemy, 2000 strong. In order to save his troops from annihilation, Scarlett led 300 of his men up the hill into the centre of the Russian ranks, and, supported a little later by 400 of the remaining squadrons, broke through and scattered their forces. Later in the day Lord Lucan prevented him from making a second charge with his brigade. It was on this occasion that the Light Brigade made its celebrated charge. Scarlett was promoted major-general and made K.C.B. for his services at Balaklava. In 1855 he succeeded Lord Lucan as commander of the British cavalry in the Crimea and did notable work there breaking in the recruits. At the close of the war he was given the command of the Aldershot camp, which he retained until his retirement from active service in 1870.

SCARLET TANAGER, or FIRE-BIRD. See *TANAGER*; and *Colored Plate of Song Birds*.

SCARPE. The interior slope of a ditch. See *Fortification*; *Redoubt*.

SCARPA, skär'pä, ANTONIO (1747-1832). An Italian anatomist, born at Motta, near Treviso. He was educated at Padua; in 1772 he was appointed professor of anatomy in Modena, in 1783 at Pavia, where in 1814 he became director of the faculty of medicine. He became one of the greatest clinical surgeons in Europe. Perhaps Scarpa's greatest achievement was to demon-

strate that the heart was supplied with nerves. He died in Pavia after being blind for many years. 'Scarpa's triangle' is bounded by the adductor longus, the sartorius, and the crural arch. It is so named because Scarpa first tied the femoral artery in it for popliteal aneurism.

SCARPANTO, skär'pän-tō (Lat. *Carpathus*, Gk. *Κάρπαθος, Karpathos*). An island of the Ægean Sea belonging to Turkey, situated midway between the islands of Rhodes and Crete (Map; Turkey in Asia, B 5). It is 31 miles long, 8 miles in extreme breadth. Area, 126 square miles. It has bare mountains, reaching a height of 4000 feet. There are ruins of towns in several places. Population, about 8000, mostly workers in wool. Chief town, Aperi.

SCARPE. In heraldry (q.v.), a diminutive of the bend sinister.

SCARRON, skär'rōn', PAUL (1610-60). A French realistic novelist and burlesque humorist, born in Paris. His well-to-do father was bigoted, his step-mother cruel. One induced him to take orders, the other cheated him of his inheritance. He was educated for the Church. He had a gay youth, was a welcome guest both of the aristocratic salons and of the less prim Marion DeLorme and Ninon de l'Enclos. Then he was sent to Le Mans, was taken by his bishop to Rome (1635), and made canon (1636). Symptoms of nervous disease now appeared and made him from 1638 till death a constant invalid and an intense sufferer. "My shins and thighs," he says, "first made an obtuse angle, then a right angle, and at last an acute one. My thighs and my body make another, and since my head bends over on my stomach, I am shaped quite like a Z." In this plight and having to earn his bread, Scarron was taken to Paris, and from 1645 to 1655 he wrote comedies and farces that made him for the moment the unquestioned leader in this field and also gave him intimate knowledge of the theatrical life of the time. Then in 1646 he refreshed his memories of provincial life at Le Mans and began to weave the comic aspects of province and stage into his *Roman comique* (1651-57), many episodes of which have both brilliancy and humor. Soon after the appearance of the first volume (1651) Scarron prepared to emigrate to America, but while recruiting colonists for that end he met Mlle. d'Aubigné, who had just returned thence empty of purse but full of wit and beauty. Mingled sentiment and pity led to their marriage (1652), and there was no more thought of America. Under the care of her, who was to win the love of Louis XIV. as Madame de Maintenon, Scarron lived eight years, editing a comic journal, writing dramas, a travesty of Vergil (1658), and eight remarkable *Nouvelles magi-comiques* (1659), which furnished models for Molière's *Tartufe* and Harpagon, a plot for his *Ecole des femmes*, and for Sedaine's *Gogeuze imprévue*, and a title for Beaumarchais's *Borbier de Séville*. Scarron's poetry and drama introduced Spanish and Italian burlesque into France. His fiction did the same; but it marked also an advance in natural character-drawing and in the technique of rapid narration. The popularity of the *Roman comique* was immediate and perennial. It was repeatedly reprinted and many times continued, best by Offray. Good modern editions are by Fournel (Paris, 1857) and France (ib., 1881).

Scarron's *Œuvres* were collected in 10 volumes (Paris, 1737) and in 2 volumes (ib., 1877); and the dramatic works in 1 volume (ib., 1879). There is a translation, *The Comical Works of Scarron*, with an introduction by Jusserand (London, 1892). Consult: Morillot, *Scarron et le genre burlesque* (Paris, 1888); Le Breton, *Le roman au XVIII^e siècle* (ib., 1890); Körtig, *Geschichte des französischen Romans im XVII. Jahrhundert* (Oppeln, 1891); and Peters, *Scarron und seine spanischen Quellen* (Erlangen, 1893).

SCARTAZZINI, skär'tä-tsé-ne, JOHANN ANDREAS (1837-1901). A Swiss theologian and a Romance scholar, born at Bondo (Grisons) and educated at Basel and Bern. He preached for a time near Bern, then taught Italian in the cantonal school of Chur, was pastor at Soglio from 1875 to 1884, and spent his last years at Fahrwangen (Aargau). He edited *Tasso* (2d ed., 1882) and *Petrarch* (1883), but his great contribution to Italian literature was his work on Dante, which includes *Dante Alighieri, seine Zeit, sein Leben und seine Werke* (1869, 2d ed., 1879), *Abhandlungen über Dante* (1880), *Dante in Germania* (1880-83), the excellent *Dante, eine ed. opère* (1883, and 1894 under the title *Dantologia*), an edition of the *Divina Commedia* (1874-82), *Prolegomeni* (1890), *Dante Handbuch* (1892), an edition of the *Commedia* (1893, 2d ed., 1895), the *Enciclopedia Dantesca* (1896-98), *Dante als Geistesbild* (1896), and *Concordanza della Divina Commedia* (1901).

SCAUP (from Gerl. *skälpe-hana*, scamp-duck). Any of several ducks of the Northern Hemisphere, of the same genus (*Anthya*) as that of the canvas-back and red-head, and having similar habits. The typical scamp is that of the Old World (*Anthya marila*), represented in North America by a variety (*macræta*), commonly called 'blue-bill,' 'broadbill,' or 'black head.' It is 18 inches or more in length. The male has the head, neck, and upper part of the breast and back black; the sides of the neck glossed with rich green; the back white, spotted and striped with black lines; the speculum white. The female has brown instead of black, and old females have a broad white band around the base of the bill. The flesh of the scamp-duck is tough, and has a strong fishy flavor.

BILL OF A SCAMP.

Closely allied but smaller is the lesser scamp, or 'little blue-bill,' etc. (*Anthya affinis*), which has the head glossed with purple instead of green. A third species is the ring-necked duck or 'moon-bill' (*Anthya collaris*), in which the brown of the fore parts is interrupted by a pale band about the neck. All these breed in the north, but are abundant in the spring and fall throughout the United States on the larger bodies of fresh water, as well as along the coast.

SCEATTA. A small coin, usually of silver, but sometimes of gold, used in Britain during the seventh century, the earliest type of coin

known there after those of the Roman occupation.

SCENES OF CLERICAL LIFE. A group of stories by George Eliot (1858), originally published in *Blackwood's Magazine*, comprising her first attempts in fiction and depicting faithfully a society which she knew well.

SCENIC AND HISTORIC PRESERVATION SOCIETY, AMERICAN. A national organization for the protection of American scenery and the preservation of American landmarks, incorporated by the New York State Legislature in 1895. In 1897 the State of New York, at the instance of the society, bought 33 acres of land around Stony Point, the scene of Gen. Anthony Wayne's exploit in 1779, and intrusted the improvement of the property to the society. In 1900 the State bought about 35 acres at the head of Lake George, in New York State, made famous by events during the French and Indian and Revolutionary Wars, which it has erected into a State reservation. In 1903 the society secured a favorable action from the New York City Government for the preservation of Fraunce's Tavern, Manhattan, the scene of Washington's farewell to his officers. These illustrate the scope of the society's operations.

SCENT GLANDS (from OE., Fr. *scatur*, to feel, perceive, smell; from Lat. *scatur*, to perceive by the senses; connected with Goth. *scaps*, journey, OHG. *stanan*, to strive after, Ger. *sinnen*, to perceive). A large and diversified group of glands found in many animals, generally opening into the terminal portion of the intestine near the anus. The secretion of these glands is nearly always repulsive to man, at least, and in some cases, as, notably, that of the skunk, is employed as a means of defense. The term is more strictly applied to the glands occurring in many carnivora and rodents, which consist of follicles that empty their secretion into small sacs with muscular walls and narrow orifices, placed one on each side of the anus. The civet cat has an anal sac on each side of the vent, as well as two other sacs opening by a common outlet in front of the vent. From the latter sacs is excreted the substance known as civet, (see CIVET), which is employed in the composition of perfumes. In the beaver analogous glands are found in both sexes near the genital orifices, in the form of large pyriform sacs, called preputial glands, which furnish the castoreum of commerce. From castoreum is prepared the castor of the Pharmacopœia.

SCEPTRE (Lat. *scepterum*, from Grk. *σκήπτρον*, *sképteron*, staff, from *σκηπτειν*, *sképtein*, to prop, to throw; connected with Skt. *ksep*, to throw). A staff of some precious material serving from time immemorial as the most notable symbol of royalty. Both in the Old Testament and in Homer, the most solemn oaths are sworn by the sceptre, and Homer speaks of the sceptre as an attribute of kings, princes, and leaders of tribes. The sceptre was in very early times a truncheon pointed with gold or silver studs, Ovid speaks of it as enriched with gems, and made of precious metals or ivory. The sceptre of the Kings of Rome, which was afterwards borne by the consuls, was of ivory and surmounted by an eagle. Some sceptres are surmounted by a cross, by a hand in the act of benediction, or by some suitable

works include the *Henri de Lis* of France, the portrait of the English monarch in cruciform armor, and dates from the days of Charles I.

SCHACK, shak, ADOLF FRIEDRICH, Count (1815-94). A German poet and critic, born near Schwedt. He studied law and entered the service of the Grand Duke of Mecklenburg. During a stay in Berlin Schack perfected himself in Sanskrit, Arabic, and Persian. More scholar than poet, Schack was at his best in his translations, especially the *Spanisches Theater* (1845), *Firdusi* (1865), *Strophica des Omar Chayyam* (1878), *Oriental and Occidental* (1890), and *Englische Dramatiker* (1893). His original verse includes *Gedichte* (1867), the romance *Eberhartig* (1876), *Nachte des Orients* (1874), and *Kunstspiele* (1891). As a critic his work was distinctly excellent, his chief titles being *Geschichte der dramatischen Litteratur und Kunst in Spanien* (1845-55), *Poesie und Kunst der Araber in Spanien und Sizilien* (1865, 2d ed., 1877), and the historical works *Die Normannen in Sizilien* (1889) and *Mazzini und die italienische Freiheit* (1891). Schack's autobiography appeared in 1887 under the title *Ein halbes Jahrhundert* (Stuttgart, 1894), his collected works in 1891 (2d ed.), and his posthumous poetry, edited by Winkler, in 1896. Consult the sketches by Rogge (Berlin, 1883), Bremning (Bremen, 1885), and Berg (Frankfort, 1896).

SCHADOW, shādō, FRIEDRICH WILHELM (1789-1862). A German historical and religious painter. He was the virtual founder of the old Düsseldorf school, born in Berlin, the son of the following, studied painting under Weitsch, and in 1810 proceeded to Rome, where he joined the Nazariites (see PRE-RAPHAELITISM), and became a convert to Catholicism. His part in their joint frescoes in the Casa Bartholdi (now in the National Gallery, Berlin) was "Jacob with Joseph's Coat" and "Joseph in Prison." These are the most important works of his Roman period, although his Madonnas and portraits show a greater technical skill, upon the basis of which he was called in 1819 to be professor in the Berlin Academy. His principal work at Berlin was a large "Bacchanal," upon the ceiling of the Royal Theatre; but he also painted a number of Madonnas and other religious subjects and "Poesy," one of his best easel pictures.

His high success as a teacher was the cause of his appointment as director of the Düsseldorf Academy. He entirely reorganized the instruction there, and it was to his teaching that the success and productivity of the Düsseldorf school (q.v.) was chiefly due. Unlike his predecessor Cornelius, he practiced oil painting, rather than fresco, placing greater weight upon color. He favored the historical and the religious picture and was much opposed to the genre and landscape afterwards practiced by his pupils. His principal production during this period was "The Wise and the Foolish Virgins" (1837, Städels Institute, Frankfurt); among other religious paintings are the "Four Evangelists" (Werdersche Kirche, Berlin) and "Christ and His Disciples at Emmaus" (National Gallery, ib.).

In 1840 he went to Italy, whence he returned more zealous in religion and uncompromising in only doing purely religious painting. His latest

works include "Heavenly and Earthly Love," "Piety and Vanity in Their Relation to Religion," and allegorical representations of "Heaven," "Purgatory," and "Hell," after Dante. In 1859 he resigned the directorship of the academy. He died at Düsseldorf. As an author he is well known by his lecture, *Ueber den Einfluss des Christentums auf die bildende Kunst* (Düsseldorf, 1843), and the biographical sketches, *Der moderne Vasari* (Berlin, 1854). Consult Hübner, *Schadow und seine Schule* (Bonn, 1869), and the authorities referred to under DÜSSELDORF SCHOOL OF PAINTING.

SCHADOW, JOHANN GOTTFRIED (1764-1850). An eminent German sculptor, who inaugurated a new epoch in plastic art, marked by the return to the simple truth of nature and to antique models, after a period of mannerism. Born in Berlin, May 20, 1764, the son of a tailor, he became the pupil of Tassaert in 1776 and simultaneously studied drawing at the Academy. Married in 1785, he went to Italy, and was powerfully impressed at Florence by the works of Giovanni da Bologna and Michelangelo, yet more deeply still in Rome by the antique sculptures in the Vatican and the Capitol, which he studied with indefatigable zeal. Having worked temporarily in the studio of Trippel, he found the intercourse with Canova more instructive. In 1786 he won the first prize in the Concorso di Palestra, with the group in terra-cotta "Andromeda Delivered by Perseus," and upon his return to Berlin was elected a member and one of the four rectors of the Academy, and appointed Court sculptor, in 1788. Schadow's most important works date from the next two decades, and in their unpretending simplicity give the full impression of life and individual truth. Chronologically, they include the "Hercules Slaying the Centaur Eurytion" (1789), on the Hercules Bridge; the "Monument of Count von der Mark" (1789-91), in the Dorotheenstadt Church. A number of reliefs of antique subjects, in the various state rooms of the royal palace, belong to the same period. Then followed the statue of "Frederick the Great" (1793) at Stettin, that of "Ziethen" (1794) and that of "Prince Leopold of Anhalt-Dessau" (1800), both at Gross-Lichterfelde (replicas in bronze, Wilhelmplatz, Berlin). For the Brandenburg gate he modeled the "Quadriga of Victory" (1789-94), the statue of "Mars" (1794), and the 16 metopes of the "Combat Between the Centaurs and Lapithæ" (1794). Of his perfect success in rendering female grace and beauty, the exquisite group of "Crown Princess Louise and Her Sister" (1795-97, Royal Palace, Berlin) is sufficient proof. A splendid specimen of his treatment of the nude form is the life-size reclining figure of a woman (1797), long designated erroneously as the "Nymph Salmacis" by Thorwaldsen. Intimate characterization distinguishes a bronze group of "Frederick the Great with His Greyhounds" (1816), at Sans-Souci. Schadow concluded his monumental plastic work with the statues of "Blücher" (1819), at Rostock, and "Luther" (1821), at Wittenberg, and his last piece in marble was the statnette of a "Girl Reposing" (1826), in the National Gallery, Berlin. Since 1792 he had also fashioned about a hundred portrait busts of the Hohenzollern and other prominent personages, among them those for

the Walhalla, near Regensburg, including "Frederick the Great," "Charlemagne," "Henry the Fowler," "Copernicus," "Kant," "Wieland," and others, and that of "Goethe" (1816), in the National Gallery. Due credit should be given also to his numerous drawings, ranking with the best of his time, more than 1000 of which are preserved at the Berlin Academy. He published: *Wittenbergs Denkmaler der Bildnerer, Baukunst und Malerei* (1825); *Lehre von den Knochen und Muskeln*, etc. (1830); *Polyklet, oder von den Muscen des Menschen nach dem Geschlecht und Alter* (1834; 5th ed. 1886); and its sequel *Nationalphysiognomien*, etc. (1835; 2d ed. 1867), each with 30 plates. From 1816 to his death, January 28, 1850, he was director of the Berlin Academy, highly gifted and successful as a teacher.

His son and pupil, RUDOLPH (1786-1822), born in Rome, returned thither from Berlin in 1811, and under the influence of Thorwaldsen followed the lines of classicism. He was most successful with genre figures, such as the "Sandal-Binder" (1817), in the Glyptothek at Munich, which also contains his portrait bust of "Vittoria Caldoni" (1820). Most of his works found their way into England. His principal composition, the heroic group of "Achilles Defending Penthesilea" (modeled 1821), was executed in marble by Emil Wolff, for the royal palace in Berlin. Consult: Eggers, in Dohme, *Kunst und Künstler* (Leipzig, 1886); Donop, in *Allgemeine deutsche Biographie*, xxx. (ib., 1890); and Bode, *Geschichte der deutschen Plastik* (Berlin, 1887).

SCHAFARIK, shō'färik-zhék. A Slavic philologist. See ŠAFARIK.

SCHÄFER, shä'fēr, EDWARD ALBERT (1850—). An English physiologist, born in London and educated in University College. He became assistant professor of physiology in 1874, and was Jodrell professor from 1883 to 1899, when he was named professor of physiology in Edinburgh. Besides valuable papers on muscular structure, on the chemistry of blood proteins, on absorption, and on the rhythm of voluntary contraction, he wrote *A Course of Practical Histology* (1877), and *Essentials of Histology* (1885), and edited Quain's *Elements of Anatomy* (with G. D. Thane, 8th, 9th, and 10th editions), and an *Advanced Text-Book of Physiology by British Physiologists* (1898).

SCHÄFER, KARL (1844—). A German architect, born and educated at Cassel, where he taught in the Polytechnic (1868-70). In 1870 he became university architect in Marburg, whence he removed in 1878 to Berlin. There he was docent in the School of Technology and in 1884-94 professor of mediæval architecture. In 1894 he was appointed to a chair of mediæval architecture in the Karlsruhe Institute of Technology. Schäfer planned the very successful buildings of Marburg University, the Holzhausen Castle near Kirehhain, and the Equitable Building in Berlin. He wrote *Ornamentale Glasmalereien des Mittelalters und der Renaissance* (1881-88, with Rosentuscher), *Holzarchitektur Deutschlands vom 14. bis 18. Jahrhundert* (1884-88), and *Die mustergültigen Kirchenbauten des Mittelalters in Deutschland* (1892 sqq.).

SCHAFF, shä'f, PHILIP (1819-93). A distinguished Church historian. He was born at Chur, Switzerland, January 1, 1819; studied at

Stuttgart, Tübingen, Halle, and Berlin; traveled in 1841 as private tutor in France, Switzerland, and Italy, and returned to Berlin and lectured on theology 1842-44. On invitation from the German Reformed Church he came to America in 1844 and became professor of theology in the German Reformed Theological Seminary at Mercersburg, Pa. In 1864 he removed to New York City and was secretary of the New York Sabbath Committee till 1869. He lectured at Andover on Church history 1862-67. In 1870 he became connected with Union Theological Seminary first as professor of theological cyclopedia and Christian symbolism (1870-71), next of sacred literature (1874-87), and finally of Church history (1887-93). He died in New York City. His most important works are his *History of the Christian Church* (1858-90), his translation, adaptation, and editing of Lange's *Commentary on the Holy Scriptures* (1864-86), *The Schaff-Herzog Encyclopædia of Religious Knowledge* (3d ed. 1891), and his collecting and introducing of *The Creeds of Christendom* (1877-84). His deepest desire was for the union of Christendom, and his last speech was in its behalf at the Chicago Parliament of Religions (1893). He was one of the founders of the American branch of the Evangelical Alliance and was long its honorary secretary. Consult his *Life* by his son, D. S. Schaff (New York, 1897), which contains a full list of his publications.

SCHÄFFER, shä'fēr, JULIUS (1823-1902). A German musician, born at Krevese, in the Altmark. He studied theology, and later philosophy, at Halle and in Leipzig, but upon becoming intimate with Robert Franz, and through him coming in contact with Schumann, Mendelssohn, Gade, and others, he gave himself up entirely to music. In 1850 he studied under Dehn at Berlin, and five years afterwards became musical director to the Grand Duke at Schwerin, where he founded and conducted the "Schloss-kirchenchor." In 1860 he became musical director at the university and conducted at the Singakademie, Breslau, having succeeded Reinecke. Among his works are three books in defense of Franz's "additional accompaniments" to scores by Bach and Handel, namely: *Zwei Beurtheiler von Dr. R. Franz: Fr. Chrusander in seinen Clavierausgaben zur deutschen Handl.-Ausgabe*; and *R. Franz in seinen Bearbeitungen aller Vokalwerke*; excellent choral books; songs and part-songs.

SCHAFFHAUSEN, shä'f-hou'zen. The northernmost canton of Switzerland, bounded by the Grand Duchy of Baden, except on the southwest, where the Rhine separates it from the cantons of Zurich and Thurgau (Map: Switzerland, C 1). Area, 114 square miles. The canton forms a part of the Rhine valley. In the northern part are mountainous spurs from Baden. Numerous streams flow toward the Rhine and render even the higher portions of the region cultivable. The products include cereals, vegetables, and wine, and domestic animals of Swabian and Swiss breeds are raised. The manufacturing industries are centred at Schaffhausen (q.v.), the capital. Schaffhausen is one of the most democratic cantons of Switzerland. Its constitution, dating from 1876, and modified in 1895, provides for a legislative assembly (Grosser Rath) elected for four years, at the rate of one

city of 300 inhabitants, and an elected council of 5 members. The initiative and referendum are in force. Schaffhausen has no representatives to the Federal Council. Population, in 1900, 11,511, principally German speaking Protestants.

SCHAFFHAUSEN. The capital of the canton of the same name in Switzerland, situated on the Rhine at an altitude of 1295 feet, about 25 miles north of Zurich (Map: Switzerland, C. 13). The town is quaint and contains many gabled houses dating from the sixteenth and the seventeenth centuries. There are an interesting early Romanesque basilica dating from the eleventh century, the seventeenth-century town hall, the museum with the town library, and the Infirmerium, containing a theatre, a picture gallery, a concert hall, etc. Above the town rises the massive sixteenth-century tower of Munot, with its fine terrace, and at the western end of the town lies the Eisenstau Promenade. Schaffhausen is connected by two bridges with the village of Feuerthalen on the opposite bank of the Rhine. The manufactures are of wide range, including various iron and steel products, scientific instruments, machinery, watches, yarns, textiles, pottery, etc. Population, in 1900, 15,400, mostly Protestants. Schaffhausen is mentioned as a city in the twelfth century and soon after became a free city of the Empire. It joined the Swiss Confederation in 1591. Two miles below Schaffhausen are the famous Falls of the Rhine, one of the grand scenic features of Central Europe. In three leaps over the rough ledge the river here descends nearly 100 feet.

SCHAFFLE, sheff'le, ALBERT (1831-1903). A German economist and sociologist. He studied theology at Tübingen, and from 1850 to 1860 he edited the *Schwarzbücher Merkur* at Stuttgart. Professor of political economy at the University of Tübingen (1860-68), he subsequently became a professor at the University of Vienna. From February until October of 1871 he was Austrian Minister of Commerce. Upon the overthrow of the Ministry he went to Stuttgart, where he devoted himself to literary work. Among his best known publications are *Die Grundlagen des Sozialismus* (1874) and *Die Ausschliesslichkeit der Sozialdemokratie* (1885). His *Bau und Leben des sozialen Körpers* (1875-78, new ed. 1896) undertakes to construct a thoroughgoing sociological system. His other important works are *Die Nationalökonomie* (1861), a third edition of which appeared in 1873 under the title *Das gesellschaftliche System der menschlichen Wirtschaft* (1873), and *Kapitalismus und Sozialismus* (1870).

SCHAFFHÄUTL, shäff'hoi-'tl, KARL EMIL VON (1803-90). A German geologist and physicist, whose early writings on neonites and on the preparation of steel and iron were under a pseudonym, the Latinized equivalent of his name, Pellissow. He was born in Ingolstadt, studied mathematics and mineralogy at Landshut and English methods of puddling and forging iron at Sheffield and in 1843 became professor of geology, mineralogy, and mining in Munich, where, six years afterwards, he was appointed librarian of the university. His most important work was the introduction into Germany of what he had learned at Sheffield. Schaffhäutl devised many mathematical

and physical instruments, of which his areometer, photometer, and phonometer are most valuable. Besides his writings on geology and physics, which appeared in English and German technical reviews, he published on the history of music, to which he especially devoted himself in his later years, *Ein Spaziergang durch die liturgische Musikgeschichte der katholischen Kirche* (1887), and *Abt Georg Josef Vogler* (1888).

SCHALCKEN, shälk'en, GONFRIED (1643-1706). A Dutch genre painter, born in Maastricht. He received his art training under Hoogstraten and in the studio of Gerard Dou. In 1699 he was in England and painted a portrait of William III, now in The Hague Museum (another copy in Amsterdam). But, excepting this and a few other portraits and some historical, mythological, and landscape studies, Schalcken produced small canvases with artificial light effects. Among these, mention may be made of "Old Woman Scouring a Pan," and "Soldier Giving Money to a Woman," in the London National Gallery; "Ceres Seeking Proserpine" and "Old Man Writing," at the Louvre; "Girl Blowing Out Taper," at Munich; "Girl Reading Letter," in the Dresden Gallery; and "Toiled by Candle," at The Hague, all with wonderfully mellow treatment and warm coloring. His sister, MARIA, and his nephew, JAKOB (1684-1722), painted so much in Godfried's manner that their work is often confused with his.

SCHALKE, shäl'ke. An industrial commune of Prussia, 7 miles north of Essen, with important coal mines, iron and steel works, machine shops, coke ovens, tin-plate works, chemical factories, glass and mirror works. Population, in 1900, 26,077.

SCHALL, shäl, JOHANN ADAM VON (1591-c.1665). A celebrated Jesuit missionary to China. He was born of noble family at Cologne in 1591, entered the Society of Jesus in 1611, and went as a missionary to China in 1617. He succeeded not only in forming a flourishing mission, but was ultimately invited (1631) to the Imperial Court at Peking, where he was intrusted with the compilation of the calendar and the direction of the public mathematical school, being himself created a mandarin. Through this favor with the Emperor Schall obtained an edict which authorized the building of Roman Catholic churches and the liberty of preaching throughout the Empire, and in 14 years the Jesuit missionaries in the several provinces are said to have received into the Church 100,000 proselytes. On the death of this Emperor (1661), however, a change of policy fatal to the prospects of Christianity took place. Schall was thrown into prison and sentenced to death, and although released on May 18, 1665, he had suffered so much that he died soon after. For a portrait of him in the costume of a mandarin, see illustration under COSTUME, ECCLESIASTICAL. Consult Platzweg, *Lebensbilder deutscher Jesuiten in auswärtigen Missionen* (Paderborn, 1882).

SCHAMYL, shä'm'il. A patriot chief of the Caucasus. See SHAMYL.

SCHANDORPH, shän'dörp (properly SKAMDRUP), SOPHUS (1837-1901). A Danish poet and novelist, who excelled in portraying the life of the Danish middle and lower classes. Born and educated in Ringsted, he studied first theology and then the Romance languages. He possessed a keen sense of humor and remarkable

powers of observation. One of his best novels is *Smaafolk* (1880), the story of a peasant girl beset by the temptations of a large city. His other works include *Uden Midtpunkt* (1878), *Thomas Fris' Historie* (1881), *Skarjogades bórne* (1884), *Det gamle apothek* (1885), *Fra Isle de France og fra Sorø* (1888), and *Stillehus Folk* (1892).

SCHANZ, shänts, GEORG (1853--). A German economist, born in Grossbardorf and educated in Munich, Würzburg, and Strassburg. He was employed in the Statistical Bureau in Munich, became professor at Erlangen in 1880, and in 1882 was called to the chair of economies in Würzburg. In 1884 he became editor of the *Finanzarchiv*, and it is with finance and the history of commerce that his works especially deal. He wrote: *Die deutschen Geweblereiche* (1877); *Englische Handelspolitik gegen Ende des Mittelalters* (1881); *Beiträge zur Frage der Arbeitslosenversicherung* (1895-1902).

SCHANZ, MARTIN VON (1842--). A German classical philologist, born at Uechtelhausen, in Bavaria. In 1875 he became professor of classical philology in the University of Würzburg. His studies were chiefly directed to Plato, historical Greek syntax, and the history of Roman literature. His most important published works are: *Beiträge zur vorsokratischen Philosophie* (1867); *Studium zur Geschichte des Platonischen Textes* (1874); *Platonis Opera* (1st critical ed. 1874); and numerous editions of separate dialogues. After 1882 he edited *Beiträge zur historischen Syntax der griechischen Sprache*. His *Römische Literaturgeschichte* (1898, et seq.) is important for its comprehensive survey of every field, its objectivity and impartiality, and the excellence of its characterizations.

SCHÄPER, shä'për, FRITZ (1841--). A German sculptor, born at Altleben, Prussian Saxony; pupil of the Berlin Academy and of Albert Wolff; instructor at the academy in 1875-90 and elected a member of it in 1880. Besides some figures for the "War Monument" at Halle, he produced the statues of Bismarck (1879) and Moltke (1881, both at Cologne), Gauss (1880, Brunsweck), Lessing (1881, Hamburg), Krupp (1889, Essen), Liebig (1890, Giessen), Blicher (1893, Caub), the monuments to Goethe (1880, Berlin) and Luther (1890, Erfurt); the equestrian statue of William I. (1901, Aix-la-Chapelle); and an heroic-size "Victory" (1885, Arsenal, Berlin). To the adornment of Sieges-Allée in Berlin he contributed the statue of the Great Elector (1901).

SCHARF, shärf, JOHN THOMAS (1843-98). An American antiquary and historian, born in Baltimore, Md. He served in both the Confederate army and navy, was several times wounded, and once narrowly escaped being put to death as a spy. Later he engaged in journalism and in Baltimore was at different times editor of the *Evening News*, *Sunday Telegram*, and *Morning Herald*. He devoted much attention to history, and made a collection of many thousands of documents, pamphlets, and other historical material, which he gave in 1891 to Johns Hopkins University. His publications include: *Chronicles of Baltimore* (1874); *History of Maryland* (3 vols., 1879-80); *History of Baltimore City and County* (1881); *History of Western Maryland* (2

vols., 1882); *History of Philadelphia* (3 vols., 1884); *History of the Confederate State Navy* (1887); and *History of Delaware* (1888).

SCHARNHORST, shärn'hörst, GERHARD JOHANN DAVID VON (1755-1813). A Prussian general, founder of the modern Prussian military system. He was born in Hanover. He entered the military service of his native State in 1778, was teacher in the artillery school of Hanover about 1780, and was engaged in the campaigns in Flanders in 1793-95. In 1801 he was called into the Prussian service and became director of the Prussian military school. He served in the field in the disastrous campaigns of 1806-07, and was then made president of the commission charged with the reorganization of the Prussian army and head of the War Department. Working in harmony with the other regenerators who came to Prussia in her need, he accomplished this in spite of the distrust and opposition of the old-time Prussians. Universal service was not secured until his death, but he laid down the principles and prepared the way for its adoption. Enrollments of foreigners were abolished, corporal punishments were limited to flagrant cases of insubordination, promotion for merit was established, and the military administration organized and simplified. The organization of the *Landwehr* or reserve was begun. So promptly were the results of this work seen that the Prussian army, which had been so ineffective before Tilsit, was able to play an important part in the final campaign against Napoleon. Scharnhorst was wounded in the battle at Grossgörschen May 2, 1813, and died at Prague June 28th. Consult his biography by Klippel (3 vols., Leipzig, 1869-71), which is devoted especially to his reforms and their results.

SCHARWENKA, shär-vën'kä, PHILIPP (1837--). A German pianist and composer, born in Saunter, Posen, and brother of Xaver Scharwenka. He was educated at the Posen Gymnasium, and in 1865 was enrolled as a pupil of the Kullak "Neue Akademie der Tonkunst" in Berlin, where he was a special pupil of Wüerst and H. Dorn. In 1870-81 he taught theory and composition at the academy and then took up a similar position at his brother's conservatory. His compositions are regarded highly and include many charming numbers for orchestra, pianoforte, violin, cello, and voice; the choral works, *Hochstimm*, Op. 41, and *Sakuntala*, for solo and orchestra; two symphonies; *Arkadische Suite*; and a festival overture, *Draper-Tanzweise*, for chorus and pianoforte.

SCHARWENKA, XAVER (1850--). A German composer and pianist, born at Saunter. He was educated at Kullak's Academy in Berlin under Kullak and Wüerst. In 1871 he began a series of very successful tours throughout Europe and America, and in 1881 he established his conservatory in Berlin. Ten years later he removed to New York City and became director of the Scharwenka Conservatory there. His Berlin school meanwhile amalgamated with that of Karl Klindworth, and in 1898 he returned to Germany and assumed charge of the Klindworth-Scharwenka Conservatory. His works include the opera *Matoswintha* (1896), a symphony in C minor, and considerable chamber and pianoforte music. Perhaps

of the city, which has been since

SCHA-SBURG, shā'sbōrk. Hung. *Szeges* (1791). A royal free city, and the capital of the county of Gross-Kökei (Nagy-Küküllő), Hungary, on the Great-Kökei, 80 miles by rail west of Kronstadt (Map: Hungary, J 3). The city has a Protestant gymnasium, with a library and museum, and a Catholic normal school. It is noted as the scene of the defeat of the Hungarian army by the Russians, July 31, 1849, the celebrated poet Petöfi (q.v.) being among the Hungarian dead. Population, in 1900, 10,857.

SCHÄUFELEIN, shoif'fe-lin, HANS LEONHARD (c.1480-1540). A German painter, born in Nuremberg. He became the pupil and assistant of Dürer, whom he imitated. His treatment of drapery is peculiarly good, but his own manner is often rather careless. His best works, apart from drawings for woodcuts, among which those illustrating the *Thuerbank*, his designs for a wedding dance, and cuts for the Bible are most important, are the following paintings: "The Dying Virgin" (two subjects), "Coronation of the Virgin," "Christ on the Sea of Galilee," "Crowned with Thorns," "On the Cross," and "Mount of Olives," in the Munich Pinakothek; a "Visitation," in the Dublin Gallery; and two portraits belonging to the Duke of Northumberland.

SCHAUFFLER, shouff'ler, WILLIAM GOTTLIEB (1798-1883). A Protestant missionary in Turkey. He was born at Stuttgart, Germany, and went with his parents at the age of six to Odessa, Russia. Having decided to become a missionary, after a brief visit to Turkey he came to America and after four years of study at Andover was ordained in 1831 and sent by the American Board to Paris to study Arabic and Persian with De Saey, and Turkish with Prof. Kieffer. He went to Constantinople and preached in German, French, Spanish, Turkish, and English. By appointment of the British and Foreign and American Bible societies he devoted himself to the translation of the Bible into the Turkish language. He published an ancient Spanish version of the Old Testament, revised by himself, with the Hebrew original, in parallel columns, a grammar of the Hebrew language in Spanish, and a Hebrew and Chaldee lexicon of the Old Testament in the same language; also *Meditations on the Last Days of Christ*, discourses delivered in Constantinople (1837). He returned to America in 1877, and died in New York City. Consult his *Autobiography* (New York, 1887). His son, Rev. A. F. Schaufler, born in Constantinople, has been for many years a promoter of city missions in New York City.

SCHAUMBURG-LIPPE, shoum'bōrk lip'pē. A principality and constituent State of the German Empire, bounded by the Prussian provinces of Hanover and Westphalia and covering an area of 131 square miles (Map: Germany, C 2). Its surface is somewhat mountainous in the north and well wooded. Agriculture and gardening are pursued actively in the southern part, and coal is mined in the east. The chief manufacture is beer. The principality is represented by one member in the Bundes-rat and returns one deputy to the Reichstag. Population, in 1890, 100,000. In 1900, 131,200. Almost exclusively Protestant. Ruled by Lippe. The ruling dynasty was

founded in 1640 by a cadet of the Lippe family, who inherited the countship of Schaumburg. The State was created a principality in 1807. In 1866 it joined the North German Confederation and in 1871 became a member of the German Empire.

SCHECHTER, shēk'tēr, SOLOMON (1847-), A distinguished Jewish scholar. He was born at Fokshani, Rumania, and studied at Vienna and later at Berlin. Under the patronage of the Montefiore family he went to England, where his literary studies began. In 1892 he became reader in Rabbinic at Cambridge University. In 1894 he visited America to lecture at Gratz College, Philadelphia, upon "Some Aspects of Jewish Theology." His discovery in 1896 of a page of the Jewish original of Ecclesiasticius (*Ban-Sira*) led to a visit to Cairo to examine the Geniza (or store-chamber for disused books) of the Jewish synagogue, and he was enabled to bring back the whole collection, consisting of 80,000 pieces, which he presented to his university. Cambridge rewarded him with the degree of LL.D., and with the position of curator of Oriental literature. He also received the appointment to the Hebrew professorship at University College, London. In 1901 the Jewish Theological Seminary in New York was reorganized and endowed on condition of Dr. Schechter's becoming its president; he accepted the offer and came to New York in the spring of 1902. His best known work is his publication with Dr. C. Taylor of *The Wisdom of Ban-Sira* (1899), the fruits of the Geniza fragments. Other important works are *Abot de Rabbi Nathan* (1887), *Studies in Judaism* (1896), *Midrash-Hag-gadol* (vol. i., 1902), *Saad-gana* (1903).

SCHEEL, shāl, HANS VON (1839-1901). A German economist and statistician, born in Potsdam. He studied at Halle, Jena, and Berlin, in 1868 was appointed to the post of assistant to Hildebrand in the Statistical Bureau at Jena, taught at the Agricultural School at Proskau 1869-71, became professor at Bern in 1871, and Director of the German Statistical Bureau at Berlin in 1891. His works include *Socialismus und Kommunismus, Politische Oekonomie als Wissenschaft, Die Erwerbsbedingungen des Staats* (in Schönberg's *Handbuch*, 4th ed., 1896), *Die Theorie der sozialen Frage* (1871), *Eigentum und Erbrecht* (1877), *Progressive Besteuerung* (1875), and a version of Ingram's *Present Position and Prospects of Political Economy* (1879), and publications on statistics. Consult Kollmann, *Hildebrands Jahrbuch* (1902, vol. lxxviii., pp. 577-97).

SCHEELE, shā'le, CARL WILHELM (1742-86). An eminent Swedish chemist, born at Stralund. In 1767 he settled at Stockholm as an apothecary, and in 1770 removed to Upsala. It was during his residence at Upsala that he carried on those investigations in chemical analysis which proved so fruitful in important and brilliant discoveries. In 1777 he removed to Köping. The chief of his discoveries were tartaric acid (1770), chlorine (1774), baryta (1774), oxygen (1774, independently of Priestley), and glycerin (1784). In experimenting on arsenic he discovered the arsenite of copper, which is known as a pigment under the name of *Scheele's green* or *mineral green*. In 1782 he succeeded in obtaining, for the first time, hydrocyanic acid in a separate form. The mode and results of his various investigations were communicated from time to time, in

the form of memoirs, to the Academy of Stockholm, of which he was an associate. A complete edition of his works was published by Hermsstädt (Berlin, 1793). Consult: Hays, *The Life Work of Carl Wilhelm Scheele* (New York, 1884); Cap, *Scheele, chimiste suédois* (Paris, 1863); Thorpe, "Scheele," in *Nature* for 1892; Nordenskjöld, *Nachgelassen Briefe und Aufzeichnungen von Carl Wilhelm Scheele* (Stockholm, 1892).

SCHEELE, KNUT HENNING GEZELIUS VON (1838—). A Swedish Lutheran theologian, born in Stockholm and educated at Upsala. There he became docent in 1865 and professor in 1879, and in 1885 was made Bishop of Wisby. In 1893, on the tercentenary of the Upsala decree, he was the King's representative to the United States, and in 1901 represented his university and nation at the Yale Bicentennial. His works on theological symbolics (1885) and on the Church Catechism (1886) were published in German versions.

SCHEELITE (named in honor of Carl Scheele, who first discovered tungstic acid in the mineral). A mineral calcium tungstate crystallized in the tetragonal system. It has a vitreous lustre, and runs in color from white, through yellow, to red and green. It occurs with crystalline rocks, tin ores, and various tungsten minerals, and is found in Bohemia, Saxony, the Tyrol, Hungary, Chile, and in the United States at various localities in Connecticut, North Carolina, Nevada, and Colorado. It finds some use in the manufacture of tungstic acid, especially as the metal tungsten is being more and more employed in the manufacture of steel. Its use has also been suggested in the preparation of glazes for porcelain, but without great success.

SCHÉFER, shá'fár', CHARLES (1820-98). A French diplomat and Orientalist, born in Paris and educated at the Ecole Spéciale des Langues Orientales Vivantes. He entered the Foreign Office and served as dragoman in Jerusalem, Smyrna, Alexandria, and Constantinople. In 1857 he became professor of Persian in Paris, succeeding Quatremère; and ten years afterwards became president of the Ecole Spéciale des Langues Orientales Vivantes, whence, after more important service in the East in 1860 and 1862, he was transferred to the Collège de France. Schéfer edited many Persian texts and a Persian chrestomathy (1883-85), and edited and translated into French a great mass of material bearing on the history and early exploration of Central Asia, the most important of which was included in the *Recueil de voyages et de documents pour servir à l'histoire de géographie* (with Cordier, 1882-97). His collection of manuscripts is in the Bibliothèque Nationale.

SCHEFER, shá'fär, LEOPOLD (1784-1862). A German poet and novelist, born at Muskau. His works include: *Figulien* (1842); *Gotichte* (1846); the didactic and religious *Laienbrevier* (1834), one of his best works; *Weltpriester* (1846); *Hafis in Hellas* (1853). Some of his novels are *Kleine Romane* (1837-39), *Graf Promnitz* (1842), and *Achtzehn Töchter* (1847).

SCHÉF'FEL, JOSEPH VIKTOR VON (1826-86). A German poet and novelist, born at Karlsruhe, February 16, 1826. He studied law, philology, and literature at Heidelberg, Munich, and Berlin, served judicially at Säckingen (1850) and Bruchsal (1852), traveled in Italy, Switzerland, and

France, and from 1857 to 1859 was librarian at Donaueschingen. In 1864 he settled permanently at Karlsruhe. His first book, *Der Trompeter von Säckingen*, was written at Capri and Sorrento in 1852, and is the most popular German epic of the century; it is half playful, half melancholy, wholly romantic, and with the realism of fond memories. His historical novel *Elkhard*, written at Saint Gall and Heidelberg (1854-55), and based on systematic investigation, is a blending of history and poetry, vivid and faithfully picturesque. Soon afterwards he published *Gambamus*, a collection of student-songs. After 1857 Schéffel's health began to give way and his spirits with it. His later poems, tales, and novels, *Frau Aratiere* (1863), *Juniperus* (1881), *Der Heil von Steier* and *Huguido* (1884), never attained the popularity of his earlier works.

SCHEF'FER, Fr. pron. shéf'fär', ARY (1795-1858). A French painter of the romantic school. He was born at Dordrecht, Holland, February 12, 1795. He studied drawing at Lille and in 1811 went to Paris, where, in the studio of Guérin, he had Géricault and Delacroix for fellow students, and with them defied the ultra-classical teachings of Guérin. He preserved his connection with the new romantic movement in the expression of sentiment, but in execution he aimed more for purity of form. The three classes of subjects affected by him serve in a general way to divide his life into three periods. His attention was first attracted to scenes from real life, in the depiction of which he showed his sympathy with suffering, like "The Soldier's Widow" (1821); "Death of Géricault" (1824), now in the Louvre; "Orphans at the Tomb of Their Mother" (1824); "The Sullied Women" (1827). His second period shows him absorbed in ideal scenes drawn from the works of Goethe and Schiller, Byron and Dante. Among these are "Count Eberhard," in the Louvre; the "Submission of Wittkeind" and the "Battle of Zülpich," in the Versailles Museum. In 1830 he painted the first of his series dealing with Marguerite. To this subject he frequently returned, the final one of the series, "Marguerite at the Fountain," being painted in 1858. The third period, characterized by his religious subjects, is not distinctly marked off from the second, for he began the religious pictures with the "Christus Consolator" (1837), now in the Museum Fodor, Amsterdam. After 1840 he was largely occupied with sacred themes and reached his highest achievement in "Christ Weeping Over Jerusalem," "Christ Tempted of Satan," and the "Christ of the Reed."

The taste of recent years has deprived Scheffer of the high place he once occupied when the illustrative qualities of art were more in favor. Consult: His *Life* by Mrs. Grote (London, 1860); *Im-Thurn* (Nîmes, 1876); and Vitet, *Ary Scheffer Album* (Berlin, 1861).

SCHEF'FLER, JOHANN. A German poet. See ANGELUS SILFESTUS.

SCHEHE'RAZADE. In the *Arabian Nights*, the wife of Schahrialah, Sultan of India, to whom she relates a story each night for a thousand and one nights, and by exciting his interest escapes the usual fate of his wives.

SCHEINER, shí'nér, CHRISTOPH (c.1575-1650). A German astronomer, born at Wald, in

SCHEINER, JULIUS, professor of Hebrew and mathematics at Leisnig, and from 1610 to 1616 at Innsbruck, and after several years in Rome became professor at the Jesuit College of Neisse in Silesia. In his *Epistola ad Marcum Valerium* (1612), Scheiner claimed to have seen sun spots as early as March, 1611, and thus aroused the enmity of Galileo, whom Scheiner further provoked by upholding the old thesis of a 'stable' earth and a 'mobile' sun (1651). His great work on the sun, containing the results of about two thousand observations (made with an equatorial telescope of the type now called Sisson's), was the *Rosa Ursina* (1630). Scheiner invented a helioscope and a pantograph.

SCHEINER, JULIUS (1858—). A German astronomer, born in Cologne and educated at Bonn. He became assistant at the astrophysical observatory in Potsdam in 1887 and its observer-in-chief in 1898, three years after his appointment to the chair of astrophysics in the University of Berlin. Scheiner paid special attention to celestial photography and wrote *Der Lichtwechsel* (Bohn) (1882), *Spektralanalyse der Gestirne* (1890), *Anmessung des Orionnebels nach photographischen Aufnahmen* (1896), *Strahlung und Temperatur der Sonne* (1899), and *Bau des Weltalls* (1904). In 1899 he began the publication of the *Photographische Himmelskarte, Zone + 31° bis + 40° Declination*.

SCHELDT, skelt (Dutch *Schelde*, Fr. *Escaut*). A river of Belgium. It rises in France in the Department of Aisne and flows first north past Valenciennes into Belgium, then northeast past Ghent to Antwerp, below which city it empties into the large, branching estuary which merges with the Rhine delta and opens by several wide channels into the North Sea through Southwestern Holland (Map: Belgium, C 3). Its total length is 267 miles, and it is navigable 210 miles, while below Antwerp it is accessible to the largest ships. A system of canals connects it with the chief cities of Belgium and Northern France. The Dutch monopolized the navigation of the lower Scheldt, and levied a toll on foreign vessels until the river was made free by the Treaty of Brussels in 1863.

SCHELLING, shē'ling, FRIEDRICH WILHELM JOSEPH VON (1775-1854). A German philosopher. He was the son of a country clergyman, and was born at Leonberg, in Württemberg. He studied at Tübingen and Leipzig, and in 1798 was called to be professor extraordinary in Jena. Here he found himself in a remarkable social and literary circle, comprising among others the brothers Schlegel with their wives, Tieck, Steffens, and Novalis. With Goethe, too, he was on good terms, while Schiller's philosophical views repelled him. Schelling's philosophical tendencies had been originally determined by Fichte; in fact, he was at first an enthusiastic advocate of the Fichtean idealism, and his earliest writings, *Ueber die Möglichkeit einer Form der Philosophie überhaupt* (1795), and *Vom Ich als Princip der Philosophie* (1795), were composed in this spirit. Gradually, however, Schelling diverged from his master, who soon came to seem to him one-sided. The first result of his departure from Fichte's view was the once famous *Identitätsphilosophie*, which attempted to show that 'subject' and 'object,' the 'ideal' and the 'real' are completely undifferentiated in the absolute, and

that in nature there is a preponderance of the objective, while in consciousness there is a preponderance of the subjective. The 'philosophy of identity' reminds one of Spinozism (see SPINOZA) in maintaining a featureless ground of all existence. It differs from Spinozism in regarding the subjectives and the objectives as everywhere present together in the phenomenal world, but with varying preponderance of the two elements. The principal works in which this view is more or less completely developed are: *Ideen zu einer Philosophie der Natur* (1797); *Von der Weltseele* (1798); *Erster Entwurf eines Systems der Naturphilosophie* (1799); and *System des transcendentalen Idealismus* (1800). In 1803 he was called to Würzburg as professor of philosophy. Here his views underwent another change. He gave up the philosophy of 'identity,' and began to champion a mystical view, according to which all finitude is the result of a fall from the absolute—a fall the effects of which the course of history has to repair. This theory is first broached in *Philosophie und Religion* (1804). In his later works, *Philosophische Untersuchungen über das Wesen der menschlichen Freiheit* (1809), *Denkmal der Schrift Jacobs von den göttlichen Dingen* (1812), and *Ueber die Gottheit von Samothrake* (1815), he became more and more theosophical. He was now strongly under the influence of Bruno (q.v.) and Böhmé (q.v.), and maintained that within the absolute there is a dark irrational ground, which gradually becomes clarified, thus giving development to the idea of God. Meanwhile, in 1806, he had gone to Munich as member of the Academy of Arts. From 1820 to 1826 he lectured at Erlangen. In 1827 he was elected professor at the newly established University of Munich, and fourteen years later he went to Berlin as member of the Academy of Science. This position carried with it the privilege of lecturing in the University of Berlin. Between 1815 and 1842 Schelling published only two minor productions. This was due to the fact that a most formidable adversary to him had arisen in his old college friend Hegel (q.v.), who, though older, had at first been an ardent disciple of Schelling's. During the reign of Hegel in the world of German philosophy Schelling preserved a silence which was not broken till 1834, three years after Hegel's death; then he wrote a preface to Becker's translation of one of Cousin's writings. In this preface he criticised Hegel's views as being too exclusively idealistic and as giving no recognition to the empirical side of reality. He died at the baths of Ragatz, in Switzerland, August 20, 1854.

Schelling's complete works were published by his son K. F. A. Schelling (Stuttgart and Augsburg, 1856, et seq.). The second part contains his Berlin lectures. For Schelling's life, see Plitt, *Aus Schellings Leben in Briefen* (Leipzig, 1869-70). Kuno Fischer, in the 6th volume of his *Geschichte der neuen Philosophie*, gives a full biography in addition to an account of his philosophy. See also Watson, *Schelling's Transcendental Idealism* (Chicago, 1883); A. Seth (Pringle Patison), *The Development from Kant to Hegel* (London, 1882); Koerber, *Die Grundprincipien der Schelling'schen Naturphilosophie* (Berlin, 1882); Groos, *Die reine Vernunftwissenschaft* (Heidelberg, 1889); also the histories of philosophy by Ueberweg-Heinze, Höfling, Windelband, and Bergmann.

SCHEM, shēm, ALEXANDER JACOB (1826-81). An American statistician. He was born in Westphalia, and, after studying at the universities of Bonn and Tübingen, edited Westphalian newspapers until 1851, when he came to the United States. Here he was engaged as professor of Hebrew and modern languages at Dickinson College (1854-60), but resigned in 1860 to devote himself to literature. From 1874 until his death he was assistant superintendent of schools in New York. He edited statistical almanacs for 1860 and 1868-69; published a *Latin-English School Lexicon* (with Rev. George R. Crooks, 1857); a *Cyclopaedia of Education* (with Henry Kiddle, 1877); and was one of the editors of *The Methodist* and of *The Methodist Quarterly Review*. He edited the *Deutsch-Amerikanisches Conversations-Lexicon* (12 vols.).

SCHEMNITZ, shēm'nits (Hung. *Schemnitzbánya*). A royal free city and the capital of the County of Hont, Hungary, in a narrow mountain gorge, 66 miles north of Budapest (Map: Hungary, F 2). There are six suburbs. The academy for mining and wobderaft, embracing collections of minerals and a chemical laboratory, is the chief architectural feature. There are a ruined castle and a Piarist seminary. Cigars and shoes are manufactured. Schemnitz is famous for its mines, which extend under the town, and produce gold and silver, as well as copper, iron, and sulphur. It was made a free royal city in the twelfth century. Population, in 1900, 16,370.

SCHENCK, shkēk, ROBERT CUMMING (1809-90). An American soldier, political leader, and diplomat, born at Franklin, O. He graduated at Miami University in 1827, later studied law, and was admitted to the bar in 1831. In 1851-53 he was Minister to Brazil. While in South America he negotiated treaties between the United States and the Argentine Republic, Uruguay, and Paraguay. Upon the outbreak of the Civil War he was appointed a brigadier-general of volunteers. In 1861 he aided in clearing the mountains of West Virginia of Confederates, and the next spring he commanded the Federal right wing at Cross Keys. At the second battle of Bull Run he led his troops with the utmost gallantry and was severely wounded. He was then promoted to the rank of major-general of volunteers, but resigned his commission in 1863. He was a member of Congress from 1863 to 1870, and was successively chairman of the Committee on Military Affairs and chairman of the Committee on Ways and Means. In 1871 he was a member of the Joint High Commission which drew up the Treaty of Washington, and was Minister to England from 1871 to 1876, when he resigned in consequence of accusations made against him in connection with the Emma Silver Mine fraud. Subsequent investigations cleared him of all suspicion of complicity.

SCHENECTADY, shkēk'tā-dī. The county-seat of Schenectady County, N. Y., 17 miles northwest of Albany; on the Mohawk River and the Erie Canal and on the New York Central and Hudson River, the Delaware and Hudson, and the Fitchburg railroads (Map: New York, F 3). It rises gradually from the Mohawk River. The more elevated section is principally residential, and has the grounds and buildings of Union College (q.v.), a non-sectarian institution opened in

1795. Noteworthy are the court house, city hall, Van Curler Opera House, the Public Library, high school building, and Ellis Hospital. Schenectady is important industrially. In 1900, \$6,517,864 capital was invested in its various manufacturing establishments, whose output was valued at \$9,288,387. There are large electrical works, locomotive works, foundries and machine shops, bottling works, and manufactories of patent medicines, brooms, and brushes. The government, under the revised charter of 1897, is vested in a mayor, chosen biennially, and a unicameral council, and in administrative officials. For maintenance and operation the city spends annually about \$400,000, the principal items being: Schools, \$85,000; interest on debt, \$60,000; water works, \$60,000; municipal lighting, \$300,000; fire department, \$30,000; streets, \$30,000; police, \$30,000. The water works, which represent an outlay of \$1,236,610, are owned and operated by the municipality. The population in 1890 was 19,902; in 1900, 31,682.

Schenectady was settled in 1662 by Arendt Van Corlear, on the site of the great Mohawk Castle and capital of the Five Nations, Schenowé. On February 8, 1690, the French and Indians massacred 60 and captured between 80 and 90 of its 250 inhabitants, and destroyed 60 of its 66 houses. In 1748 another massacre occurred in its immediate vicinity. Schenectady was chartered as a borough in 1765 and became a city in 1798. In 1819 a large part of the town was destroyed by fire. Consult: Howell and Munsell, *History of Schenectady County* (Albany, 1886), and a sketch in Powell, *Historic Towns of the Middle States* (New York, 1899).

SCHENK, shkēk, AUGUST (1815-91). A German botanist and geologist, born at Hallein. After being docent in Munich, and professor in Würzburg, he was from 1868 to 1887 professor at Leipzig. On pre-historic flora Schenk was one of the greatest of German authorities. He wrote *Beiträge zur Flora der Varwelt* (1863), *Fossile Flora des Keupers und der ratischen Formation* (1864), *Fossile Flora der Grenzschichten des Keupers und Lias Frankens* (1865-67), and in Richthofen's *China* (1882), a summary of the flora from the anthracite and Jurassic formations.

SCHENK, JOHANN (1753-1836). An Austrian composer, born at Wiener Neustadt. In 1778 he composed a mass, which became popular throughout Germany, and in 1785 his first operetta, *Die Weibelse*, was produced at Vienna. This was followed by nearly a dozen others of similar character, of which the most important was *Der Dorfbarbier* (1796).

SCHENKEL, shkēk'el, DANIEL (1813-85). A Swiss theologian, born at Dägerlin, in the Canton of Zurich. After studying at Basel and Göttingen, he lectured and taught at Basel in 1838-41, and returned there in 1849 as professor and member of the Church Council, having in the meanwhile officiated as first parish priest at Schaffhausen. In 1851 he became professor, director of the seminary, and university chaplain at Heidelberg. Of his numerous writings the following partake essentially of the character of mediatory theology: *Das Wesen des Protestantismus* (1845-51); *Gespräche über Protestantismus und Katholicismus* (1853); *Der Unionsberuf des Protestantismus* (1855); and *Die Reformatoren und die Reformation* (1856). A transition to

of the *Estimable's* (*Die Gastliche Don*, 1858), and *Estimable's* (*Estimable's*, 1858-59). He also participated in the foundation of and the editing of the German Protestant Union, and his pamphlets were circulated in his *Christliche Kirche im Einklang mit der Kultur* (1867-72), and in *Der deutsche Protestantismus und seine Bedeutung in der Gegenwart* (1871). Much hostility was excited by his *Charakterbild Jesu* (1864, 4th ed. 1873). His subsequent publications include: *Frédéric Schlegelwörter* (1868); *Luther in Worms und in Wittenberg* (1870); and *Das Christusbild der Apostel und der nach-apostolischen Zeit* (1879). He also edited the *Bibelliterikon* (5 vols., Leipzig, 1869-75).

SCHENKENDORF, shēnk'en-dōrf, MAX VON (1783-1847). A German poet, born in Tilsit and educated at Königsberg. During the War of Liberation, in which he took an active part, Schenkendorf was associated with Arndt and Körner in the writing of patriotic songs. His poems were published as *Gedichte* (1815), *Poetischer Nachlass* (1832), and *Sämtliche Gedichte* (1837 and 1871). For his life, consult Hagen (Berlin, 1863) and Knaake (Tilsit, 1890).

SCHERER, shā'rār', EDMOND (1815-89). A French theologian and literary critic. He was born in Paris, studied theology in England and Strassburg, and in 1845 was appointed professor of exegesis at Geneva. Owing to the changes in his religious convictions, he resigned his professorship in 1859, and in 1860 removed to Versailles, where he headed a liberal movement in the French Protestant Church. After the establishment of the Republic he was elected, in 1871 a member of the National Assembly, and in 1875 a life Senator. His publications include: *Mélanges de critique religieuse* (1860); *Mélanges d'histoire religieuse* (1864); *Études critiques sur la littérature contemporaine* (1863-95), of which George Saintsbury translated *Essays on English Literature* (London, 1891); and biographies of Alexander Vinet (1853), Diderot (1880), and Melchior Grimm (1887). Consult his *Life* by Gréard (Paris, 1890).

SCHERER, shā'rār', WILHELM (1841-86). A German critic and literary historian. He was born in Berlin, studied there and at Vienna, and, after holding professorships at Vienna and Strassburg, was in 1877 appointed professor of the history of modern German literature at Berlin. In 1874 he had founded at Strassburg with Ten Brink the valuable series, *Quellen und Forschungen zur Sprach- und Kulturgeschichte der germanischen Völker*. Scherer's great work was the *Geschichte der deutschen Literatur* (1883, and often; Eng. tr. 1886), which is marked by scientific method, by grasp of the development of national literature, and by clarity of style. Besides, he wrote *Deutsche Studien*, on the eleventh and twelfth centuries (1870-78; 2d ed. 1891), a *Geschichte der deutschen Dichtung* in the same period (1875), *Zur Geschichte der deutschen Sprache* (1868), *Anfänge des deutschen Prosaeroms* (1877), *Jakob Grimm* (2d ed. 1885), and *Das Goethes Frühzeit* (1879).

SCHERMAN, shēr'mān, LUCIAN (1864—). A German Orientalist, first docent, and in 1901 extraordinary professor of Sanskrit language and literature in Munich. He wrote *Philosophische Hypothesen aus der Rig- und Atharva-Veda-San-*

hitā (1887), and *Matrilinear zur Geschichte der indischen Visionsliteratur* (1892), and in 1894 became the editor of the *Orientalische Bibliographie*.

SCHERR, shēr, JOHANNES (1817-86). A German literary critic, born at Hohenrechberg, Swabia, and educated at the universities of Zurich and Tübingen. In the revolution of 1848 he took so prominent a part that he was forced to flee to Switzerland. After 1860 he taught in the Zurich Polytechnic. He wrote some purely humorous sketches, a few novels, of which the most popular was *Michel, Geschichte eines Deutschen unserer Zeit* (1858; 7th ed. 1895); a series of literary and cultural histories and essays, notably *Allgemeine Geschichte der Literatur* (1851; 10th ed. 1900); *Deutsche Kultur- und Sittengeschichte* (1852; 11th ed. 1902); *Geschichte der englischen Literatur* (1854; 3d ed. 1883); *Geschichte der deutschen Frauenvvelt* (4th ed. 1879); and biographies of Schiller (1859; last ed. 1900) and of Blücher (1862; 4th ed. 1887). German critics compare him to Carlyle, because of his vivid style, his vehement bias, and his biting wit.

SCHERZER, shēr'tsēr, KARL VON (1821-1903). An Austrian traveler and author. He was born at Vienna and in 1852-55, with Moritz Wagner, visited the United States, Central America, and the West Indies. In 1857-59 he accompanied the Novara expedition around the world. On his return he was knighted, and in 1866 was made Ministerial counselor in the Department of Commerce. In 1869 he accompanied the Austrian expedition to Eastern Asia, and in 1872 entered the diplomatic service, becoming Consul-General in Smyrna. In 1875 he was transferred to London, in 1878 to Leipzig, and in 1884 to Genoa. He was an acute observer and wrote many volumes, among the more important being *Reisen in Nordamerika* (with Wagner, 1854), *Wanderungen durch die mittelamerikanischen Freistaaten* (1857), *Reise der österreichischen Fregatte Novara um die Erde* (1861-62, and statistical section), *Fachmännische Berichte über die österreichisch-ungarische Expedition nach Siam, China und Japan* (1872), *Smyrna* (1873), and *Das wirtschaftliche Leben der Völker* (1885).

SCHERZO, skēr'tsō (It., jest, sport). In music, a term applied to an instrumental composition of a lively, piquant character, admitting sudden and violent contrasts of dynamic shading. The term was originally used as a direction-mark for performers. In the modern sonata or symphony, however, the scherzo is an essential movement. It was first introduced by Beethoven, who greatly extended the form and gave it its special character, in his Second Symphony, where it takes the place of the minuet in the symphonies of Haydn and Mozart. Even in Haydn's time the minuet in the symphony had lost its original stately character, and Beethoven's first scherzo is more like the minuet than the form which he perfected later in the *Eroica*. Schumann, in the first and second of his symphonies, becomes an innovator through the introduction of two trios, instead of the usual one.

SCHEURER-KESTNER, shoi'rār-kēst'nēr, Fr. pron, shēr'rār' kēst'nār', AUGUSTE (1833—). A French chemist and politician. He was born at Mühlhausen, Alsace, and studied chemistry

in Paris. Becoming interested in the efforts to improve the condition of the workingman, he founded for that purpose, in 1865, a co-operative society. He was elected a representative from the Upper Rhine in the National Assembly in 1871, and in 1875 he was elected to the Senate. In 1879 he succeeded Gambetta as director of the journal *La République Française*. During the Dreyfus excitement he was conspicuous among those who believed in the prisoner's innocence, and he testified at Zola's trial. In addition to several scientific monographs, he published *Principes élémentaires de la théorie chimique des types appliqués aux combinaisons organiques* (1862).

SCHEVENINGEN, skā'vən-īn'gən. A noted bathing resort in South Holland, the Netherlands, on the coast, about two miles northwest of The Hague, with which it is incorporated and connected by a fine shaded allée, a canal, and an electric road (Map: Netherlands, C 2). It has a fine Kurhaus and is visited annually by over 20,000 guests. Here, in 1653, the English gained a great naval victory over the Dutch under M. Tromp, who was killed, and here De Ruyter, in 1673, defeated the combined fleets of England and France. Population, in 1900, about 20,000.

SCHIAPARELLI, skā'ā-pā-rēll'ē, GIOVANNI (1835—). An Italian astronomer, born at Savigliano, in Piedmont. He studied in Turin, in Berlin under Encke, and at Pulkova under W. Struve. In 1859 he returned to Italy and became second astronomer at the Milan observatory, and in 1862 its director, continuing in that position until 1900. In 1861 he discovered the planetoid Hesperia. In 1877 he discovered certain markings on the surface of Mars, the so-called 'canals.' (See MARS.) He has also announced that he has been able to observe markings on the surface of Mercury and to fix the period of its axial rotation as the same as that of its sidereal rotation. This, however, has not yet been sufficiently confirmed by other astronomers. (See MERCURY.) Of his numerous important writings may be mentioned *The Relation Between Comets and Falling Stars* (1871); *The Precursors of Copernicus in Antiquity* (1873); *Observations on the Movement of Rotation and the Topography of the Planet Mars* (1878-86).

SCHIAVONE, skā'ā-vō'nā, ANDREA (c.1522-82). The appellation of Andrea Meddola (Meddola, or Medula), an Italian etcher and engraver. He was born at Sebenico (Dalmatia), and went early to Venice and worked as a house decorator. He thus came under the notice of Titian, whose studio he entered and by whom he was strongly influenced. Giorgione and Tintoretto also left their mark upon his style. Indifferent in design, he succeeded to a marked degree in acquiring the Venetian color. He was one of the first painters of landscape for its own sake. Among his paintings are a "Pieta" and a "Madonna with Two Saints" (Dresden); "The Adoration of the Shepherds" (Uffizi); "Jupiter and Io" (Saint Petersburg); ceiling and wall paintings in the Libreria and San Rocco, Venice, and elsewhere. His etchings and engravings are inferior.

SCHIEDAM, skā'dām'. A river port of South Holland, the Netherlands, at the confluence of the Schie with the Meuse, three miles west of

Rotterdam (Map: Netherlands, C 3). The town is noted for its numerous distilleries of Holland gin, which is exported together with grain. Population, 1900, 27,126.

SCHIEFNER, shē'fner, FRANZ ANTON (1817-70). A Russian Orientalist, born in Royal (Lithuania), and educated at Saint Petersburg and Berlin. He was elected a member of the Saint Petersburg Academy of Sciences in 1862 and was chosen librarian of that body in 1863. Among his studies on the languages of Central Asia, the most important were on Tibetan literature, especially as a source for North Indian Buddhism. In 1868 he edited, and in 1869 translated into German, an edition of Yama's history of Buddhism. He also devoted himself to the Ural Altairic and Sibiric languages, translated the *Kabala* (1852), and wrote on the Tush (1856), Udie (1863), Tchetchents (1864), and Kasikumutsh (1866) dialects.

SCHIEVELBEIN, shē'fel-bīn, HERMANN (1817-67). A German sculptor, born in Berlin, where he became the pupil of Wichman. After an apprenticeship of three years he went to Saint Petersburg, and executed much decorative work, besides some statuary, for the Winter Palace and Saint Isaac's Cathedral. In 1841 he won the great prize of the Academy of Berlin, and after a short sojourn in Rome, returned to execute the group of "Pallas Athene Instructing the Youth in the Use of Weapons," for the palace bridge. Numerous plastic works for the royal palaces and various public buildings bear witness to his activity in Berlin, but his masterpiece was the grand frieze, more than two hundred feet in length, depicting in a series of impressive scenes the "Destruction of Pompeii and Herculaneum," in the Greek court of the New Museum. The plaster model of this extensive and harmonious composition is in the National Gallery. Distinguished for richness of imagination, noble conception, and intense poetic feeling, Schievelbein faithfully adhered to the traditions of the school founded by Schadow and Rauch.

SCHILLER, shil'ler, JOHANN CHRISTOPH FRIEDRICH VON (1759-1805). A famous German poet and dramatist, born at Marbach, Württemberg, November 10, 1759. Schiller's father was a military surgeon and captain; his mother an innkeeper's daughter with a taste for music. As a child he showed imagination, and desired to become a clergyman, but the autocratic Duke Karl of Württemberg "gently kidnapped" him for his military academy, aptly named "Solitude" (1773), against his will and his parents' desire. Here, under stern yet whimsical discipline, Schiller pined and read with omnivorous hunger, especially Shakespeare, Lessing, Klopstock, Goethe's *Werther*, and the sensational "Storm and Stress" (q.v.) dramas of Klinger and Leisewitz. Claudestinely he began to write, and when, in 1775, the school was moved to Stuttgart, he took up the study of medicine, but he continued his poetic essays, and in 1777 set to work on *Die Rauber*, the first of his published plays, intended as an emphatic protest against the existing political conditions of which he had himself been a victim.

On graduating from the dual school (December 11, 1780), Schiller was forced to take service as regimental surgeon, galled alike by his functions and his dress. His rebellious mood was

of the poet on the death of his friend and the later influence of society and its demands upon *Die Rauber*, printed at his own expense (1781), made an immediate and popular success. In a somewhat weakened form it was reissued (January 13, 1782) with great applause, though its style was in part as rough and unpolished as its plot was unartificial. Schiller then had gone surreptitiously to Mannheim to witness it, was sentenced to two weeks' arrest and forbidden to publish anything whatever. He escaped from Württemberg (September, 1782) with a romantic friend, Streicher, and for eight months remained in retirement with a generous patroness, Frau von Wolzogen, at Bauerbach. An historical drama, *Fiesco*, was nearly completed at the time of Schiller's escape. This he sold to the Mannheim theatre for ten louis, and began with fresh enthusiasm a third, *Laise Millierin*, later called *Kabale und Liebe*, on local political conditions, and a fourth on *Don Carlos*, son of Philip II. of Spain, in whose tragic fate Schiller's letters show that he had been for some years interested. He also made love to his patroness's daughter, which induced the mother to help him to establish himself at Mannheim (July, 1783), where he had an offer of permanent engagement as dramaturgist, which, however, he was soon compelled to cancel because of illness. *Piesko* was produced in January, 1784, and failed. It was a disguised political manifesto, more radical and democratic than the Mannheim public would tolerate, and it lacked intrinsic value; but it is of interest as Schiller's introduction to historical drama, in which his greatest dramatic successes were later to be achieved. *Kabale und Liebe*, which was enthusiastically received at Mannheim in April, 1784, was political also, but it was genuinely national and became immediately popular, touching the grander passions of human nature, and being recognized as the best German drama of contemporary life.

Under the influence of Wieland (q.v.), Schiller now began to turn *Don Carlos* into blank verse. He left Mannheim (April, 1785), in debt, but famous, and passed nearly two years in Gohlis, near Leipzig, and in Dresden, in close association with Körner, father of the patriotic poet, and himself a Mæcenas, who lent Schiller money. Here Schiller's morbid spirit yielded to the excessive hopefulness voiced in his *Ode to Joy (An die Freude)*, and in some declamatory passages of *Don Carlos*, which was not finished until May, 1787, for work on it had been interrupted by historical and philosophic studies, as well as by an unfinished attempt at prose romance, *Der Geisteserker*. A brief passion for Henriette von Arnim was not allowed to interrupt a platonic affection for the fascinating and emancipated Charlotte von Kalb, and this affection contributed not a little toward Schiller's choice of Weimar as his next place of abode (July, 1787).

The sensational success of *Don Carlos* was Schiller's sufficient passport to the German Athens, whose Duke had already given him a title. Its genuine, heartfelt, and pathetically preposterous enthusiasm for 'humanity' fell in with the spirit of the French Revolution and earned its author, in August, 1792, the honor of French citizenship. Schiller was warmly received in literary Weimar. Herder and Wieland were

cordial; Goethe, however, was in Italy. Schiller now turned from the drama to history, and in 1788 won scholarly consideration by the first volume of a study of the revolt of the Netherlands from Spain (*Geschichte des Abfalls der Niederlande*). He completed also as much as he ever wrote of the *Geisteserker*, and published two short poems, *Die Künstler* and *Die Götter Griechenlands*, significant because they mark the beginning of the classical influence that was soon to change the whole character of his work. He also did critical work on Wieland's *Deutscher Merkur*, studied Euripides and Homer, and found new joy of life in the acquaintance of Charlotte von Lengenfeld (born November 22, 1766), whom he afterwards married. With this inspiration he set to work to write himself out of debt, in the course of which he exasperated Goethe by criticism of *Egmont*. But, though their relations for six years after their first meeting (September 7, 1788) were those of distant courtesy, Goethe procured Schiller an appointment as adjunct professor of history, without pay, at Jena, then the chief university centre of German culture. Here his first lectures were sensationally successful, but his financial embarrassments continued, till relieved by a salary of 200 thalers, procured through the friendly offices of Frau von Stein (q.v.). Soon afterwards he married (February, 1790). In the next year overwork brought on illness, from which Schiller never wholly recovered, but a magnanimous gift from Prince Frederick Christian of Holstein-Augustenburg, of 1000 thalers annually for three years, relieved him from pressing burdens. He completed a history of the Thirty Years' War (1793), and drew from the *Esthetics* of Kant inspiration for essays on that subject in the literary journals *Thalia* and *Die Horen*, that contributed essentially to the development of taste and criticism in Germany. The most remarkable of these, *On the Naive and Sentimental in Poetry* (1796), was written after Schiller had formed with Goethe the friendship that was to guide and inspire Schiller's later years.

This period of prose composition had been interrupted in 1793 by illness. Schiller gave up his lectures at Jena and spent a year wandering in search of health. He had now become mentally ripe for intellectual communion with Goethe. Their meeting, by a prearranged chance, was a mutual surprise. Their acquaintance grew almost immediately to a friendship of rounded completeness. Their correspondence extends to more than 1000 letters and is a monument to literary unselfishness. They were constantly together, and talked unreservedly of their work and plans. Together they edited *Die Horen*, and soon, through his *Wilhelm Meister*, Goethe won Schiller back to poetry. *Die Ideale*, *Das Ideal und das Leben*, *Der Spaziergang* (1795), are witnesses to this new spirit and mark the highest reach of Schiller's philosophic muse. Their common part in the literary controversy of the day is marked also by the 400 *Veien*, "parting gifts" of epigram in the *Musenalmanach* (1796).

And now Schiller was ready for the loftiest flights of his dramatic genius. For ten years this talent had lain fallow, but they were years of æsthetic ripening. The realistic spirit of Goethe inspiring a great idealist was now to pro-

SCHILLER
FROM A PORTRAIT BY ANTON GRAFF

duce the classic Schiller. But first came the great ballad year (1797). While arranging materials for *Wallenstein*, on which composition was not begun till November, Schiller wrote *Der Taucher*, *Die Kraniche des Ibykus*, *Der Handschuh*, *Der Ring des Polykrates*, *Ritter Tauggenburg*, and *Der Gönig nach dem Eisenhammer*, all familiar to every German schoolboy, and remarkable for depth and intensity. In 1797 Schiller began also that most prized of German lyrics, *Das Lied von der Glocke* (1799), and in 1798 added to the list *Die Bürgschaft* and *Der Kampf mit dem Drachen*. In November, 1797, led by Goethe's counsel, he began to cast somewhat in its present form *Wallensteins Lager*, the introduction to the *Piccolomini*, and *Wallensteins Tod*, and by New Year he told Goethe that he had surpassed his best former self as "the fruit of our intercourse." It was not, however, till September, 1798, that he saw his way clear to the present trilogy, again during a visit to Goethe, and *Wallensteins Lager*, with the *Prolog*, was acted at Weimar, October 12, 1798, with great enthusiasm, *Die Piccolomini*, the trilogy's second part, was forwarded also by Goethe at every turn, and so effectively that it was finished by Christmas and acted on January 30, 1799, to a public which seemed awed by a loftier spirit than had yet crossed the German stage. Again Schiller visited Goethe for three weeks in Weimar, and before the end of March *Wallsteins Tod* was completed. The drama was presented in its complete form April 15, 17, and 20, 1799, ever memorable days in the annals of Weimar and of the German stage. As an acting play *Wallenstein* has never been surpassed in Germany. It revealed a new Schiller to the world and to himself. *Wallenstein* was a drama of the Thirty Years' War, of the inevitable conflict between the old order and the new, between genius and duty, between love and loyalty. Schiller left Weimar resolved to put on the stage the tragedy of Mary of Scotland. *Maria Stuart* was elaborated during a visit to Goethe, in May, 1799, and acted in June, 1800. His work suffered constant interruption from ill health, but he had never shown such mastery of the technique of his craft as in *Maria Stuart*. The versification is smoother than in *Wallenstein*, the arrangement more artistic, the story more dramatically unfolded, but the conception is inferior and the chief characters lack tragic depth. It is the pathos of Mary's fate more than its tragic necessity that impresses the spectator. Schiller now occasionally replaced Goethe in the management of the Weimar Court Theatre, and thus found occasion to adapt Shakespeare's *Macbeth* to its needs. Traces of this work are obvious in his next 'romantic tragedy,' *Die Jungfrau von Orleans*, an idealization of Joan of Arc, first acted in Leipzig, September 18, 1801. It was an unparalleled popular triumph, for it accorded with the romantic taste. It is now less admired.

In the autumn of 1801 Schiller visited Dresden and was so attracted to ideals of classic art, by what he saw in its museums, that his next drama, *Die Braut von Messina*, was severely classical in structure and conception. It was not completed until 1803. Herein relentless Nemesis appears in awful simplicity. In stateliness and dignity of diction, in classic irony, the drama is

supreme in Germany, but it did not win popular applause.

Before *Die Braut von Messina* had been acted, *Wilhelm Tell*, Schiller's last drama, was already well advanced, and two plays had been adapted from the French of Picard (*Le Comte de Mouchaux* as *Der Neffe als Oheim* and *Medea* as *Ein Haupt* as *Der Parasit*). Meantime Schiller had been ennobled. He was glad of it "for Lobe's and the children's sake." Work on the final form of *Tell* was begun in August, 1803, and the play was finished in February, 1804, after much study for effects of 'local color' and interruptions from the insatiable, inquisitive Madame de Staël, whose society, he told Goethe, was 'suffocating.' Her departure from Weimar made him feel "as though he had recovered from a severe illness."

Tell is sharply differentiated from all that goes before. Here success crowns a same activity, fate yields to will, the visionary reformer of *Die Rauber* and *Don Carlos* has become a practical realist. This growing serenity well befits the poet's last work and crowning achievement. The story of the Swiss hero struck a patriotic chord, for Germany was then on the eve of her deepest humiliation. No German drama had before nor has since produced so deep or enduring an impression. Schiller was invited to Berlin and royally welcomed. Prostrated by illness on his return, he did little during some months of suffering but sketch out *Demetrius*, a drama taken from Russian history, showing that his power of tragic conception and dramatic execution was at its highest at his untimely death in Weimar, May 9, 1805.

BIBLIOGRAPHY. Schiller's complete works have been best edited by Goedeke (Stuttgart, 1867-76), and by Boxberger and Birlinger in Kiirschner's *Deutsche National-Litteratur* (Berlin, 1882-91). Useful also is the Hempel edition by Boxberger and Von Maltzahn (Berlin, 1868-74); the poems are edited by Viehoff (6th ed., Stuttgart, 1887). An English translation appeared in Bohn's Library (London, 1846-49). Consult the biographies by Karoline von Wolzogen (Stuttgart and Tübingen, 1830), Viehoff (Stuttgart, 1875), Düntzer (Leipzig, 1881; Eng. trans., London, 1883), Brahm (Berlin, 1888), Minor (Berlin, 1890); and those in English by Carlyle (London, 1825), Bulwer-Lytton (ib., 1844), Sims in *Foreign Classics* (Edinburgh, 1882), Nevins in *Great Writers Series* (ib., 1889), Thomas (London, 1902). Consult also Schiller's correspondence with Goethe (Stuttgart, 1881), Humboldt (ib., 1876), his wife, Charlotte von Schiller, and her sister (ib., 1879), Körner (new ed., ib., 1895-96). For critical studies, see Kuno Fischer, *Schiller, Drei Vorlesungen* (Frankfurt, 1858-61); id., *Friedrich Schiller; Akademische Festrede* (Leipzig, 1860); the curious collection of contemporary criticisms in Braun, *Schiller und Goethe, Urtheile ihrer Zeitgenossen* (Berlin, 1882); and the following monographs: Belling, *Die Metrik Schillers* (Breslau, 1883); Ueberweg, *Schiller als Historiker und Philosoph* (Leipzig, 1884); Fielitz, *Studien zu Schillers Dramen* (ib., 1886); Koster, *Schiller als Dramatiker* (ib., 1890); Bellerman, *Schillers Dramen* (2d ed., Berlin, 1897-98); Bulthaupt, *Dramaturgie* (9th ed., Oldenburg, 1902). Translations of Schiller's lyrics by Merivale (London, 1844), Bowring (ib., 1851), and Lytton (ib., 1887) are noteworthy, as is Coleridge's condensed version of

of his dramatic works and other memorials in the Schiller-Archiv, in the Schiller-Archiv in Weimar. The Schiller-Fund is a fund raised to commemorate the centenary of the poet's birth, its income being devoted to the aid of needy men of letters.

SCHIL'LING, JOHANNES (1828—). A German sculptor, born at Mittweida, Saxony. He studied chiefly under Rietchel at Dresden, and Diede at Berlin. After winning a prize at Dresden, which enabled him to study for three years at Rome, he returned to that city in 1856, and became professor in the Academy in 1868. His first works to attract attention were the four admirable groups of "Morning," "Noon," "Evening," and "Night," on the Brühl Terrace in Dresden; of importance are also the monument to Schiller at Vienna; the colossal group of "Dionysos and Ariadne" in a chariot drawn by panthers, on the facade of the Royal Theatre at Dresden; and the monument to Emperor William I. at Wiesbaden (1894). His masterpiece is the celebrated national monument in the Niederwald (unveiled in 1883), in which the colossal figure of Germania is especially remarkable. His works represent the transition from the classical to the romantic style, and are characterized by a high sense of the beautiful and by careful execution. Consult Pecht, *Deutsche Künstler*, iv. (Nördlingen, 1885).

SCHIM'PER, KARL (1803-67). A German botanist, the pioneer of modern botanical morphology. He was born in Mannheim and was educated for the Church, but in 1826 began the study of botany at Munich. There he was docent for many years, spending much of his time in geological expeditions in the Alps and Pyrenees. In 1849 he received a pension from the Grand Duke of Baden and removed to Schwezingen. Schimper's *Beschreibung des Samphytum Zeyheri* (1835) expressed the theory of phyllotaxis, which he had formulated several years before, and which is his chief claim to fame. Consult Volger, *Leben und Leistungen des Naturforschers Karl Schimper* (Frankfort, 1889).

SCHIMPER, WILHELM PHILIPP (1808-80). A German geologist and botanist, best known for his valuable studies of the mosses. He was born in Strassburg, studied there, and in 1835 became assistant in the University Museum of Natural History, of which he was made director in 1839. He taught mineralogy and botany in the University of Strassburg and wrote *Bryologia Europæa* (with Bruch and Gümhel, 1836-55; supplement, 1864-66), *Icones Morphologicae* (1860), *Palæontologia Alsatia* (1854), and *Traité de paléontologie végétale* (1869-74). Consult Grate, *Guillaume Philippe Schimper* (Colmar, 1882).

SCHINKEL, shink'el, KARL FRIEDRICH (1781-1841). An eminent German architect. He was born at Neuruppin, Brandenburg, March 13, 1781, and studied the principles of drawing and design at Berlin under David and Friedrich Gilly. In 1803 he went to Italy to extend his professional knowledge; but on his return in 1805 he found the aspect of public affairs so threatening that he could obtain little employment, and was forced to take up landscape painting. In May, 1811, he was elected a member of, and in 1820 became professor at, the Berlin Academy of Fine Arts. Other offices and honors were also conferred on him. He died at Berlin October 9, 1841. His

principal structure was the Old Museum (1825-30), an admirable edifice in Greek style; other designs to which he chiefly owes his reputation are those of the Royal Guard-house (1816-18), the Royal Theatre (1819-21), the memorial of the War of the Liberation (1821), the palace bridge (1822-24), the new Potsdam gate, the artillery and engineers' school, in Berlin; the casino and the Church of Saint Nicholas in Potsdam; and a great number of castles, country houses, churches, and public buildings. Schinkel was a man of powerful and original genius; his designs are remarkable for the unity of idea by which they are pervaded, and the vigor, beauty, and harmony of their details. His tendencies were classical and he succeeded admirably in adapting Grecian forms to the need of modern buildings. Consult: *Aus Schinkels Nachlass*, edited by Wolzogen (Berlin, 1862-64); and the biographies by Kugler (ib., 1842), Bötticher (ib., 1857), Quast (Neuruppin, 1866), Herman Grimm, Woltmann, Dolme (Leipzig, 1882), Pecht (Nördlingen, 1885), and Ziller (ib., 1897).

SCHIO, ské'ó. A town in the Province of Vicenza, Italy, 20 miles by rail northwest of Vicenza (Map: Italy, F 2). It has an eighteenth-century cathedral and noted wool factories. There are also marble quarries, and silk, clay, and dye works. Population (commune), in 1901, 13,494.

SCHIPPER, shíp'ér, JAKOB (1842—). A German philologist and English scholar, born in Oldenburg. He studied modern languages in Bonn, Paris, Rome, and Oxford, collaborated on the revision of Bosworth's Anglo-Saxon Dictionary, and was professor of English philology at Königsberg from 1872 until 1877, when he received a like chair in Vienna. There he was elected to the Academy of Sciences in 1887, and acted as editor of the *Wiener Beiträge zur englischen Philologie* (1895-1900). He published *Englische Metrik* (1881-88), an important work, supplemented by a *Grundriss der englischen Metrik* (1895); *Zur Kritik der Shakespeare-Bacon-Frage* (1889), and *Der Bacon-Bacillus* (1896), and editions of the Alexis legends (1877-87), of Dunbar's poems (1892-94), and of Alfred's version of Bede's ecclesiastical history (1897-99).

SCHIRMER, shér'mér, JOHANN WILHELM (1807-63). A German landscape painter and etcher, born at Jülich. He studied under Schadow at Düsseldorf, and in 1853 was appointed director of the art school at Karlsruhe. He became known as one of the first of the so-called Düsseldorf landscape school. His romantic, classic, and biblical subjects include "The Grotto of Egeria" (1842), in the Leipzig Museum; "Twelve Scenes from the History of Abraham" (1859-62), and "An Italian Park," in the National Gallery at Berlin; four scenes of the "Good Samaritan" (1857), and "Storm in the Campagna," at Karlsruhe, and pictures in many other galleries in European cities.

SCHISM, WESTERN or GREAT. A celebrated disruption of communion in the Catholic Church, which arose out of a disputed claim to the succession to the Papal throne. On the death of Gregory XI., in 1378, a Neapolitan, Bartolommeo Prignano, was chosen Pope by the majority of the cardinals in a conclave at Rome, under the name of Urban VI. Soon afterwards, however, a

number of these cardinals withdrew, revoked the election, which they declared not to have been free, owing to the violence of the factions in Rome by which the conclave had, according to them, been overawed; and, in consequence, they proceeded to choose another pope under the name of Clement VII. The latter fixed his seat at Avignon, while Urban VI. lived at Rome. Each party had its adherents, and in each a rival succession was maintained down to the Council of Pisa in 1409, in which assembly both popes, the Roman Pope Gregory XII. and the Avignon Pope Benedict XIII. (Pedro de Luna), were deposed, and a third, Alexander V., was elected. He died a few months later, and was succeeded by John XXIII. A new council was convoked at Constance in 1414, by which not alone the former rivals, but even the new pontiff elected, by consent of the two parties, at Pisa, were set aside, and Otto Colonna was elected under the name of Martin V. In this election (1417) the whole body may be said to have acquiesced; but one of the claimants, Benedict XIII., remained obstinate in the assertion of his right till his death in 1424. The schism, however, may be said to have terminated in 1417, having thus endured nearly forty years. Consult, especially, Gayet, *Le grand schisme d'occident, d'après les documents contemporains* (Paris, 1899 et seq.), and the authorities referred to under PAPACY.

SCHIST. See CRYSTALLINE SCHIST.

SCHISTOSITY, or FOLIATION. A structure exhibited by many metamorphosed rocks, which is characterized by a parallel arrangement of the minerals and a tendency to split or cleave into plates. It is produced by a recrystallization of the constituents of a rock under the influence of metamorphic processes, such as heat and great pressure. Among the crystalline schists this structure is very prominent, such types as chlorite schist, talc schist, and actinolite schist cleaving almost as readily as slate.

SCHIZOGAMY, skí-zōg'á-mī (from Gk. σχίζω, *schízein*, to split + γάμος, *gamos*, marriage). That method of reproduction in which a sexual worm is produced (1) by fission or self-division, when it is said to be 'ússiparous,' or (2) by budding or gemmation, from a sexless worm, such as occurs in Syllis, etc., when it is said to be 'gemmaiparous.' Thus schizogamy is a form of parthenogenesis (q.v.).

SCHIZOGONY, skí-zōg'ó-nī (from Gk. σχίζω, *schízein*, to split + γονία, *gonía*, generation, from γόνος, *gonos*, seed). A kind of asexual generation, or self-fission, observed in many ophiuroids (q.v.) or brittle-stars, especially in the young, and also in starfishes, as species of *Asterias*, etc. In such cases the animal voluntarily divides through the disk in the shortest direction, i.e. from the mouth (oral) side to the upper (aboral) side, each separate half regenerating the missing parts as well as the additional arms. The division is brought about in most cases, and perhaps all, says Morgan, by the contraction of the muscles, and their arrangement in connection with the form of the body is the real cause of the act. Compare REGENERATION.

SCHIZOMYCETES, skí-zō-mí-s'fōz (Neo-Lat. nom. pl., from Gk. σχίζω, *schízein*, to split + μύκης, *mýkes*, mushroom), BACTERIA, FISSIOX FUNGI. One of the six great groups of fungi,

closely related to the blue-green algae (*Cyanophyta*, q.v.). They are minute one-celled plants, the smallest known organisms. They reproduce by fission (q.v.), and also pass into a resting condition (the so-called spore), in which, by secreting a protective wall, some can withstand a temperature above the boiling point of water. Some bacteria develop slime by the swell-

VARIOUS FORMS OF BACTERIA.

ing of the outer portions of the cell wall, so that the cells lie in a mass of mureilage. Many are free-swimming ciliated organisms, darting and twisting rapidly through the water. Although most species are unicellular, several of the higher groups are filamentous, in this resembling the higher blue-green algae. Many are held to be responsible for certain diseases of man, animals, and plants, among which are diphtheria, bubonic plague, and pear blight; others (zymogenic bacteria) to produce chemical changes associated with decomposition and some forms of fermentation (q.v.); others (chromogenic and photogenic) produce conspicuous pigments or emit light.

SCHIZOP'ODA. See CRUSTACEA; OPOSSUM-SHRIMP.

SCHLAGINTWEIT, shli'gint vit. The name of three explorers, sons of the Bavarian oculist Joseph Schlagintweit (1792-1854). HERMANN VON SCHLAGINTWEIT (1826-82), ADOLF (1829-57), and ROBERT (1833-85), traveled widely in Europe and Asia, and in 1859 were raised to the nobility by the King of Bavaria. They first attracted attention by their writings on the geography of the Alps, entitled *Untersuchungen über die physische Geographie der Alpen* (1850) and *Neue Untersuchungen* (1854), which included an atlas and a dissertation on the physical geography of the Kaisergebirge. In 1851 Hermann became privat-docent in meteorology and physics at the University of Berlin, and two years later Adolf began to lecture on geology at Munich. In the spring of the latter year the three brothers received commissions from the King of Prussia and from the British East India Company to study the meteorology and geology of the Himalaya Mountains. They reached Bombay in October, 1854, and proceeded thence by different routes over the Deccan to Madras. During the next spring and summer Adolf and Robert explored the Northwest Provinces, traversed the passes of the main chain of the Himalayas, and, after passing the Ibi Gamu (which they ascended to the height of 6788 meters, the

... (then attended by scientists), in 1846 they went to Smida, accompanied by Hermann, who had been sent to the West-Asian. From Smida they crossed the Karakorum and the Western Himalayas into Tibet; Hermann and Robert went to the Karakorum and the Kuen lun, and explored Western Tibet and the Upper Indus. Later in 1847 they crossed the country drained by the Ganges. Afterwards Hermann and Robert returned to Berlin, where they opened a museum and spent much of the remainder of their lives in arranging and classifying their collections. Adolf Schlägintweit once more to Leh and again crossed the Karakorum and the Kuen lun. In August, 1857, while traveling in Chinese Turkestan, he was arrested, taken to Kashgar, the capital, and there beheaded. Hermann and Robert published a report of their explorations under the title, *Results of a Scientific Mission to India and High Asia* (with atlas, 1860-66), the substance of which Hermann subsequently translated into German as *Reisen in Indien und Hochasien* (1869-80). Robert later traveled extensively in the United States and recorded his impressions in several works, including: *Kalifornien* (1871); *Die Mormonen* (2d ed. 1873); and *Die Prairie* (1876). Another brother, EMIL (1835-1904), is known for his studies of the language and history of Tibet.

SCHLAN, shlan. A town of Bohemia, Austria, 41 miles by rail northwest of Prague (Map: Austria, D 4). It has a Franciscan monastery, agricultural, art, and industrial schools, and several hospitals. There are extensive coal fields and important manufactures of iron, machinery, chemicals, and cotton. Population, in 1900, 9494.

SCHLANGENBAD, shläng'en-bäd. A well-known watering place 5 miles northwest of Wiesbaden, Germany. It is delightfully situated in a forested vale, and is mostly frequented by women. The waters are alkaline. The old Kurhaus dates from 1694. Population, in 1900, 374.

SCHLATTER, shlä'tt'er, Anor (1852-?). A German theologian, born in St. Gallen, Switzerland. He became professor in Bern in 1888, in Berlin, in 1893, and in Tübingen in 1897. He wrote *Der Glaube im Neuen Testament* (1885; 2d ed. 1896); commentaries on Romans (3d ed. 1895), on Hebrews (3d ed. 1898), on James and the Johanne Epistles (2d ed. 1900), on Matthew (2d ed. 1900), on John (1899), and on Mark and Luke (1900); *Zur Topographie und Geschichte Palästinas* (1893); and *Israels Geschichte von Alexander dem Grossen bis Hadrian* (1901). With Cremer he edited *Beiträge zur Förderung Christlicher Theologie* (1897 et seq.).

SCHLATTER, FRANCIS (1856-?). A collder who, because of miraculous cures attributed to him, became known as 'The Healer.' He was born of German peasants in the village of Elser, in Alsace Lorraine. In 1884 he emigrated to the United States, where he worked at his trade in various cities until 1892, when he thought that a voice bade him sell his business, give the money to the poor, and devote his life to healing the sick. He was then in Denver, Col., but soon after entering upon his mission left that city, and, traveling on foot, visited Kansas City, Hot Springs, Arkansas; El Paso, San Diego, San Francisco, and

Albuquerque. At the latter place in July, 1895, he suddenly became famous. Crowds gathered about him daily, hoping to be cured of their diseases by simply clasping his hands. The following month he returned to Denver, but did not resume his healings until September. Meantime, a great multitude had gathered there to receive treatment from him. Schlatter is said to have refused all reward for his services, and when money was given to him in such a way that it could not be returned it was asserted that he distributed it among the poor. His manner of living was of the simplest, and he taught no new doctrine. He said only that he obeyed a power which he called 'Father' and from this power he claimed to receive his healing virtue. On November 13 he disappeared, leaving behind him a brief note, in which he declared that his mission was ended.

SCHLATTER, MICHAEL (1716-90). A German Reformed minister. He was born at Saint Gall, and was educated there and at the University of Helmstedt. He entered the ministry, and in 1746 was sent by the synods of Holland to the German Reformed emigrants in Pennsylvania. He was pastor of the German Reformed churches in Philadelphia and Germantown, 1746-51, and organized churches in Pennsylvania, New Jersey, Maryland, and Virginia. He assisted in organizing the Synod of the German Reformed Church in 1747, but in 1755 gave up pastoral work, so as to devote himself to the organization of schools among the Germans, in which English should be taught. In 1757 he was chaplain of an expedition to Nova Scotia against the French, returned in 1759, and preached at Chestnut Hill, now part of Philadelphia, and elsewhere. He was still a royal chaplain when the Revolutionary War broke out, but, espousing the cause of the colonies, he was imprisoned in 1777, when the British took Philadelphia. Consult his *Life* by H. Harbaugh (Philadelphia, 1857).

SCHLECHTA, shlök'tá, OTTOKAR MARIA VON (1825-94). An Austrian Orientalist. He was born in Vienna, studied there, was dragoman in Constantinople from 1848 to 1860, and from 1870 to 1874 was Consul-General at Bucharest, where he represented the Danube Commission, and whence he was transferred to Teheran to act as Plenipotentiary there. The Schlechta collection of Oriental manuscripts is now in the Vienna Imperial Library. He wrote *Die osmanischen Geschichtsschreiber der neuern Zeit* (1856), *Der Kampf zwischen Persien und Russland in Transkaukasien* (1864), *Manuel terminologique français-ottoman* (1870), and valuable translations from the Persian.

SCHLEGEL, shlä'g'el, AUGUST WILHELM VON (1767-1845). A distinguished German critic, poet, and Orientalist. He was born at Hanover, September 8, 1767, and studied at Göttingen. He first began to win prominence in literature, while a lecturer at Jena, by his contributions to Schiller's *Horen* and *Musicalmanach*, and to the *Allgemeine Literaturzeitung*. About the same time his translation of Shakespeare began to appear (1797-1810), the influence of which on German poetry and on the German stage was alike great. The poet Tieck undertook a revision of the work, together with a translation of such plays as Schlegel had omitted (1825, 1839, 1843).

The Schlegel-Tieck translation is universally considered better than any other rendering of Shakespeare in a foreign language. Thanks to Schlegel and Tieck, Shakespeare has become a national poet of Germany. Schlegel also delivered at Jena a series of lectures on aesthetics, and, with his brother Friedrich (q.v.), edited the *Athenäum* (1798-1800), a severely critical authority of high rank. He published, besides his first volume of poems, *Gedichte* (1800), and, in company with his brother, the *Charakteristiken und Kritiken* (1801). In 1801 Schlegel left Jena for Berlin, where he gave a series of lectures on literature, art, and the spirit of the time. In 1803 appeared his *Ivan*, an antique tragedy of considerable merit. It was followed by his *Spanisches Theater* (1803-09), consisting of five pieces of Calderon's, admirably translated, the effect of which has been to make that poet a favorite with the German people, and his *Blumenstrauße der italienischen, spanischen und portugiesischen Poesie* (Berlin, 1804), a charming collection of southern lyrics, from the appearance of which dates the naturalization in German verse of the metrical forms of the Romance races. In 1804, having become estranged from his wife, a daughter of Professor Michaelis of Göttingen, Schlegel entered the household of Madame de Staël as a tutor of her children. He traveled much, visiting Italy, France, Austria, and Sweden. He wrote in French a *Comparaison de la Phèdre d'Euripide avec celle de Racine* (1807). Probably his most valuable, and certainly his most widely popular work, was the *Vorlesungen über dramatische Kunst und Litteratur* (1809-11), originally delivered at Vienna, in the spring of 1808, and translated into most European languages.

Between 1811 and 1815 Schlegel published a new collection of his poems (*Poetische Werke*), which contains his masterpieces, "Arion," "Pygmalion," "Sankt Lucas," and is notable for the richness and variety of its poetic forms. In 1818 Schlegel, now raised to the nobility, was appointed professor of history in the University of Bonn, and devoted himself especially to the history of the fine arts and to philological research. He was one of the first students of Sanskrit in Germany, and published at Bonn an *Indische Bibliothek* (1820-26). About 1817 Schlegel married a daughter of Professor Paulus of Heidelberg, but they parted in 1821. Schlegel was quarrelsome, jealous, and ungenerous in his relations with literary men, and did not even shrink from slander when his spleen was excited. He died in Bonn, May 12, 1845. Consult: Pichtos, *Die Aesthetik L. W. von Schlegels in ihrer geschichtlichen Entwicklung* (Berlin, 1894); and Bernays, *Zur Entstehungsgeschichte des Schlegelschen Shakespeares* (Leipzig, 1872).

SCHLEGEL, FRIEDRICH VON (1772-1829). A German literary historian, critic, and writer on aesthetics, brother of August Wilhelm von Schlegel, born at Hanover. He studied philosophy at Göttingen and Leipzig, and in 1797 published his first work, *Die Griechen und Römer*, which was followed in 1798 by his *Geschichte der Poesie der Griechen und Römer*. The chief vehicle at this time for the dissemination of his philosophical views of literature was the *Athenäum*, an organ of the romantic school, edited by himself and his brother. In *Lucinde*, an unfinished novel (1799), he cynically reveals his relations with

Dorothea Veit, who had left her husband, a Berlin banker, in 1798 and ultimately married Schlegel in Paris (1804). Proceeding to Jena, he began there as a privat-docent, delivering lectures on philosophy, which met with small favor, and still editing the *Athenäum*, to which he also began to contribute poems of his own. In 1802 appeared his *Abacos*, a tragedy, in which the classical and romantic elements are queerly blended. From Jena he soon went to Paris, where he gave philosophical lectures, edited the *Europa*, a monthly journal (1803), and applied himself to the languages of Southern Europe, and to Sanskrit, the fruits of which were seen in his treatise *Ueber die Sprache und Weisheit der Indier* (1808). During his residence in Paris he also published a *Sammlung romantischer Dichtungen des Mittelalters* (1804).

He returned to Germany in 1801 and settled at Cologne. There, in 1808, he and his wife joined the Roman Catholic Church, a change which powerfully affected his future literary career. In the same year Schlegel went to Vienna, where he was employed by the Archduke Charles as a secretary, and wrote fervent proclamations against Napoleon. In 1811 appeared the lectures he had delivered at Vienna, under the title, *Ueber die neuere Geschichte*, and in 1815 his *Geschichte der alten und neuen Litteratur*. In 1819 he made a trip to Italy. In 1822 a collected edition of his writings, in 12 volumes, was published by himself. Subsequently he delivered at Vienna and Dresden lectures on the "Philosophy of Life" (*Philosophie des Lebens*, 1828), on the "Philosophy of History" (*Philosophie der Geschichte*, 1829), and on the "Philosophy of Language" (*Philosophie der Sprache*, 1830). He died in Dresden. His manuscripts were published by Windischmann (Bonn, 1836-37). Consult *Friedrich Schlegel, Briefe an seinen Bruder*, edited by Walzel (Berlin, 1890).

SCHLEICH, Shlik, Eduard (1812-74). A German painter, born at Harbach, near Landshut, Bavaria. In all his pictures the play of sunlight, the clouds, the haze over the sun, and sky effects are particularly fine. His landscapes are to be found in all the principal galleries of Germany. Consult Pecht, *Deutsche Künstler*, iv. (Nürnberg, 1885).

SCHLEICHER, Shlik'er, August (1821-68). A German philologist, born at Meiningen. He was educated at Leipzig, Tübingen, and Bonn. In 1850 he was appointed professor extraordinary of classical philology at Prague, becoming full professor of German, comparative philology, and Sanskrit three years later. Here he began the study of Lithuanian and the Slavic languages. In 1857 he was called to Jena as professor of the science of language and Germanic philology, and remained there until his death. Schleicher's importance in the history of comparative philology is due to the fact that he sums up in his *Kompendium der veraltenden Grammatik der indogermanischen Sprachen* (1862; 4th ed. 1876) the results achieved by the science up to that date. His *Handbuch der litauischen Sprache* (1856-57) and his *Litauische Märchen, Sprichwörter, Rätsel und Fabeln* (1857) are still of value, while his *Deutsche Sprache* (1860; 5th ed. 1888) is a book of more popular interest. Among his other works the most important are:

in *Die Geschichte der Sprache* (Schl.) (1818); *Die Sprache der Griechen* (1819); *Die Sprache der Römer* (1820); *Die Sprache der Deutschen* (1821); *Die Sprache der Angelsachsen*, in which he introduced the word *Stammesgeschichte* of the Germanic languages (see Philology) (1863); 3d ed. (1871); *Die Bedeutung der Sprache für die Entwicklung des Geistes* (1854); *Einleitung in die slavische Sprache* (1853); an edition of the Luthman poem of Christian Denzelis (1865); and the posthumous *Lehr- und Formelbuch der polnischen Sprache* (1871). Consult Lehmann, *August Schleicher* (Leipzig, 1870).

SCHLEIDEN, schlī'den, MATTHIAS JAKOB (1804-81). A German botanist, born at Hamburg. After beginning a course of law at Heidelberg, he turned his attention to natural history and studied for several years at the universities of Göttingen and Berlin. In 1839 he became a professor of botany at Jena. There he remained until 1863, and after a brief residence at Dresden became in 1864 professor of botanical chemistry and anthropology at the University of Dorpat. This position he held for little more than a year, when he settled again in Dresden and devoted himself to private research and authorship. His most important work was his *Grundzüge der Wissenschaftlichen Botanik* (2 vols., 1842, 4th ed. 1862), in which he emphasized the inductive method of botanical research, and sharply attacked the hazy philosophical treatment of morphological questions. Among his other works were: *Beiträge zur Botanik* (1814); *Studien, populäre Vorträge* (1857); *Die Landenge von Suess* (1858); *Zur Theorie des Erkennens durch den Gesichtssinn* (1861); *Die Pflanze und ihr Leben* (1864); *Für Baum und Wald* (1870); *Die Rose* (1873); *Das Salz* (1874); *Die Romantik des Martyriums bei den Juden im Mittelalter* (1878); *Das Meer* (1887).

SCHLEIERMACHER, shlē'er-māk'ēr, FRIEDRICH ERNST DANIEL (1768-1834). A German theologian and philosopher, born in Breslau. Strong religious influences were brought to bear upon the boy, not only at home, but also at the Moravian schools in Niesky and Barby, where he spent four years (1783-87). He spent two years (1787-89) at the University of Halle, after which he became private tutor. In 1794 he was ordained to the ministry and became assistant to a clergyman at Landsberg. In 1796 he was appointed chaplain at the Charité Hospital in Berlin, where he continued for six years. He was on terms of intimate friendship with the Romanticists, especially Schlegel, and he sympathized with many of their tastes and aims, yet with a profound conviction of the necessity of religion, which they did not share. His first important literary work, *Ueber die Religion*, five discourses upon religion (1799), was designed to vindicate the claims of religion to the attention and respect of the cultivated. In the discourses one can trace a pantheistic tendency, derived from Spinoza, a philosopher whom Schleiermacher greatly admired. The *Mondäne* were published in 1800 and exhibit the influence of Fichte's subjective idealism. The first collection of Schleiermacher's sermons appeared in 1801, followed later by several other collections, all of which had a wide circulation. From 1802 to 1804 Schleiermacher was Court preacher at Stolpe,

in Pomerania, where he published his *Grundriss einer Kritik der bisherigen Sittenlehre*. For the next two years he was professor extraordinary and university preacher at Halle, where he began the publication of his translation of Plato, a work which gave him an assured position among classical scholars. Here also he wrote a critical essay on *First Timothy*, rejecting the Pauline authorship, chiefly on the basis of internal evidence. In 1809 he took up his permanent residence in Berlin, where he became pastor of the *Dreifaltigkeitskirche* and professor at the newly founded university. As a member of the Academy of Sciences, he was brought into association with De Wette, Niebuhr, and many other eminent men. His influence over the Protestant Church for a quarter of a century was most marked, and he may almost be said to have dominated contemporary German theology. At the third centennial anniversary of the Protestant Reformation (1817), Schleiermacher took an active part in promoting the union of Lutheran and Reformed churches, a step toward ecclesiastical comprehension which accorded well with his convictions of what the Christian Church should be. His *Kurze Darstellung des theologischen Studiums* (1811) was an important contribution to that subject, and proved of great value in rightly directing the development of theological education in Germany. Probably the most important of all Schleiermacher's writings was his treatise on Christian faith, commonly cited under the name *Glaubenslehre* (1821; 3d ed. 1835), one of the truly great theological systems of history. For insight, grasp, and power of presentation, it has properly been compared with the works of Origen and Calvin, but in its general point of view it resembles the former far more than the latter. The *Grundriss der philosophischen Ethik* was published posthumously by his pupil Twisten (1841).

The works and teaching of Schleiermacher mark an epoch in the history of Christian thought. He restored religion to its place as a normal and necessary element of human nature, by pointing out a neglected factor, feeling. Rationalistic morals had for a long time usurped the place which religion ought to occupy, but had left men dissatisfied. Schleiermacher recalled them to their rightful spiritual privileges. Indeed, in his analysis of religion, he over-emphasized the truth he had rediscovered, making religion consist essentially in a 'feeling of absolute dependence.' The subjective character of his theology laid him open to severe criticism from the orthodox side, yet so genuine was his religious faith, and so central was the place of Christ in his teaching, that he escaped ecclesiastical censure. His influence has been strongly felt in Great Britain and America. Schleiermacher's *Sämmtliche Werke*, in 30 vols., appeared at Berlin in 1835-64. *Selected Sermons*, translated by M. F. Wilson, was published in London, 1890; *Speeches (Reden)*, translated by John Oman, in London, 1893. Consult: *The Life of Schleiermacher*, translated by Rowan (London, 1860); Dorner, *History of Protestant Theology* (Eng. trans., Edinburgh, 1871); Lichtenberger, *History of German Theology in the Nineteenth Century* (Eng. trans., ib., 1889); Frank, *Geschichte und Kritik der neueren Theologie* (2d ed., Erlangen, 1895); Pfeleiderer, *Protestant Theology*

in *Germany Since Kant* (Eng. trans., London, 1890).

SCHLEIZ, shlihts. The second residence town of the Principality of Reuss, Younger Line, Germany, in a fertile district, 20 miles northwest of Plauen (Map Germany, D 3). Among the architectural features of the town are a late Gothic church with the burial vaults of the rulers, and the palace of the Prince with a library. Schleiz has a provincial deaf and dumb asylum, industrial art schools, and a workhouse. It manufactures cotton and woolen goods, metal wares, and toys. In the vicinity is a picturesque castle belonging to the Prince. Population, in 1900, 5331.

SCHLESWIG, shlä-vik (Danish *Slesvig*). Until 1864 a duchy belonging to Denmark, separated from Holstein by the Eider (Map: Denmark, C 4). In 1866 it was annexed to Prussia as a part of the Province of Schleswig-Holstein (q.v.).

SCHLESWIG. The capital of the Province of Schleswig-Holstein, Prussia, at the west end of the Schlei, 87 miles by rail north by west of Hamburg (Map: Prussia, C 1). It consists chiefly of a single semicircular street, and is divided into Friedrichsberg, Löffhus, and the Altstadt. Its principal structures are the twelfth-century Romanesque Gothic Cathedral, restored in 1894, containing an oak shrine with 398 carved figures; Saint Michael's Church (1100), recently rebuilt; and the church and palace of Gottorp. The industries are fishing, the manufacture of leather and machinery, and the shipping of coal, cereals, and lumber. Schleswig is first mentioned in 804 as Sliestorp. It was made the seat of a bishopric in 948, and received municipal privileges in the twelfth century. It was the residence of the Danish Governor of Schleswig-Holstein from 1731 to 1846. In 1865 it passed to Prussia. Population, in 1900, 17,909.

SCHLESWIG-HOLSTEIN, hšl'st'in. A province of Prussia, occupying the most northerly part of the German Empire, with the exception of the district about Memel. It is bounded by Jutland on the north, the Baltic Sea, Lübeck, and Mecklenburg-Schwerin on the east, Hamburg and Hanover on the south, and the North Sea on the west (Map: Prussia, C 1). The former duchies of Schleswig and Holstein constitute the northern and southern halves respectively. Its area is about 7340 square miles. The surface is generally flat. The eastern coast land, which is indented by several deep and narrow fiords, and which is more elevated than the western, contains most of the agricultural land of the province. The interior is chiefly moorland, a continuation of the Lüneburg heath on the south. The soil along the western coast consists of marshy but fertile marine alluvium, and the land is here so low that it has to be protected from the sea by dikes. The west coast is lined by a series of sandy islands inclosing shallow lagoons, which are in great part dry at low tide. The principal rivers flow into the North Sea. The Elbe forms the southern boundary of the province, and the Eider separates the former duchies of Schleswig and Holstein. The province is traversed by several canals, the most important of which is the new

Kaiser Wilhelm Canal, connecting the North Sea with the Baltic.

Agriculture is the chief occupation of the province. The production of wheat, rye, oats, barley, potatoes, hay, beets, etc., is considerable. Schleswig-Holstein has long been famous for its excellent cattle, which are exported all over the world for breeding purposes. Horses are also extensively raised. The fisheries are of limited extent. The oyster banks owned by the State show signs of exhaustion. The mineral production is small, and confined chiefly to iron and turf.

Manufacturing industries are little developed. Metal ware and some machinery are produced, and there are several textile mills, shipyards, sugar refineries, distilleries, etc. The advantageous position of the province between the North Sea and the Baltic has contributed largely to its commercial development, which is much greater than the natural resources of the province would warrant. The shipping is very considerable in the three chief ports of Altona, Flensburg, and Kiel, the last being also an important naval port. Administratively the province is continuous with the District of Schleswig, the seat of government being at the town of Schleswig. In the Prussian Landtag the province is represented by 19 members in the Lower and 11 in the Upper Chamber. It returns 10 members to the German Reichstag. Population, in 1900, 1,387,587, almost wholly Protestant. There were 135,000 Danes. Danish is still the predominating language in the northern districts.

HISTORY. Schleswig was annexed to the German Kingdom in the tenth century and was constituted a so-called mark. The town of Schleswig became the seat of a bishopric in 948. The region was obtained by the Danish King Knut (Canute) from the Emperor Conrad II. in 1027, and for a long time it was administered as a separate sovereignty by members of the Danish royal house. In the course of the thirteenth century Schleswig was transformed into an hereditary duchy, which remained a fief of Denmark. In 1375 Schleswig passed into the possession of the counts of Holstein of the House of Rendsburg. Margaret of Denmark confirmed this union by a treaty in 1386, Schleswig continuing as before a Danish fief, with a provision that it should never be incorporated with Denmark. In 1460, after the extinction of the Rendsburg line, Schleswig and Holstein placed themselves under the rule of Christian I. of Denmark, of the House of Oldenburg. This union was in the nature of a dynastic one merely, and it was stipulated that Schleswig and Holstein should never be separated from each other. As ruler of Holstein the King of Denmark became a member of the Germanic body. In 1474 Holstein was erected from a county into a duchy. The Danes always regarded Schleswig as Danish and the mass of the people were until recently Danish. Under the House of Oldenburg the nobility became more and more Germanized. By the beginning of the nineteenth century the German population had become as numerous as the Danish. Holstein had at an early period become completely Germanized.

After the Napoleonic wars the King of Denmark entered the Diet of the German Confederation as Duke of Holstein. King Christian VIII., who ascended the throne in 1839, made it the chief aim of his policy to bring Schleswig-Hol-

Gulf blockading squadron. Subsequently he was attached to the *Monongahela* and *Richmond*, and took part in all the engagements preceding the capture of Port Hudson. From 1864 to 1866 he was executive officer of the *Water* of the Pacific squadron, attaining the rank of lieutenant commander in the latter year. He was an instructor at the Naval Academy from 1866 to 1869, and in 1870 was assigned to the *Benicia* on the China station, where he remained three years, and distinguished himself in the capture of the Korean forts on the Salce River in June, 1871. In 1874 he was promoted to the rank of commander and was again detailed as an instructor at the Naval Academy. From 1876 to 1879 he commanded the *Essex* on the Brazil station. In 1881 he commanded the third naval expedition sent by the United States Government to the relief of Lieut. A. W. Greely (q.v.), and after passing through 1400 miles of ice found Cape Greely and the six survivors of his band at Cape Sabine, Grinnell Land. From 1885 to 1889 Schley was chief of the Bureau of Recruiting and Equipment, and in 1888 attained the rank of captain. In 1889-91 he commanded the cruiser *Baltimore* in the Southern Pacific. After several years' service as a lighthouse inspector, he was placed in command of the *New York* in 1895, and in 1897-98 was chairman of the Lighthouse Board. He reached the rank of commodore in February, 1898, and after the formal declaration of war against Spain, although the lowest on the list of commodores, was placed in command of the 'Flying Squadron.' On May 13th he sailed southward from Hampton Roads in order to find and if possible destroy the Spanish fleet of Admiral Cervera. He touched at Cienfuegos, and after considerable hesitation and delay established the blockade of Santiago, in whose harbor it was finally ascertained on May 29th that the Spanish fleet lay. At the beginning of June Admiral Sampson arrived with his ships and assumed command. The blockade was maintained until the morning of the 3d of July, when the attempt of the Spanish squadron to escape from the harbor ended in its complete destruction by the American blockading squadron, which, during the temporary absence of Sampson, was under the command of Schley. The *Brooklyn*, with Commodore Schley on board, bore a conspicuous part in the contest, particularly in the pursuit and destruction of the *Christóbal Colón*, but a peculiar 'loop' movement which Schley ordered, and which blanketed the fire of some of the other battleships, and caused the *Taras* to deviate from her course in order to escape being run down, caused much adverse criticism. On August 10th he became a rear-admiral, and was appointed a member of the commission to arrange for the evacuation of Porto Rico by the Spanish. He retired from active service October 9, 1901. After the close of the war his conduct during the operations leading up to the battle off Santiago and in the battle itself became the subjects of criticism, both official and unofficial, to such an extent that Schley finally asked for a court of inquiry to investigate the charges brought against him. A court consisting of Admiral Dewey (president), and Rear-Admirals Benham and Ramsay, sat from September 21 to November 7, 1901, took the testimony of more than seventy-five witnesses, and on December 13th made its report. The 'majority' report, signed by all three members,

found that, while Schley's conduct in the battle showed personal courage, in the operations prior to June 1st it was marked by "vacillation, dilatoriness, and lack of enterprise," that he was slow to obey express commands of his commander-in-chief, that his dispatches were "inaccurate and misleading," and that his 'loop' movement in the battle of July 3d was unseamanlike and unnecessary. Admiral Dewey presented a 'minority' report, upholding Schley in some minor respects. The recommendation of the court that no action be taken was subsequently approved by the President. Schley wrote in collaboration with James Russell Soley (q.v.) *The Rescue of Greely* (1886).

SCHLIEMANN, shlé'mán, HENRICH (1822-90). A famous excavator and archeologist, born in Neu Buckow, Mecklenburg-Schwern. From the age of twelve to fourteen he studied in the Realschule in Neustrelitz and then became apprentice as grocer's clerk in Fürstenberg. After five years his health broke down, and he walked to Hamburg, where he shipped for South America as cabin boy. The vessel was wrecked off the Dutch coast, but Schliemann was saved and taken to Amsterdam. Here he held a humble position in a commercial house, but by his enormous industry acquired a knowledge of all the important modern languages. His ability and linguistic attainments were recognized by his subsequent employers, B. H. Schroeder & Co., in 1846, when they sent him to Saint Petersburg as their agent. In the following year he embarked in business on his own account. For the next sixteen years he was successful in business, traveled much, and by mere chance on July 4, 1850, being present in California at the time that State was received into the Union, became a citizen of the United States. He finally retired from business with a large fortune in 1863. He then settled in Paris, and gave himself up entirely to archeological studies. During the year 1868 he visited Corfu, Ithaca, the Peloponnesus, and Asia Minor, and finally, in 1870, began excavations in the Troad on the hill of Hissarlik, where he believed the remains of ancient Troy would be discovered. The excavations were continued by him for twelve years, and finally completed by Dr. Dörpfeld in 1892. Although many of Schliemann's extravagant claims as to the results obtained are untenable, the excavations which he began at Hissarlik were the first of a long series of undertakings which have given us new knowledge of the early civilization of the Greeks. From 1876 to 1878 he carried on excavations at Mycenæ, and in 1878 at Mount Athos, and at Ithaca. In 1881-82 he excavated at Orchomenos, and continued the work there in 1886. In 1884-85 he laid bare the ruins of the great palace at Tiryns, and in 1889 he returned to Troy. He died at Naples and is buried near the Hissus at Athens. His many publications include: *Ithaka, der Peloponnesus und Troja* (1869); *Trojanische Altertümer* (1874); *Mykenä* (1878; English ed., New York, 1878); *Hois* (1881; English ed., New York, 1881); *Orchomenos* (1881); *Troja* (in an English ed., New York, 1883; German ed., Leipzig, 1884). His autobiography was edited by his wife (Leipzig, 1891). The best general account of Schliemann's life and work is to be found in Schuchhardt's *Schliemanns Ausgrabungen in Troja, Tiryns, Mykenä, Orchomenos, Ithaka* (2d ed., Leipzig, 1891).

of Schliemann of the title *Schliemann's Excavations: An Archaeological and Historical Study* (London, 1891).

SCHLIK, šlik, FRANZ, Count von (1789-1862). An Austrian cavalry general, born in Prague. In the campaign of 1813-14 he took a prominent part, winning the rank of major. In 1814 he had become field-marshal lieutenant, and in the winter of 1818 he was ordered into Upper Hungary at the head of a corps of only 8000 men, with which he at first carried on a successful campaign against a superior force, but was soon forced to retreat. He joined Windischgrätz's forces and contributed to the victory of Kapolna. In 1839 he commanded the second Austrian army, which formed the right wing at Solferino.

SCHLITZ, šlits, JOHANN EUSTACH VON GÖRTZ, Count of (1737-1821). A Prussian diplomat, born at Schlitz and educated at the University of Strassburg. In 1778 he went as the secret agent of Frederick II. of Prussia to Munich and Zweibrücken, with the special mission of preventing the cession of Lower Bavaria to Austria after the death of Maximilian Joseph. In 1779-85 he was Ambassador to Russia and rendered important services, though he failed to prevent Russia's withdrawal from her alliance with Prussia. After the death of Frederick II. he went to the Netherlands for the purpose of reconciling the Stadtholder's Government and the democratic party. From 1788 to 1806 he was the Prussian representative at the Imperial Diet at Regensburg. He took part in the peace congress held at Rastatt in 1797-99, and served as a member of the Imperial commission formed to execute the provisions of the Treaty of Lunéville (1801). He resigned from the State service after the Treaty of Tilsit (1807). His writings include: *Mémoires ou précis historique sur la neutralité armée* (1801); *Mémoires et actes authentiques relatifs aux négociations qui ont précédé le partage de la Pologne* (1810); *Mémoire historique de la négociation en 1778* (1812). His posthumous *Historische und politische Denkwürdigkeiten* were published in 1827-28.

SCHLÖMILCH, šhl'ómilk, OSKAR (1823-1901). A German mathematician, born in Weimar. He studied at Jena, Berlin, and Vienna, became privat-docent at Jena in 1844, and two years later assistant professor. In 1849 he was called to the Polytechnic Institute at Dresden as professor of higher mathematics and analytical mechanics. He was widely known as editor (from 1856) of the *Zeitschrift für Mathematik und Physik* (Leipzig), usually called *Schlömilch's Zeitschrift*. He wrote: *Handbuch der algebraischen Analysis* (6th ed. 1881); *Analytische Studien* (1848); *Compendium der höhern Analysis* (1853); *Übungsbuch zum Studium der höhern Analysis* (4th ed. 1888); *Grundzüge einer wissenschaftlichen Darstellung der Geometrie des Raumes* (7th ed. 1888); *Analytische Geometrie des Raumes* (last ed. 1898). Consult *Zeitschrift für Mathematik*, vol. xlvi. (Leipzig, 1901; with portrait).

SCHLOSSER, šhl's'sér, FRIEDRICH CHRISTOPH (1776-1861). A German historian, born at Jena, Oldenburg. He studied at Göttingen, was for several years a private tutor, then a librarian in Frankfurt, and in 1817 was called to Heidelberg as professor of history. His most notable

works are the *Geschichte des 18. Jahrhunderts*, continued by Schlosser in the later editions till the fall of Napoleon, and the *Weltgeschichte für das Deutsche Volk*; both have been translated into English and other tongues. Schlosser's historical writing was done from the ethical, rather than the severely critical point of view, and has enjoyed considerable popularity.

SCHLÖZER, šhl'ót'sér, AUGUST LUDWIG VON (1735-1809). A German historian, born at Gaggstadt. He studied theology and the Oriental languages at Wittenberg and Göttingen, went to Stockholm and Upsala in 1755, and returned to Göttingen in 1759, to study music. From 1761 to 1769 he was in Saint Petersburg, and then became professor at Göttingen. The most important of his works are: *Allgemeine nordische Geschichte* (1772); *Weltgeschichte im Auszuge und Zusammenhange* (1792 and 1901), and *Vorbereitung zur Weltgeschichte für Kinder* (6th ed. 1806), with both of which he did pioneer work by a more intelligent and spirited treatment of universal history. Consult Zermelo's *August Ludwig Schläzer* (Berlin, 1875).

SCHLÖZER, KURD VON (1822-94). A German diplomat and historian, born in Lübeck, and educated at Göttingen, Bonn, and Berlin. He entered the Prussian service in 1850, became secretary of the legation at Saint Petersburg in 1857, at Rome in 1863, Minister of the North-German Confederation in Mexico in 1867, German Ambassador at Washington in 1871, and in 1882 Prussian Ambassador to Rome, where he took a prominent part in settling the Kulturkampf. He retired from public life in 1892. Among his works are: *Choiseul und seine Zeit* (2d ed. 1887); *Geschichte der deutschen Ostseeländer* (1850-53); and *Friedrich der Grosse und Katharina II.* (1859).

SCHLÜTER, šhl'üt'ör, ANDREAS (1664-1714). A German sculptor and architect. He was born in Hamburg, as the son of a sculptor, studied in Italy, and, after spending three years at Warsaw as architect, was called in 1694 to Berlin as Court architect. But he lost the favor of Frederick I., and spent the last two years of his life in the service of Peter the Great, in Russia. Schlüter's most famous works are the decorations in the Potsdam 'Marmorsaal,' the main part of the Charlottenburg Castle, the Berlin Arsenal, with its masks of dying warriors, an equestrian statue of the Great Elector (1703, his masterpiece), the northern part of the Berlin Castle, and the mausoleum of Frederick I. and his consort. He is reckoned the greatest German sculptor of his day, and in Berlin alone there are more than eighty of his statues. For his biography, consult Kläden (Berlin, 1855), Adler (ib., 1862), and Gurlitt (ib., 1890).

SCHMALKALDEN, shmäl-käl'den, or **SMALCALD**. A town in the Province of Hesse-Nassau, Prussia, at the confluence of the Stille and the Schmalkalde, 18 miles southwest of Gotha (Map; Prussia, D 3). It has been largely modernized, but retains its double walls, ancient court house, and castle. Interesting features are the fifteenth-century Gothic church, with a famous organ, and the Luther fountain. There are iron mines and salt baths. The manufactures are chiefly of hardware. Schmalkalden is first mentioned in 874. It is famous as the scene

of the formation of the German Protestant League in 1531. (See SCHMALKALDIC LEAGUE.) Population, in 1890, 7318; in 1900, 8726.

SCHMALKALDIC LEAGUE. The name given to the defensive alliance organized at Schmalkalden (q.v.), December 31, 1530, by a number of Protestant princes and Imperial cities, and formally concluded April 4, 1531. Chief among the organizers of the League were: John the Constant, Elector of Saxony; his son, John Frederick (who succeeded to the Electorate in 1532); and Philip, Landgrave of Hesse. The rulers of Saxony and Hesse were empowered to manage its affairs. The object of this alliance, which was soon greatly extended, was the defense of the religion and political freedom of the Protestants against the power of the Emperor Charles V. Against the League the Emperor, engaged as he was at the time in contests with the Turks and French, found himself unable to contend, and in 1532 he was forced to grant the religious peace of Nuremberg. Finally, however, in 1546, he resolved to turn his guns against the Protestants, and the War of the Schmalkaldic League ensued, in which the Emperor had the support of Maurice, the ambitious Duke of Saxony, of the Albertine line, who was induced to betray the Protestants by the promise of the Electorate of Saxony. The Protestant forces, under John Frederick, were totally routed at Mühlberg (April 24, 1547), and both the Elector and Philip of Hesse fell into the Emperor's hands. This defeat finished the war. The object of the League, the guaranty of the liberty of religion to the Protestants, was subsequently effected by Maurice, then Elector of Saxony, who, having rejoined the Protestants, by a brilliant feat of diplomacy and generalship compelled the Emperor to grant the Treaty of Passau (August 2, 1552), by which this freedom was secured. For references, see REFORMATION; also CHARLES V.; SAXE, MAURICE, COUNT OF; GERMANY.

SCHMARDA, shmär'dá, LUDWIG KARL (1819—). An Austrian naturalist and traveler, born at Olmütz, Moravia. He studied in Vienna, and became professor in 1850, at the University of Graz, where he founded the Zoological Museum, and in 1852 at Prague. In 1853-57 he traveled around the world, and in 1862 was appointed professor at the University of Vienna. For the Government he investigated the industry of fisheries on the Austrian (1863-65) and French (1868) coasts, and, after having retired from service in 1883, visited Spain and the African coast in 1884, 1886, and 1887. His publications include: *Androutungen aus dem Seeleben der Thiere* (1846); *Zur Naturgeschichte der Adria* (1852); *Die geographische Verbreitung der Thiere* (1853); *Zur Naturgeschichte Aegyptens* (1854); *Neue wirbellose Thiere* (1859-61); *Reise um die Erde* (1861); and a textbook for higher institutions, entitled *Zoologie* (1877-78).

SCHMARSOW, shmär'só, AUGUST (1853—). A German art historian, born at Schildfeld, Mecklenburg-Schwerin, and educated in Zurich, Strassburg, and Bonn. He became docent of the history of art at Göttingen in 1881, professor there in 1882, at Breslau in 1886, went to Florence in 1892, and thence to Berlin in 1893. He founded the Florence Institute for the History of Art in 1888, and wrote biographies of David

D'Angers, Ingres, and Proudhon in *Dohme's Kunst und Künstler; Leben; und Scottellus* (1877); *Raphael und Pinturicchio in Siena* (1880); *Melozzo da Forlì* (1886); *Donatello* (1886); *Giorgio Santi* (1887); *Martin von Lucca* (1889); *Masaccio Studien* (1895-96), with atlas; *Barock und Rokoko* (1897); and *Plastik, Malerei und Reliefkunst* (1899).

SCHMAUK, shmóuk, THEODORE, EMANUEL (1860—). An American Lutheran clergyman and author, born in Lancaster, Pa. He graduated at the University of Pennsylvania, and at the Lutheran Theological Seminary in Philadelphia, and went as pastor to Lebanon, Pa., in 1883. Afterwards he became literary editor of *The Lutheran* (1889), editor in chief of the *Lutheran Church Review* (1892) and of other Lutheran publications. His works include: *The Negative Criticism of the Old Testament* (1894); *Catechetical Outlines* (1892); and *Manual of Bible Geography* (1901).

SCHMEKS, shméks. See TÁTRAFÜRED.

SCHMELLER, shmé'ler, JOHANN ANDREAS (1785-1852). A German philologist. He was born at Tirschenreuth, Bavaria, and studied in Munich. His studies of German dialects began with Bavarian, and in 1821 he published *Die Mundarten Bayerns* (supplemented by a lexicon, 1827-36). From 1828 until his death he taught in the University of Munich. Schmeller edited the *Höland* (1830); the Old High German *Fränkischharmonie* (1811); the *Muspilli* (1832); *Latvinische Gedichte des 10. und 11. Jahrhunderts* (1836); *Carmina Burana* (1847); and Hadamar von Lauer's *Jagd* (1850). His *Cimbrisches Wörterbuch* was edited by Bergmann in 1855. Consult Nieklas, *Schmellers Leben und Wirken* (Munich, 1885).

SCHMERLING, shmér'ling, ANTON, Ritter von (1805-93). A distinguished Austrian statesman, born in Vienna, where he studied law and in 1829 entered the Government service. As an opponent of Metternich's policy he was sent to represent Austria at the Frankfurt Parliament, and presided over it after the retirement of Colredo. Elected to the National Assembly, he advocated a constitutional monarchy, and was appointed Minister of Foreign Affairs and of the Interior by the Vice-regent, Archduke John. Prussian influence having prevailed against his efforts to uphold the Austrian hegemony, he retired, and in Vienna entered Schwarzenberg's Cabinet as Minister of Justice, in which capacity he created the trial by jury. At variance with the reactionary policy of Prince Schwarzenberg, he resigned in 1851, soon after became chairman of the Senate of the Supreme Court, and in 1858 President of the Provincial Court of Appeals. The popular opposition to the federal October diploma of 1860 led to the appointment of Schmerling as Minister of State to promote the transformation of Austria into a constitutional monarchy, but his failure to overcome the opposition of the Hungarian Diet to his measures forced him to resign in 1865, whereupon he was appointed President of the Supreme Court. In 1867 he was made a life member of the House of Lords, where he repeatedly acted as first vice-president, and since 1879 led the party in opposition to the policy of Count Taaffe. For his biography, consult Arneth (Vienna, 1895).

SCHMID. **JOHANN CHRISTOPH VON** (1768-1854). A German writer of juvenile works, born at Dresden. His principal juveniles, which were translated into French and English, are *Biblisches Geschichte* (1792), *Kinder-Druckwechelsabhandl.*, *Genofera*, *Genofera*, *Das Blauschwarzbeken*, and *Urdelungen* (*Kinder- und Kasperleunde* (1823-29)). His autobiography, *Erinnerungen aus meinem Leben*, was published in 1871.

SCHMID. **HERMANN VON** (1815-80). A German novelist and dramatist, born at Weizenkirchen, Austria, and educated at Munich. In 1870 he became manager of the Güttenrather Theatre, but resigned the position after a few years. His plays, collected in 1853, include several historical dramas, such as *Karl Stuart* and *Columbus*, but his greater success was in portraying peasant life, as in *Die Zwicklerruwin* (1878) and *Der Loder* (1880). In his novels, too, such as *Alvararuseh* and *Eddelweiss*, *Der Hahnenmeister*, etc. he is at his best when describing Bavarian customs.

SCHMID. **MATTHIAS** (1835-). An Austrian genre painter, born at See, in the Paznaun Valley, Tyrol. He got his early training in painting at home, and in 1853 went to Munich, where in 1856 he entered the Academy. In 1871 he became a pupil of Piloty and turned from religious subjects to satiric genre pictures of the Tyrolean priesthood, like "Mendicant Friars" and "A Judge of Morals" (1872). A later manner, free from anti-clerical animus, is shown in "The Betrothal" (1879), "His Reverence Lathered" (1883), "Going on a Pilgrimage" (1886), and "The Holiday Orator" (1893).

SCHMIDT. **SCHMIT, ERICH** (1853-). A German historian of literature, born at Jena, son of Oskar Schmidt. He studied Germanic philology and literary history at Graz, Jena, and Strassburg, established himself as privat docent at Würzburg in 1875, became professor at Strassburg in 1877, at Vienna in 1880, and director of the Goethe archive at Weimar in 1885. Thence he was called to Berlin in 1887, to succeed Wilhelm Scherer in the chair of German language and literature. Devoted almost exclusively to the investigation of modern literature, especially of the classical period, he published: *Richardson, Rousseau, and Goethe* (1875); *Lenz und Klinger* (1878); *Heinrich Leopold Wagner* (1879); *Beiträge zur Kenntnis der Klopstock'schen Jugendlyrik* (1880); *Charakteristiken* (1st series 1886; 2d series 1900); and the excellent biography of *Lessing* (2d ed. 1899). He edited two volumes of the *Schriften der Goethe-Gesellschaft* (Weimar, 1886 and 1893); *Faust*, for the Weimar edition; and in 1887 he published *Goethe's Faust in ursprünglicher Gestalt* (3d ed. 1894), discovered by him in Dresden.

SCHMIDT, FRIEDRICH, BARON (1825-91). A distinguished architect, born at Frickenhofen, Württemberg. He studied under Breymann and Mauch in the Polytechnic at Stuttgart. At the age of eighteen he obtained work as a mason on the cathedral at Cologne, where after two years he became a master mason. In 1857 he was called to the Milan Academy as professor, and was awarded the contract for restoring the Church of Saint Ambrogio. In 1859 he settled in Vienna, was appointed professor at the academy in 1860, architect of Saint Stephen's in 1863, and was

raised to a baronetcy in 1888. His principal buildings in Vienna are the church of the Lazarists (1860-62), the parish church at Fünfhaus (1864-74), the gymnasium (1863-66), and the new city hall (1872-83), his most imposing work. He was one of the most eminent exponents of the Gothic style in German architecture. Consult *Reichenspieger, Zur Charakteristik des Baumeisters Friedrich Freiherrn von Schmidt* (Düsseldorf, 1891).

SCHMIDT, GEORG FRIEDRICH (1712-75). A German engraver and designer, born in Berlin. He studied art there under Busch, and under Larmessin in Paris. In 1744 he was appointed engraver to Frederick II., in Berlin, and in 1757 he was summoned to Saint Petersburg by the Empress Elizabeth to engrave her portrait and to organize a school of engraving. His engravings and etchings in the style of Rembrandt rank with the best work of the eighteenth century in Germany. He engraved about 200 plates, the best of which are "The Empress Elizabeth of Russia," "Count Nicholas Eszterházy," "Pierre Mignard," "The Virgin and Child with Saint John," "The Raising of Jairus's Daughter," and "The Mother of Rembrandt."

SCHMIDT, HENRY IMMANUEL (1806-89). An American clergyman and educator. He was born at Nazareth, Pa., and was educated at the Moravian Academy and Theological Seminary of his native place. He joined the Lutheran denomination and during the earlier years of his career held pastorates in Bergen County, N. J.; at Boston, Mass., and at Palatine, N. J. He also taught at Hartwick Seminary, N. Y.; Pennsylvania College, Gettysburg, Pa., and later at the theological seminary of that place. In 1848 he became professor of the German language and literature at Columbia College. He was the author of a *History of Education* (1842; 10th ed. 1858); *The Scriptural Character of the Lutheran Doctrine of the Lord's Supper* (1852); *Course of Ancient Geography* (1860).

SCHMIDT, JOHANNES (1843-1901). A German philologist, born at Prenzlau, Prussia, and educated at Bonn and Jena. In 1868 he obtained a position as docent in comparative philology at Bonn and became adjunct professor in 1873. In the same year he was called to the professorship of comparative philology at Gratz, and in 1876 he accepted a similar chair in Berlin, where he remained until his death. His first important contribution was his 'wave theory' with reference to the relationship of the Indo-Germanic languages. (See PHILOLOGY.) Among the most important of his numerous works were: *Die Verwandtschaftsverhältnisse der indogermanischen Sprachen* (1872); *Ueber die Thilung des indogermanischen Sprachstammes* (1873); *Zur Geschichte des indogermanischen Vokalismus* (1875); *Die Pluralbildungen der indogermanischen Neutra* (1889); *Die Urheimat der Indogermanen und das europäische Zahlssystem* (1890); and *Kritik der Sanskrittheorie* (1895). He was joint editor with Ernst Juhn of the *Zeitschrift für vergleichende Sprachforschung* from 1875 until his death.

SCHMIDT, JOHANN FRIEDRICH JULIUS (1825-84). A German astronomer, born in Eutin. He was employed in the Hamburg Observatory (1842-45), and for a short time at a private observatory at Bilk. He became assistant ob-

server at Bonn (1846), observer at Olmütz (1853), and director of the observatory at Athens (1858), where he remained till his death. He studied the physical nature of comets and of the moon, the brightness and periodicity of stars, and physical geography, especially that of Greece. Besides his contributions to the *Astronomische Nachrichten* and to the *Publications de l'Observatoire d'Athènes*, he published a revision of Lohrmann's chart of the moon (1877) and a very valuable independent chart (1878), and wrote *Der Mond* (1856), *Vulkanstudien* (1874), and *Studien über Erdbeben* (1875).

SCHMIDT, JULIAN (1818-86). An eminent German historian of literature, born at Marienwerder, West Prussia. He studied history and philology at Königsberg, taught in Berlin from 1842 to 1846, and went to Leipzig in 1847 as contributor to the *Grenzboten*, which he owned and edited, conjointly with Gustav Freytag, from 1848 to 1861. Returning to Berlin, he conducted for two years the *Berliner Allgemeine Zeitung*, then confined himself to the field of literary history. His first work of importance was the *Geschichte der Romantik im Zeitalter der Revolution und Restauration* (1847). His numerous critical articles for the *Grenzboten* formed the basis for his *Geschichte der deutschen National-Litteratur im 19. Jahrhundert* (1853); 5th ed., revised and enlarged, under the title *Geschichte der deutschen Litteratur seit Lessings Tod* (1865-67). Into this was subsequently incorporated his *Geschichte des geistigen Lebens in Deutschland von Leibniz bis auf Lessings Tod* (1860-64), and both works appeared combined as *Geschichte der deutschen Litteratur von Leibniz bis auf unsere Zeit* (1886-96). Noteworthy are also *Geschichte der französischen Litteratur seit der Revolution 1789* (2d ed. 1873-74); *Uebersicht der englischen Litteratur im 19. Jahrhundert* (1859); *Schiller und seine Zeitgenossen* (1859); and the collections of ingenious essays *Bilder aus dem geistigen Leben unserer Zeit* (1870-74), and *Profrats aus dem 19. Jahrhundert* (1878). Julian Schmidt exercised more influence upon the period of German intellectual life in which he worked than has been accorded him. As a critic in journals and periodicals, his discussions comprised the entire scope of intellectual life in science, arts, and politics. The forte of his criticism, especially in regard to works of art, lay in an almost infallible instinct to perceive truth, power, and sterling worth, which quality enabled him to teach his contemporaries not to borrow their views of things from remote chains of thought, but to trust the spontaneity of their own feelings.

SCHMIDT, KARL (1812-95). An Alsatian Lutheran theologian. He was born and educated and died in Strassburg, and was professor of theology in the university from 1837 to 1877. He wrote, in French and German, numerous excellent works, of which may be mentioned his biographical studies of Gerson, Tauler, Roussel, Vermigli, Farel, Viret, Melancthon, and Nicolas of Basel, and of the German and other mediaeval mystics. His *Essai historique sur la société civile dans le monde romain et sur sa transformation par le christianisme* (1853) was translated into English under the title, *The Social Result of Early Christianity* (London, 1885).

SCHMIDT, MAX (1818-1901). A German landscape painter, born in Berlin, where he studied in the Art Academy under Begas and Schirmer. He was largely influenced in his choice of subjects and in his treatment by his familiarity with Egypt and Greece, and paid little heed to German scenes until 1854, but then treated them with rare poetic feeling. In 1868 he became instructor at the School of Arts in Weimar, and in 1872 went to the Königsberg Academy. His chief works are the Oriental frescoes in the Berlin Museum, "Wood and Mountain" (1868), and "A View on the Spruce" (1877), both in the Berlin National Gallery. He wrote *Die Aquarillmalerei* (7th ed. 1901).

SCHMIDT, MAXIMILIAN (1832—). A German novelist and humorist, born at Eschlkam, Bavaria. He served with distinction in the Bavarian army from 1850 to 1872, when he retired and settled at Munich to devote himself exclusively to his literary work. Among the best of his numerous tales and novels, dealing vividly and realistically with the people and scenery of the Bavarian Mountains, should be mentioned: *Volkszahlungen aus dem Bayrischen Wald* (1863-69); *Der Schutzgeist von Oberammergau* (1880); *Is Austragsstüberl*; *Der Georgthaler* (1882); *Die Fischerei von St. Ulrich* (1884); *Der Musikant von Tegernsee* (1886); *Is Lisel von Ammersee* (1887); *Die Kunischen Fräulein* (1895). Gradually these productions fell off in literary merit, as the author became more and more prolific. Lasting success attended his *Hummresken* (1892), the collection of dialect poems *Althairisch* (1884), and several popular plays, dramatized from his novels. He also published the autobiography *Meine Wanderung durch 70 Jahre* (1902). His *Gesammelte Werke* appeared in popular edition of 34 vols. (Reutlingen, 1898-93).

SCHMIDT, NATHANIEL (1862—). An American Hebraist, born at Hudiksvall, Sweden, and educated at Stockholm University, at Colgate University, and at the University of Berlin. He was professor of Semitic languages and literature in Colgate University from 1888 to 1896, and then became professor of the same branches at Cornell. He contributed to the *Encyclopaedia Biblica*, to the *Jewish Encyclopaedia*, and to the *New International Encyclopaedia*, and wrote: *Biblical Criticism and Theological Belief* (1897); *The Republic of Man* (1899); *Ecclesiastics* (1903); *The Son of Man and the Son of God in Modern Theology* (1903).

SCHMIDT, OSKAR (1823-86). A German zoölogist, born at Torgau. After studying at Halle and Berlin, he began to lecture on zoölogy at Jena in 1846, became professor there in 1849, and successively at Craëw (1855), Graz (1857), and Strassburg (1872). His reputation is based upon the handbook of comparative anatomy, the 9th ed. of which, by Lang, was issued under the title *Lehrbuch der vergleichenden Anatomie der wirbellosen Tiere* (1888-94). He also wrote a *Lehrbuch der Zoologie* (1853), and for advanced classes *Leitfaden der Zoologie* (4th ed. 1882). From 1860 he devoted himself more especially to the investigation of Spongia, and published on this subject several treatises. His other writings include: *Goethes Verhältnis zu den organischen Naturwissenschaften* (1853), *Das Alter der Menschheit und das Paradies*, with Franz Unger

Schmidt, Adolf, *Der Darwinismus* (1873) (8th ed., 1884); *Die Saugthiere in ihrem Vorkommen* (1884).

SCHMIDT, WILHELM ADOLF (1812-87). A prominent German historian, born in Berlin, where he studied history and philology, and in 1839 established himself as lecturer. In 1845 he became professor there, in 1851 at Zurich, and in 1856 at Jena. As a member of the Reichstag in 1847-6, he belonged to the National Liberal Party. His more important works include: *Geschichte der Deutscher Glaubensfreiheit im ersten Jahrhundert der Kaiserthürschaft und des Christenthums* (1847); *Preussens deutsche Politik* (3d ed., 1867); *Zeitgenössische Geschichte: I. Frankreich von 1815 bis 1830, II. Oesterreich von 1830 bis 1848* (1859); *Elsas- und Lothringen* (3d ed., 1870); *Publication de la révolution française publiée sur les papiers inédits du département et de la police secrète de Paris* (1867-71); *Pariser Zustände während der Revolutionszeit 1789-1800* (1874-76); *Das Perikleische Zeitalter* (1877-79); *Abhandlungen zur alten Geschichte* (1888). He edited the 8th issue of Becker's *Weltgeschichte*, 22 vols. (Leipzig, 1874-79). Consult *Landwehr, Zur Erinnerung an Adolf Schmidt* (Berlin, 1888).

SCHMIDTLEIN, schmit'lin, JAKOB. A German theologian. See ANDREE, JAKOB.

SCHMIDT RIMPLER, rim'pler, HERMANN (1838-). A German ophthalmologist, born in Berlin and educated there. After acting as clinical assistant to Gräfe he went in 1871 to Marburg, where he started a university clinic for diseases of the eye, and whence in 1890 he was called to Göttingen. Soon afterwards he went to Halle. He wrote *Feber Blindsein* (1882), *Augenheilkunde und Ophthalmoskopie* (1885; 7th ed., 1901), and *Erkrankungen des Auges im Zusammenhang mit anderen Krankheiten* (1898).

SCHMITZ, shmits, BARXO (1858-). A German architect, born in Düsseldorf and trained in the academy of that city. He received the first prize for his design of a memorial to Victor Emmanuel in Rome and built a national monument in Indianapolis, a museum in Linz, and another in Stockholm, the new synagogue in Berlin, and the Kaiser Wilhelm Memorial on the Kyllhäuser, which, with memorials to the same Emperor at the Porta Westphalia and at Rheineck, near Coblenz, ranks him as one of the foremost of German architects.

SCHMOLLER, shmöl'ler, GUSTAV (1838-). A distinguished German economist and historian, born at Heilbronn. He studied at Tübingen, in 1864 became professor extraordinary, and in 1865 professor ordinary at Halle. In 1872 he was called to the University of Strassburg, in 1882 to the University of Berlin. Schmoller gained at a comparatively early age a reputation as a leader of the historical school of economics. The great majority of his numerous books have been devoted to some phase of industrial history. He has done besides much work in the history of economic thought. Among his best known works are: *Strassburg zur Zeit der Zunftkämpfe* (1875); *Zur Literaturgeschichte der Staats- und Sozialwissenschaften* (1888); *Das Merkantilensystem*, translated, *The Mercantile System* (1896); *Grundriss der allgemeinen Volkswirtschaftslehre* (1900). Since

1881 Schmoller has been editor of the *Jahrbuch für Gesetzgebung, Verwaltung und Volksverehrtheit im Deutschen Reich*. From 1878 to 1903 he edited a series of monographs entitled *Staats- und Sozialwissenschaftliche Forschungen*.

SCHMUCK'ER, BEALE MELANCTHON (1827-88). An American Lutheran theologian, best known for his liturgical labors. He was born at Gettysburg, Pa., and studied there in college and in the theological seminary. He held pastoral charges in Martinsburg, Va. (1845-51), and in Allentown (1852-62), Easton (1862-67), Reading (1867-81), and Pottstown, Pa. (1881-88). With Mann and Gernam he edited the American revision of the *Hullesche Nachrichten*. Schmucker founded many Lutheran schools and took a prominent part in the preparation of the common service now in use in the Lutheran Church.

SCHMUCKER, or SMUCKER, SAMUEL MOSHEIM (1823-63). An American author. He was born at New Market, Va., graduated at Washington College in Pennsylvania in 1840, became a Lutheran minister, was admitted to the bar in 1850, and devoted most of his later years to writing. His publications include: *Life of John C. Fremont, with his Explorations* (1856); *Life and Times of Alexander Hamilton* (1856); *Life and Times of Thomas Jefferson* (1857); *The Yankee Slave-Driver* (1857); *Life of Dr. Elisha Kent Kane and Other American Explorers* (1858); *Life and Times of Henry Clay* (1859); *Blue Laws of Connecticut* (1860); *History of the Modern Jews* (1860); and the first volume of *A History of the Civil War in the United States* (1863).

SCHMUCKER, SAMUEL SIMON (1799-1873). An American Lutheran divine. He was born at Hagerstown, Md.; graduated at the University of Pennsylvania, 1819; studied in Princeton Theological Seminary, and was ordained a Lutheran minister in 1821. He was pastor of a church in Newmarket, Va., 1820-26; professor of didactic theology and chairman of the faculty in Gettysburg Theological Seminary 1826-64. He was the leader of the low-church Lutheran party who are connected with the General Synod, and was better known outside of his communion than any other Lutheran minister. Of his numerous publications may be mentioned: *Fraternal Appeal to the American Churches on Christian Union* (1838), which prepared the way for the formation of the Evangelical Alliance; *The American Lutheran Church* (1851); *The Church of the Redeemer as Developed Within the General Synod of the Evangelical Lutheran Church* (1870).

SCHNAASE, shnä'ze, KARL (1798-1875). A distinguished German art-historian and jurist, with Rumohr, Waagen, and Kugler, one of the founders of modern art-history, who conceived art in its connection with the universal, cultural, and intellectual life. Born at Danzig, he began the study of law in 1816 and matriculated at Heidelberg also under Hegel, whom he followed to Berlin. Assessor at Königsberg in 1826, he was promoted to other positions at Marienwerder (1829), and at Düsseldorf, where he took great interest in the newly awakening artistic life, and in 1848 was appointed councillor at the Supreme Court in Berlin, but resigned in 1857 to confine himself to his studies. With Grüneisen and Schorr he founded in 1858 the *Christliche Kunstblatt*, sojourned in Rome in 1865-66, and settled

at Wiesbaden in 1867. As an author he made himself first known by his *Niederländische Kunst* (1834), which bore witness to his philosophico-historical conception of art, and was followed by numerous minor treatises and essays. His masterpiece, however, is the *Geschichte der bildenden Künste* (1843-64; 2d ed., 1865-79), which created an epoch in the development of the modern science of art. In contradistinction to other art-histories, based on formal criticism, Schnaase in it sought to deduce the manifestations of artistic production from the physical, moral, and intellectual peculiarities of nations and to demonstrate how all other vital elements pervade artistic life. With rare universality of scientific training he treated art-history as an integral part of the history of civilization. Consult his biography by Lübke (Stuttgart, 1879).

SCHNABEL, shmä'bel, JOHANN GOTTFRIED (c.1690). A German author, who was known under the pseudonym of Gäsander. During a part of his career he was in the service of Count Stolberg, but very few other facts concerning him are known. He wrote some of the best "Robinsonaden," or imitations of *Robinson Crusoe*, that appeared in German, such as *Wunderliche Fata einiger Seefahrer* (1731-43), *Die Inseln in Südmeere* (re-published 1826), and the famous *Die Insel Felsenberg* (re-published 1827).

SCHNECKENBURGER, shmëk'en-böörk-ër, MAX (1819-49). A German poet, born in Thalheim, Württemberg. He was partner in an iron foundry at Burgdorf, near Bern. His best known poem, *Die Wacht am Rhein*, although composed in 1840, did not become famous until the outbreak of the Franco-Prussian War. It was set to music by Karl Wilhelm.

SCHNEEBERG, shmä'bërk. A town in the Kingdom of Saxony, Germany, 19 miles by rail southeast of Zwickau (Map: Germany, E 3). Mining and lace-making are the main industries. Kobalt is chiefly mined. The Schneberger brand of snuff is well-known. The late Gothic church contains a fine crucifixion by Cranach the elder. Population, in 1900, 8752.

SCHNEIDEMÜHL, shmä'de-mül. A town of the Province of Posen, Prussia, 153 miles by rail northeast of Berlin (Map: Prussia, G 2). The town has handsome churches, a Catholic seminary, and a provincial deaf and dumb asylum. There are important glass works. Population, in 1900, 19,655, of whom 6399 were Protestants.

SCHNEIDER, shmä'dër, FRIEDRICH (1786-1853). A German composer, born at Alt-Waltersdorf, Saxony. He attended the Zittau Gymnasium and later the Leipzig University. In 1821 he was called to Dessau as Court Kapellmeister, having become famous the year previous by the production of his great oratorio, *Das Weltgericht*. While at Dessau he did much toward perfecting the Court orchestra, conducted the Singakademie, established the 'Lieder-fafel,' and founded a school of music in 1829, which flourished until 1854. Among his works are the oratorios, *Die Sündflut*, *Christus der Meister*, *Pharus*, *Gethsemane* and *Golgotha*, and *Absalom*. He also wrote masses, motets, pianoforte and violin music, symphonies, and songs.

SCHNEIDER, JOHANN GOTTLIB (1750-1822). A German classical philologist, born in Saxony,

and educated at the universities of Leipzig and Göttingen. In 1776 he was appointed professor of ancient languages and history at the University of Frankfurt on the Oder, and in 1814, when the university was moved to Breslau, he went there as university librarian. He published many editions of the classical writers, particularly those relating to natural history. These include the works of Elhan, Alexander, and the *Scriptores Rei Rusticæ*; he further edited Xenophon, Varro, Aristotle's *Poetics*, *Natural History*, *Economics*, *Physics*, etc. One of the largest of his publications was a critical *Griechisch-deutsches Wörterbuch*, in 2 vols. (Züllich, 1797-98; 3d ed., Leipzig, 1819-21). Consult Bursian, *Geschichte der klassischen Philologie in Deutschland* (Leipzig, 1883).

SCHNEIDER, LOUIS (1805-78). A German actor and author, born in Berlin, the son of a musical conductor, whom he accompanied on his travels until, in 1829, he secured an engagement at the royal theatre in Berlin. For twenty-eight years a great favorite as a comedian there, he wrote several plays and operettas, the most successful of which were *Der Heiratsantrag auf Helgoland*, *Der Schauspieldirector* and *Der Kuckucker und die Parade*. When, in 1848, he retired to Potsdam, Frederick William IV. appointed him his reader and made him an aule councillor, in which capacity he continued under William I. During the campaigns of 1866 and 1870-71 he accompanied the headquarters of the army as reporter for the *Staats-Anzeiger*. Besides the historical novel, *Der böse Blick* (2d ed., 1871), he published: *Geschichte der Oper und des königlichen Opernhauses in Berlin* (1852); *König Wilhelm* (1869); *Kaiser Wilhelm*, 1867-71 (1875). Two works appeared posthumously and aroused great interest: *Aus meinem Leben* (1879-80) and *Aus dem Leben Kaiser Wilhelm* (1888).

SCHNEIDEWIN, shmä'de-vin, FRIEDRICH WILHELM (1810-56). A German classical scholar. He was born at Helmstedt, and was educated at Göttingen, where he was professor of classical literature from 1837 until his death. His works include *Delectus Poësis Græcorum Elegiacæ, Iambicæ, Melicæ* (1838-39); *Beiträge zur Kritik der Pœta Lyrici Græci* (1844); Martial's *Epigrammata*, with critical commentary (1842; text, 1853 and 1866); and Sophocles, with critical commentary (7 vols., 1849-54, frequently re-edited by A. Nauck). After 1846 he edited the well-known *Philologus*, which he had founded.

SCHNETZ, shmëts, JEAN VICTOR (1787-1870). A French historical and genre painter. He was born in Versailles, and studied in Paris under David, Regnault, Gros, and Gérard. He is important as marking a transition between the Neo-Classicists of the beginning of the nineteenth century and the Romanticists. Schnetz was made a member of the Institute in 1837, and director of the French Academy at Rome in 1840. Among his best works are the decorations of the ceiling in the Septième Salle, in the Louvre; "Vow to the Madonna" (Luxembourg); "Gypsy Woman Foretelling the Future of Sixtus V." (1820, replica Raczyński collection, Berlin); the "Vintagee Asleep;" "Bride of the Goutard." His best historical painting is "Saint Elizabeth," in Notre Dame des Bonnes Nouvelles, Paris.

SCHNITZER, shnit'ser, EDUARD. A German painter. (See EMILY PASTOR.)

SCHNITZLER, shnit'sler, JOHANN (1835-1907). An Austrian physician, famed as a pulmonary specialist, born at Gross-Kamizsa, Hungary, and educated at Budapest and Vienna. He was assistant in Oppolzer's clinic from 1863 to 1867, and in 1878 became professor in the University of Vienna. He was the principal founder of the Vienna polyclinic. He wrote: *Pneumatische Behandlung der Lungen- und Herzkrankheiten* (1875); *Diagnose und Therapie der Lungen- und Tracheostenosen* (1877); and *Leucosiphosis und ihr Verhältnis zur Lungenschwindsucht* (1880).

SCHNORR VON CAROLSFELD, shnör fön karölsfeld, JULIUS (1794-1872). A German historical and religious painter. He was born at Leipzig, where he received his first instruction from his father, the painter Johann Veit Schnorr (1764-1841). He afterwards studied in the Academy at Vienna, from which he succeeded with the group of painters headed by Overbeck, going to Rome in 1815. (See PRE-RAPHAELITES.) His share in their joint commission to decorate the Villa Massimo was a fresco of Orlando Furioso—his principal work at Rome. In 1827 he was appointed professor in the Academy of Munich and commissioned by King Louis I. to decorate five rooms of the Königsbau with frescoes from the Nibelungenlied, and three rooms in that part of the royal palace called the Festsaalbau with encaustic paintings of subjects from the history of Charlemagne, Frederick Barbarossa, and Rudolph of Habsburg. In 1846 he was made professor in the Academy and director of the picture gallery at Dresden.

Schnorr's painting shows the general characteristics of the Nazarite Brotherhood (see OVERBECK; PRE-RAPHAELITES), except that it is less extreme, both in spirit and technical methods. His *Bibel in Bildern*, an admirable work, enjoyed wide popularity. His principal easel paintings include the "Alms of Saint Roche" (Leipzig, Museum), and the "Family of John the Baptist Visiting the Family of Christ" (Dresden Gallery). Consult Valentin, in Dohme, *Kunst und Künstler des XIX. Jahrhunderts* (Leipzig, 1882).

SCHNORR VON CAROLSFELD, LUDWIG FERDINAND (1789-1853). A German painter, born at Leipzig, brother of the preceding. He studied at the Vienna Academy, of which he became a member in 1835, and was appointed custodian of the Belvedere Gallery in 1841. His works include "The Erl-King" (1821, Ferdinandum, Innsbruck); "The Liberation of Peter" (1836, Dresden Museum); and "Christ Feeding the Four Thousand" (1839, ib.).

SCHOELCHER, shöl'shär', VICTOR (1804-93). A French politician, born in Paris. He is chiefly known as an advocate of the abolition of slavery in the French colonies. With a view to studying all the aspects of the question, he traveled in Mexico, Cuba, and the United States in 1829. In 1848, as Under Secretary for the Navy, he secured the passage of a law abolishing slavery in the French colonies. He was a member of the Constituent Assembly and of the National Assembly from 1848 to 1850 and voted with the Extreme Left. Expelled from France after the coup d'état of December 2, 1851, he remained in England till the fall of the Second Empire,

when he returned to France, and during the siege of Paris commanded the artillery of the National Guard. Among his writings are an English *Life of Haendel* (1857); *Des colonies françaises. Abolition immédiate de l'esclavage* (1842); *La jamaïque, la propriété et le christianisme* (1837); *Le vrai Saint-Paul* (1879); and *Vie de Toussaint Louverture* (1889).

SCHÖFFER, shöf'fer, PETER (c.1425-c.1503). An early German printer. He was born at Gernsheim, and in early life was a copyist in Paris. About 1450 he became an assistant in the printing establishment of Gutenberg and Fust, at Mainz. After the retirement of the former, he became Fust's partner, and with him printed the *Psalter* (1457). He is said to have introduced many improvements in the art of printing, but his claim to the discovery of the method of casting metal types is not generally recognized. He married the daughter of Fust.

SCHOFIELD, sköf'feld, JOHN McALLISTER (1831-). An American soldier, born in Chautauque County, N. Y. He graduated at West Point in 1853; was assistant professor of natural and experimental philosophy there from 1855 to 1860, and was then for a time professor of physics at Washington University, Saint Louis, Mo. On the breaking out of the Civil War he became major of the First Missouri Volunteers, served as chief of staff for General Lyon during the operations in Missouri, and took part in the battles of Dug Spring and Wilson's Creek. Afterwards as brigadier-general of volunteers he commanded the State troops and the district of Saint Louis, until placed in command of the Army of the Frontier in 1862. In November, 1862, he was promoted to the rank of major-general of volunteers. In 1864 he was assigned to the command of the Army of the Ohio. In Sherman's campaign in Georgia he commanded the Twenty-third Corps. He received his appointment as brigadier-general in the Regular Army for his services at the battle of Franklin (q.v.), November 30, 1864, in which he defeated the Confederates under General Hood. With his command he was transferred to North Carolina, and was appointed to the command of that department. On February 22, 1865, he occupied Wilmington, fought the battle of Kinston March 8-10th, and joined Sherman at Goldsboro, March 22, 1865. He was Secretary of War *ad interim* from May, 1868, to March, 1869; was then placed in command successively of the Department of the Missouri and of the Division of the Pacific. In July, 1876, he was appointed superintendent of the United States Military Academy, and from 1882 to 1883 had command of the military division of the Pacific. He then commanded successively the divisions of the Missouri and of the Atlantic, and was Commanding General of the United States Army from 1888 to 1895, when he retired with the rank of lieutenant-general. He published *Forty-six Years in the Army* (New York, 1897).

SCHOLASTICISM (from Lat. *scholasticus*, Gk. σχολαστικός, *scholastikos*, relating to school, learned, from σχολή, *scholē*, learning, leisure, school). A term applied in its commonest acceptation to the teaching of those who devoted themselves in the mediæval schools to the sciences, especially philosophy and theology. Not only the latter branches, however, but the whole

speculative science of the Middle Ages, is sometimes included under the term scholasticism. This, however, is obviously an exaggeration, since mediæval speculation ran in such markedly diverging channels as the Arabian, Jewish, and Greek philosophies, while against the current of genuine scholasticism there were all along two directly anti-scholastic movements—pure rationalism and mysticism. Again, scholasticism is not unfrequently made to stand for a method of demonstration chiefly characterized by fideism, apriorism, logomachy, endless subtlety, and hair-splitting, whose sole organ is supposed to be the deductive syllogism. This interpretation, however, is justified only as regards the method of its adherents of inferior rank, and of its formative and declining periods.

Scholasticism is essentially a *Weltanschauung*—a synthetic view of the universe, embracing the world, man, and God with their inter-relations, in so far as this is attainable by the aid of experience, reason, and revelation cooperating in due subordination. Thus regarded it is, subjectively, one of the countless efforts of the human mind to obtain a unified comprehension of reality. Objectively and in its developed form, scholasticism is a systematized result of this striving for unity, an orderly synthetic view of reality.

Among the peculiarities which on the whole differentiate it from other world-views the following especially deserve attention: (1) The completeness of its criteria, and consequently of the materials which, resulting from their co-ordination, combine in its composition. Consciousness, sense-experience, intellectual intuition, reasoning, inductive and deductive demonstration, human testimony conjoin in it with divine revelation in the endeavor to ascertain the ultimate nature of the reality that presents itself to the mind. Sense-experience and the inductive process were, it is true, inadequately and uncritically employed by the mediæval scholastics, but this defect has been made good by their modern successors. (2) Its method combines analysis with synthesis, induction with deduction—a union which, harmonizing the process of inquiry and proof with man's dual nature, can alone, it is asserted, engender intellectual perfection. (3) The continuity of its evolution. The beginnings of scholasticism are traced historically to Socrates, the results of whose search for the permanent element in the contingent, the universal in the particular, were developed by Plato. The Platonic system was pruned of its idealistic exuberances and its extremely dualistic view of human nature by Aristotle. Into the Greek synthesis Saint Augustine built many of the conceptions derived from Christian revelation; and thus enlarged and interpreted, it passed through the more immediately formative stages of the earlier Middle Ages, and through the hands of Saint Anselm, to receive a mature development in the thirteenth century under the influence of Saint Thomas Aquinas. Then followed the age of decline and arrested progress. In the second half of the nineteenth century it came forth in renewed vigor, and has since been assimilating to its organism the results of philosophical criticism and empirical research. The scholastic synthesis is therefore the outcome of a rational eclecticism on independent and original lines.

Its philosophical content is mainly derived

from Aristotle, though in following him the schoolmen were by no means servile. Other systems, Platonism, Neo-Platonism, Stoicism, Pythagoreanism, as well as the philosophical speculations of the Fathers, enter into its body. Its theological content is the truths of revelation as gleaned from the Bible, ecclesiastical tradition, and the authoritative pronouncements of the Church. Scholasticism has also been defined as the application of Aristotle to theology, or the expression of the facts and realities of revelation in the mind-language of the Peripatetics. The definition is true so far as it goes, but is inadequate. The inference, however, should not be drawn that the Catholic Church has committed herself to Aristotle's philosophy. She makes use of it, indeed, as a standard of expression, but she indorses none of its tenets that are not necessarily accepted by plain common sense; for, like every other philosophy, it contains elements implicated in the very nature of the mind, combined with other peculiar debatable features which are the product of human ingenuity.

HISTORY OF THE SCHOLASTIC MOVEMENT. The more immediate history of mediæval scholasticism may be divided into four periods: (1) The formative period, reaching from the ninth to the closing of the twelfth century. (2) The period of maturity. (3) The period of decline. (4) The subsequent stage culminating in what is known as Neo-scholasticism of the present day. Two distinct currents run through the history of mediæval speculation—the strictly *scholastic* and the *mystical*. Indications of the divergence of these two streams are noticeable in the Patristic period, but the distinction became broad and deep in the Middle Ages. Scholasticism represents the speculative, mysticism the contemplative phase of thought. Scholasticism strives to comprehend truth by the investigations of reason; mysticism by the methods of contemplation, by the sympathies and emotions of the heart. The two schools, however, were at one in their reverence for Christian truths, and whatever their differences on other points, they supplemented each other's teaching and, on the whole, so counterbalanced one another as to prevent either from pushing its doctrine to a dangerous extreme.

During the first period the broader outlines of the scholastic synthesis were gradually laid. The first attempts were vast accumulations of raw material, general cyclopedias or summaries of the intellectual possessions of the age, like the *Origines* of Isidore of Seville, the *De Natura Rerum* of Bede, and the *De Universo* of Rhabanus Maurus. Gradually the special philosophical problems differentiate themselves, and the broken threads of the ancient and patristic traditions are gathered up. The dominant subject of study was dialectic, and the question of the nature of universals, with which the period may properly be said to have opened, mainly absorbed attention. There speedily developed a ridiculous despotism of formal logic, mainly due to the wrong philosophical orientation of the early schoolmen owing principally to their meagre supply of philosophical literature. The earlier scholastics drew their doctrines from conflicting sources. Mutilating one author, misunderstanding another, ignoring in all the historical and logical relation, they elaborated irregular systems without always knowing how to escape in-

In dialectics Aristotle held undisturbed sway, and metaphysics was a bizarre union of Aristotle and Platonic ideas. From the thirteenth century onward the theory of the principle of individuation from Aristotle, the scheme of the categories, the Platonic doctrine of ideas was brought into the front together with the Aristotelian theories of substance, nature, person, and the categories. Indirectly, through Saint Ambrose and Boethius, the composition of matter and form was known, though this organic doctrine of the Peripatetics plays but an insignificant part and was always misunderstood. Cosmological teachings show the same uncertainty. Under the influence of the Platonic theory of the world soul, or the *patium* of the Stoics, an autonomous life was attributed to nature, though, on the other hand, some of the ablest of the schoolmen (Abélard, John of Salisbury) maintained with Aristotle the individuality of every natural substance, two theses that it is impossible to reconcile.

Up to the thirteenth century the psychology of the schools is principally Augustinian and Platonic. Man is a microcosm, a mirror of the universe. From Saint Augustine is taken the division of faculties and the theory of knowledge. To these studies on the psychical activities were united observations on the empirical and physiological life, inspired by Arabian science. On the nature of man, whatever concerned the origin and destiny of the soul was eagerly studied. The relation between body and soul was explained on the Platonic theory—the soul being held to be united to the body as the pilot to the ship, the rider to his horse. Although the Aristotelian definition of the soul as 'the *actus primus* of the body' was well known, the soul was not held to be the *substantial form* of the organism, for this, according to the conceptions of the time, would have been to regard it as a property of matter. Theodicy was always considered as one of the most important chapters in scholastic philosophy. The Fathers of the Church, the pseudo-Dionysius, and Boethius had left long dissertations on the existence of God; therein are found the Aristotelian ideas on the prime mover, the Neoplatonic conceptions of the demiurge, of a Supreme Being, and the Pythagorean traditions on number. On the whole, if we except theodicy, which, fragmentary though it was, remained faithful to the true genius of scholasticism, in the philosophy of this period the effort to amalgamate heterogeneous and incompatible elements was the chief defect.

The scholastic movement reaches its fullest mediæval development in the thirteenth century with the great teachers of the age, Albertus Magnus, Saint Thomas Aquinas, Saint Bonaventura, and Duns Scotus. Its dominant traits are now: (1) Comprehensiveness. Acquainted with all the problems suggested by a complete philosophical system, the scholastics offer definite solutions ready for mutive coordination. (2) Individuality of the philosophers. The thirteenth century was a century of individualities. While all the great schoolmen agreed in a number of fundamental theories, each of them imprinted upon this common fund the mark of his personality. (3) The prominence given to psychological and metaphysical problems. In psychology, the genesis of knowledge and the nature of the soul; in metaphysics, the theories of matter and form, of the nature and of the origin of sub-

stances, of the principle of individuation sum up the main subjects of controversy.

The intensity of Christian faith among the contemporaries and successors of Charlemagne explains the ingress of scholastic philosophy upon the domain of theology. The dispute concerning predestination raised the problem of liberty and its relation to God's providence and justice; the controversy of Paschasius on the Eucharistic Presence occasioned dissertations on substance and accident; the dogma of the Trinity suggested discussions on the concepts of nature, individuality, person; the mystery of transubstantiation and of the divine simplicity provoked the study of physical processes. However, before long the philosophical questions were disengaged from their theological setting. Distinction between the two sciences was deduced from the diversity of their principles, their methods, and their special objects, a distinction which is explicitly laid down and developed in the first question of the *Summa Theologica* by Saint Thomas.

The decline of scholasticism followed rapidly on its maturity. The causes which led to its ruin acted slowly but steadily. Of these causes some are internal, the exhaustion of the movement itself; others external, the decline of studies, and the progressive encroachments of anti-scholastic philosophies. Lack of originality is the first symptom of this decay. From the fourteenth century the number of those who devoted themselves to the study of philosophy grew in colossal proportions. Universities multiplied, and thus facilitated the growth of philosophical pursuits. Entire orders engaged in the prevalent controversies. But these multitudinous philosophers no longer thought for themselves. They enrolled themselves with some great school, led by some illustrious thinker. As with all the writers of periods of decline, they were mere commentators upon the thoughts of others.

As schools increased individuality decreased. The thirteenth century was marked by distinct personalities; the fourteenth and fifteenth were periods of impersonal thought. Apart from the *Terminists* the schoolmen after the thirteenth century discovered no new modes of speculation. But terminism was a symptom of decay, for in its work is noticeable another mark of decomposition which was not slow to invade all scholasticism, the deterioration in the scholastic synthesis. The new theories, those of Occam, for example, were at ill accord, in more than one point, with the scholastic synthesis, without, however, being in conflict with its organic principles. The passionate disputes of the Terminists, Scotists, and Thomists also largely contributed to disturb the economy of scholasticism.

Scholasticism itself departed further and further from the dignified and precise language of the thirteenth century. Uncouth expressions which hitherto had appeared only sporadically and for the most part in Arabo-Latin translations multiplied rapidly from the fourteenth century; even the spelling in use with professors betrayed an unpardonable ignorance of Latin. Terminism and Scotism must assume the greater part of the responsibility for this decadence. And as defect in form engenders confusion of ideas there appears also a deterioration in scholastic methods. Under pretext of clarity, distinctions, sub-distinctions, terms, and counter-terms were

multiplied. These abuses were furthered by the progressive advance of an exaggerated dialectic. The thirteenth century looked upon dialectics in theory and practice as a mental discipline preparatory to the study of physics, metaphysics, and morals. The altering of this relation inevitably led to the despotism of formalism. There were some symptoms of this intellectual malady at the beginning of the fourteenth century; it progressed gradually until it had undermined the vitality of scholasticism.

Mental enervation became apparent in the intellectual centres of the time—the religious Orders and the universities. The former remained for the time the principal nurseries of science; but zeal for study lessened as discipline relaxed. Among the many teachers eager for quick results there were comparatively few who by personal and persevering effort rose above the prevailing mediocrity. The University of Paris fell rapidly from its grandeur, and scholasticism, which had risen with it, was dragged down in its fall. Yielding to intrigue, the Faculty of Theology trifled with academic ruses; they facilitated the 'actus scholastici,' shortened the years of study, and made examinations matters of form. The Faculty of Arts fell into a like condition and thus brought on its own ruin. The arts being an obligatory stage to theology, men with money and ambition had an obvious interest in abridging their study as much as possible.

While scholasticism as a movement was passing through these days of storm and stress its synthesis was preserved intact. Men of mental breadth and insight like Cajetan (1496-1534), Francisus Sylvesteris Ferrarionis (1474-1528), Bañez (1528-1604), Vasquez (1551-1604), Tolatus (1532-1596), and above all Suarez (1548-1617), preserved and developed the scholastic organism.

During the nineteenth century philosophers like Kleutgen and Stäckl in Germany; Ozanam, De Broglie, Farges, Blanc, Gardair, and many others in France; Liberatore, Sansoverino, Cornoldi, and Zigliara, in Italy; Balme and Cortes, in Spain; Ward and Harper, in England, have been bearers of the scholastic teachings to the present age. A strong impulse to the Neoscholastic movement was given by Leo XIII, in many public utterances, notably by his encyclical *Eterni Patris* (1879), in which he urges a return to the study of the great schoolmen, especially Saint Thomas, not, indeed, with a view to a wholesale reimportation of scholasticism in its full mediæval content, but with an eye to its extension, completion, and adaptation to the intellectual requirements and modes of thought of the present age. A valuable aid in this direction is the critical edition of the works of Saint Thomas now being published at Rome under the Papal auspices. The establishment at Louvain of the 'Institut Supérieur de Philosophie' under the presidency of M. Mercier was also largely due to the broad policy of Leo XIII. A systematic series of works on Neoscholasticism emanates from the Institute, as does likewise the *Revue Neoscholastique*, a quarterly now in its tenth year. The *Revue de Philosophie* (Paris), the *Philosophisches Jahrbuch* (Fulda), the *Annales de Philosophie Chrétienne* (Paris), and *Divus Thomas* (Piacenza) are among the well-known periodicals devoted to the same movement.

THE SCHOLASTIC SYNTHESIS. So much for the

history of scholasticism as a movement. The result, the synthesis, can be here barely touched upon. The scholastic sees the world of reality with the triple eye of sense, reason, and faith. These *argumta* are distinct, and each is in its limited sphere independent. They are all necessary to a complete survey of reality and, under normal conditions critically discernible, are mutually corroborative. Under their harmonious interaction the world of reality is seen to embrace Creator and creature, the latter emanating from the former as from its primary archetypal and efficient cause. The irrational world is synthesized in the rational, and by it, through a reasonable service active and passive, referred to its first principle and final end. The method, way, and means to this return of the creature to the Creator is manifest in the synthesis of both, the Incarnate Word and His organized economy. These are the broad lines of the scholastic synthesis.

Separated from the elements derived from revelation, the purely rational lines of the synthesis are the following. It is the aim of philosophy to interpret the universal order of things in its constituent, efficient, and final causes. That order is made up of four departments as manifested under as many ascending degrees of intellectual abstraction: (1) The *real* order which the mind considers but does not make, and which falls under the scrutiny of physics, mathematics, and metaphysics; (2) the *mental* order which the mind makes by reflectively considering its own acts, the sphere of logic; (3) the *moral* order which the mind makes by reflectively consideration of the acts of the will, the domain of ethics; (4) the *external* order which the mind makes in considering man's external productive acts, the order of the arts liberal and mechanical.

The supreme synthetic ideas of the metaphysical order are *act* (perfect determination) and *potency* (determinability). On these rests the distinction between the infinite—whose existence is demonstrated *a posteriori*—as *actus purus*, unalloyed perfection, and the finite being combining act with potency. The relations of God, the Infinite, to the finite are inferred from His intelligence and will, and are summed up under three:

(1) Exemplarism: The divine ideas, or the different phases of God's essence perceived by His intellect as imitable outwardly, are the ultimate ontological basis of all finite realities and the ultimate basis of their cognoscibility and our rational certitude. (2) Creationism: The finite proceeds from the Infinite as the term of the creative act. God's creative efficiency terminates at the very substance of the finite; in this conception the scholastic transcends the Aristotelian concept of the *causa matrix*. (3) Providence: The Creator is necessarily conservator and provider. The finality immanent in creation and directed to an ultimate rational purpose is conceived by the scholastics in a higher and more consistent light than it was by the ancient Greeks.

The mingling of potency and act, the determinable and the determined, shows itself in the finite by a triple composition—(1) that of matter and form; (2) the individual and the general essence; (3) essence and existence. (1) The duality of matter and form was derived from the Aristotelian theory of physical processes and trans-

metaphysics. In the corporeal world (e.g.) is constituted of a homogeneous and heterogeneous principle, of a principle of difference and unity, of passivity and activity. The one is matter, of the other form. Matter cannot subsist without form. The highest of the human soul and supernal spirits, can be without matter. Form is the root of specific matter of individuation; but in this primary matter must be considered in connection with quantitative dimensions. Form is to matter as act to potency. (2) In the finite individual the individuation and the abstract essence are not really, but only virtually distinct. This gives the mind a basis for abstracting the essence—the direct universal (*universale in re*)—and elaborating it by comparison and reflection into the reflex universal (*universale post rem in mente*). The individual is to the essence, the singular to the universal, as act to potency. (3) Essence and existence in the finite are really distinct after the analogy again of act and potency.

Mathematics and physics may be here dismissed. Scholastic physics was based on the Peripatetic and manifests its shortcomings, but together therewith an insight into physical processes and the phenomena of motion which theoretical physics of the present age cannot afford to despise.

Psychology was with the schoolmen, as with Aristotle, a branch of physics, a point of view to which recent physiological psychology has returned. The soul is united to the body as form to matter. The soul is therefore the root of unity and activity in the organism. From it all vital operation, vegetative, sensitive, intellective, appetitive, locomotive, proceeds. The immediate principles of these operations are the powers or faculties, all of which are rooted in the soul, though the senses—the inner and the outer senses and the sensuous appetites—are blended with the chemical matter of the organism, on which they therefore intrinsically and essentially depend. Other powers transcend the material organism as such, and, though dependent thereon for their object matter, operate with a certain autonomy of their own. These intrinsically dependent energies are the intellect and will. Being immaterial, they manifest the immateriality of their root, the substance of the soul. The soul is, therefore, no product of matter. It is the term of the creative act, and, being simple and immaterial, is necessarily incorruptible, i.e. immortal.

Scholastic epistemology is based on the principle that knowledge sensuous and intellective consists in the assimilation of object to subject—an assimilation engendered by the cooperation of the two. The stimulation of the psychic cognitive power by the object was called the *species impressa*, the reaction of the faculty the *species expressa*. In intellective cognition the object is presented through the phantasm from which the active intellect abstracts the intelligible species. In the wake of cognition follows appetite sensitive or intellective. The latter—the will—is like every other power necessitated as to its general object, the good as such; though in respect to this or that good it is undetermined and intrinsically free.

Ethics was dominated by the concept of finality immanent in man as it is in the universe. Man's objective end is the vision of the infinite truth and the enjoyment of the infinite good, i.e.

God. He is physically free, however, to place his end in the finite. If he do he will fail of his ultimate perfection and incur unending loss. The natural law of conduct is the reflection of the eternal law in consciousness. Acts are good or bad according as they are in accord or discord with human nature in its concrete existence. Special ethics and politics unfold and apply the natural law to the special individual relations of man.

There are obvious objections to the scholastic synthesis. It is accused of being one-sided, of neglecting the historic and inductive method, of being unprogressive, of merely unfolding what was already contained in received data, of bringing no new facts to light, but simply analyzing the facts at hand which it took for granted. All these and other such charges may with some obvious restrictions be admitted. Nevertheless scholasticism centred the human mind on certain fundamental truths essential to the complete spiritual development of the race.

SCHOLIASTS, skol'i-ästs (MGk. σχολιαστής, *scholiastēs*, commentator, from σχολιάζειν, *scholiázein*, to write commentaries, from σχολίω, *scholíō*, commentary, from σχολή, *scholē*, learning, school). A name applied to annotators of classical works, especially Greek. These commentaries, *scholia*, were written on the margin or between the lines of the manuscripts, and included explanations and interpretation of every kind. The earliest form of interpretation consisted of nothing more than glosses on difficult or unusual words, but with the Alexandrians learned comment in the larger sense began and continued through the Byzantine Age. In Latin we have important scholia to Terence, Vergil, Horace, Statius, and others. For a history of the Greek annotators of antiquity, consult Wilamowitz-Muellendorf, *Herakles*, introduction to vol. i. (Berlin, 1889).

SCHÖLL, shöl, ADOLF (1805-82). A German archaeologist and critic, born at Brünn, Austria, and educated at Tübingen and Göttingen. In 1843 he was appointed director of the Art Institute in Weimar, where he was made librarian-in-chief in 1861. He wrote *Die Tetralogien der attischen Tragiker* (1839), *Sophokles* (1842), *Weimars*

Merkwürdigkeiten (1847), and many contributions to the criticism of Goethe. Consult the biography by his son Friedrich (Berlin, 1883).—His son RUDOLF (1844-93) was born in Weimar and after studying at Göttingen and Bonn traveled in Italy with Theodor Mommsen. He was successively professor at Greifswald, Jena, Strassburg, and Munich. He wrote *Lups Dondorum Tabularum Reliquie* (1866) and *De Syaccharis Atticis* (1875).—His brother FRANZISCH (1850—) studied at Göttingen and Leipzig, and in 1877 became professor at Heidelberg. Best known as a pupil of Ritschl, Schöll was one of the co-editors of the Teubner text of Plautus (1892-95).

SCHOLL, shól, AUBRIEN (1833—). A French journalist, dramatist, and miscellaneous writer, born at Bordeaux. Having studied at the Collège de Bordeaux, he went to Paris in 1859. He founded successively *Le Vain Joueur*, *Le Club*, *Le Jockey*, *Le Lognon* (1869). After the Franco-German War he was on the staff of *L'Évenement* (1872-82), then editor-in-chief of *Le Voltair* (1882-83), and an editor of *L'Echo de Paris* (1883-85). Schöll published in 1851 a volume of verses, *Denise*. He collaborated in many dramas and showed his clever and piquant wit at its best in *L'esprit du boulevard* (1883) and *L'amour appris sans maître* (1891).

SCHÖLL, shól, MAXIMILIAN SAMSON FRIEDRICH (1766-1833). A German historian and diplomat, born at Harskirchen, in Nassau-Saarbrücken. Having embraced the principles of the French Revolution, he for a time held office in Strassburg, but was compelled to flee to Germany. Subsequently he held various diplomatic positions in the Prussian service, and he accompanied Hardenberg to the congresses of Vienna, Aix-la-Chapelle, Teplitz, Troppau, Laibach, and Verona. His many published works include: *Histoire de la littérature romaine* (1815); *Récueil de pièces officielles destinées à déjouer les français sur les événements qui se sont passés depuis quelques années* (1814-16); *Récueil des pièces relatives au congrès de Vienne* (1816-18); a continuation of Koch's *Histoire abrégée des traités de paix*, etc. (1817-18); *Archives historiques et politiques* (1818-19); *Tableau des révolutions de l'Europe* (1823); and *Cours d'histoire des états européens depuis le commencement de l'empire romain jusqu'en 1789* (1830-33), his most elaborate work.

SCHOLLEN, skól'len, JAN HENDRIK (1811-85). A Dutch theologian. He was born at Vluster, near Utrecht, studied at Utrecht, and was minister at Meerkerk (1838-40). He was professor of theology at the Athenaeum of Franeker, 1840-43, and in the University of Leyden, 1843-81. Scholten was the head of the critical school of theology in Holland, and in some of his views approached the position of the Tübingen school of Germany. He published many works, the greater number dealing with questions of New Testament criticism or theology. Most of them are accessible in French or German translations. He summed up his teaching in his farewell address, *Afschiedsrede* (1881). Consult Knuenen, *Levensbericht van J. Henricus Scholten* (Amsterdam, 1875).

SCHOLZ, shólts, BERNHARD (1835—). A German composer, born at Mainz. He studied the piano with Ernst Pauer and theory with S. W. Dehn. In 1856 he was appointed teacher

of theory at the Royal School of Music in Munich, and from 1859 to 1865 was kapellmeister at the Court Theatre in Hanover. In 1883 he succeeded Raff as director of the Hoch Conservatory at Frankfurt. Besides the operas *Carlo Rosa* (1858), *Mouquau* (1870), *Der Trompeter von Säckingen* (1877), and *Ingo* (1898), he composed a requiem, cantatas, a symphony, a string quintet, and other chamber music, choral works, and songs. His best known work is his setting of Schiller's *Lied von der Glocke*, for solo, chorus, and orchestra.

SCHÖMANN, shóm'án, GEORG FRIEDRICH (1793-1879). A German philologist and archaeologist. He was born at Stralsund, and after studying at Greifswald and Jena was professor of classical literature at the former university from about 1826 till his death. His works, which refer chiefly to Greek law and literature, are distinguished by their profundity and clearness. Among the most important are: *Der attische Prozess* (with Meier, 1824, reëdited by Lipsius, 1883-87); *Griechische Altertümer* (1850-59; Eng. trans. by Hardy and Mann, 1880); several grammatical works and critical editions of Isaacs (with translation, 1831); Phalaris's *Agis et Cleomenes* (1839); Eschylus's *Prometheus* (1841); Cicero's *De Natura Deorum* (1850); and Hesiod's *Theogony* (1868). Selections from his minor works on Greek history, mythology, and archaeology were published in his *Opuscula Académica* (1856-57).

SCHOMBERG, shóm'bérk, FREDERICK HERMANN, Duke of (1615-90). A German soldier of fortune, born at Heidelberg. He served in the army of the United Provinces and in the French army. During the War of Liberation in Portugal he held important commands and finally succeeded in compelling Spain to recognize the independence of that country (1668). In 1675, again serving with the French army in Catalonia, he won the grade of marshal. He left France in 1685, and after serving a short time with the Elector of Brandenburg was appointed by the Prince of Orange his second in command in the English expedition of 1688. Afterwards (1689) he received the title of Duke of Schomberg in the English peerage, was made a Knight of the Garter, and also master of the ordnance, besides receiving a grant of £100,000 from Parliament. In the expedition against Ireland he took a prominent part, but was killed at the battle of the Boyne.

SCHOMBURGK, shóm'búrk, SIR ROBERT HERMANN (1804-65). A traveler and explorer, born at Freiburg, in Prussian Saxony. He emigrated to the United States in 1829, and the next year removed to Anegada, one of the British West India islands, which he thoroughly explored. In 1835 the Royal Geographical Society sent him on a scientific expedition to British Guiana, where he explored a vast tract of territory previously almost unknown. In 1840 he was sent to Guiana, where he spent another four years exploring the Hinterland and surveying the boundaries of the colony. The so-called 'Schomburgk line' played an important part in the controversy between Great Britain and Venezuela. (See VENEZUELA.) In 1844 he was knighted. Four years later he was appointed British consul at Santo Domingo, and in 1857 he was promoted to be Consul General at Bangkok. His published

1847). *Vegetation of the Alps* (1847); *Gartenbau, Obstbau, Weinbau, Forstbau* (1849); *Lehrbuch der Botanik* (1850); *Historie der Botanik* (1852). His most famous botanical discovery was that of the *Vicia regia* (q.v.).

SCHÖN, shôn, HEINRICH THEODOR VON (1773-1856). A Prussian statesman, born in Lithuania. He studied law and political science at Königsberg. In 1793 he entered the Government service and was rapidly promoted, serving as governor. After the Peace of Tilsit he rendered great assistance in carrying out the reforms of Stein and Hardenberg, and to him is attributed the authorship of the *Politisches Testament*, which Stein issued upon his retirement from office. In 1816 Schön was appointed Governor of West Prussia, and eight years afterwards of the whole Province of Prussia. Under his administration many reforms were made. He was an ardent liberal, and it was partly through his efforts that upon the accession of the new King in 1810 a demand was made for a constitution. Schön was made Minister of State, but his ideas were too advanced for Frederick William IV., and he found it expedient in 1842 to retire from political life. His memoirs and correspondence were published by his son under the title of *Aus den Papieren des Ministers und Burggrafen von Marienburg Theodor von Schön* (1875-83). Consult Sealey, *Life and Times of Stein* (Cambridge, 1878).

SCHÖNBACH, shôn'bák, ANTON (1848—). An Austrian Germanic philologist, born at Rumburg, Bohemia. After studying in Vienna and under Scherer and Müllenhoff, in Berlin, he began to lecture at Vienna in 1872, and was appointed professor at the University of Graz in 1873. Besides valuable editions of Old-German sacred poetry and prose, such as *Ueber die Marienklagen* (1874), *Altddeutsche Predigten* (1886-91), *Ansbach altddeutscher Seapensformeln* (1893), he published *Beiträge zur Charakteristik Hawthornes* (1884); *Walthier von der Voghelde* (2d ed., 1895); *Ueber Hartmann von Aue* (1894); *Das Christentum in der altddeutschen Heldendichtung* (1897); *Gesammelte Aufsätze zur neueren Litteratur in Deutschland, Oesterreich, Amerika* (1900); *Studien zur Erzählungslitteratur des Mittelalters* (1898-1902); and *Ueber Lesen und Bildung* (6th ed., 1900), which met with great approbation. Jointly with Bernhard Souffert he edits the *Grazer Studien zur deutschen Philologie* (Graz, 1895 et seq.).

SCHÖNBEIN, shôn'bain, CHRISTIAN FRIEDRICH (1799-1868). A German chemist, born at Metzingen, Württemberg. He studied natural science at Tübingen and Erlangen and became professor at Basel in 1828. In 1839 he discovered ozone and in 1845 invented gun cotton, from which, by dissolution in a mixture of alcohol and ether, he obtained the material called collodion, which soon found application in surgery. His works include: *Das Verhalten des Eisens zum Sauerstoff* (1837); *Beiträge zur physikalischen Chemie* (1844); *Ueber die Erzeugung des Ozons* (1844); *Ueber die langsam- und rasche Verbrennung des Körpers in atmosphärischer Luft* (1845). For his biography, consult Hagenbach (Basel, 1868) and Kahlbaum and Schaer (Leipzig, 1901).

SCHÖNBERG, shôn'bërk, or MÄHRISCH-SCHÖNBERG. A town of the Province of Moravia,

Austria, on the River Tessa, 159 miles by rail east southeast from Prague (Map: Austria, E 2). It lies in a charming valley, has a handsome church, and a weaving and agricultural school. It is an industrial centre, with large manufactures of textiles. Population, in 1900, 11,636, mostly Germans.

SCHÖNBERG, GUSTAV VON (1839—). A German economist, born in Stettin and educated in Bonn and Berlin. In 1869 he went to Basel, in 1870 to Freiburg, and in 1873, as professor of political economy, to Tübingen, where in 1899 he was appointed chancellor of the university. Among his works are: *Zur wirtschaftlichen Bedeutung des deutschen Zunftwesens im Mittelalter* (1868); *Die Volkswirtschaft der Gegenwart* (1869); *Die Frauenfrage* (1873); *Die sittlich-religiöse Bedeutung der sozialen Frage* (2d ed., 1876); *Zur Handwerkerfrage* (1876); *Sozialpolitik des Deutschen Reichs* (1886); and *Volkswirtschaftliche Abhandlungen* (1886; 4th ed., 1898). He was one of the editors of a *Handbuch der politischen Oekonomie* (4th ed., 1896-98).

SCHÖNBRUNN, shôn'brunn. A famous palace in the outskirts of Vienna, the summer residence of the Imperial family (Map: Austria, B 5). Here the Treaty of Schönbrunn between Austria and France, following the victory of Napoleon at Wagram, was signed on October 14, 1809. Austria surrendered Salzburg, part of Upper Austria, and Carinthia, Carniola, most of Croatia, the Adriatic coast-land, and the territory which she had taken in the third partition of Poland (1795).

SCHÖNEBECK, shê'ne-bëk. A town in the Province of Saxony, Prussia, on the Elbe, 8 miles south-southeast of Magdeburg (Map: Prussia, D 2). It has important chemical works and salt refineries. It also manufactures matches, colors, buttons, machinery, artificial guano, etc. There is a trade in grain, timber, and coal. Population, in 1900, 16,257.

SCHÖNEBERG, shê'ne-bërk. A residential suburb of Berlin (q.v.). It is the seat of an aerial navigation bureau of the German army, and has an observatory and a large private insane asylum. The manufactures include sulphite-cellulose, photographic apparatus, paper, lightning-rods, and military supplies. There is also a large railway repair and construction shop. Population, in 1900, 96,059.

SCHÖNEFELD, shê'ne-fëlt, HENRY (1856—). An American composer and pianist, born in Milwaukee, Wis. In 1874 he went to Leipzig for study. He returned to America in 1879, and settled in Chicago, where he conducted several musical societies, and was on the faculty of the Hershey School of Music. He was one of the first American-born composers to use negro folk-songs. He became a member of both the Chicago and the New York Manuscript Society. His compositions include *Gypsy Melodies*, *Liberty*, *In the Sunny South*, *Rural Symphony*, *Reverie*, *Serenade*, *Valse Brillante*, and *Kleine Tanz Suite*.

SCHÖNEMANN, shê'ne-mán, ANNA ELISABETH (1758-1817). A friend of Goethe, born in Frankfort-on-the-Main. She was the daughter of a wealthy merchant, was betrothed to Goethe in the spring of 1775 and inspired his poems to "Lili." The engagement was soon broken, and in August she married Baron von Türekheim, who

later became Mayor of Strassburg. Consult Von Dürckheim, *Littis Bild* (2d ed., Munich, 1894).

SCHONGAUER, shon'gou'ér, MARTIN (c.1440-91). A painter and engraver of the early Sualian school, the greatest German artist of the fifteenth century. He was commonly called Martin Schön or Hübsch Martin, by reason of his beautiful art. He was born at Kolmar, Alsace, the son of Kaspar Schongauer, a goldsmith of Angsburg, who had settled at Kolmar before 1440. Martin probably practiced at first his father's craft, and, turning to painting at an early period, was presumably instructed by Kaspar Isenmann, then the most prominent painter of Kolmar, whose influence is traceable in Schongauer's work. Whether he afterwards studied under Rogier van der Weyden is open to doubt, but he surely passed an apprenticeship in the Netherlands and was deeply impressed by the works of Rogier, emancipating himself only gradually from their influence. After his return he established at Kolmar a studio for painting and engraving, frequented by numerous disciples and assistants. While engaged upon a commission at Breisach, he died on February 2, 1491.

The number of Schongauer's authenticated paintings is very limited, and his artistic development can therefore be more easily estimated from his engravings. His early period is best represented by the "Madonna in an Arbor of Roses" (1473), now in the Schongauer Museum at Kolmar, a highly finished work, in which the Flemish type is unmistakable. Of later date is, in the same museum, the series of sixteen panels, depicting the "Passion of Christ," in which native German influences preponderate. A similar progress may be observed in the two altar wings with the "Annunciation" and the "Child Adored by the Virgin and Saint Anthony." His latest stage is well exemplified by two exquisite small pictures of the "Holy Family," in the Pinakothek at Munich and the Vienna Museum.

As an engraver, Schongauer ranks as the foremost artist of his day. His modeling and shading are firm and delicate, the compositions highly picturesque, and the landscape backgrounds exceed anything previously achieved in German art. Among his 117 plates some of the most remarkable are the "Bearing of the Cross," "The Annunciation," "Christ on the Cross," "The Wise and Foolish Virgins," "The Temptation of Saint Anthony," "Christ Enthroned," and the ideal figure of "Saint Agnes." The most comprehensive reproduction of his engravings is Amand-Durand, *Œuvre de Martin Schongauer*, with text by Duplessis (Paris, 1881). Consult: Schmidt, in Dohme, *Kunst und Künstler* (Leipzig, 1877); Bach, "Neues über Martin Schongauer," in *Reportorium für Kunstwissenschaft*, xvii. (Berlin, 1899); Goutzwiller, *Le musée de Colmar* (Paris, 1875); Burekhardt, *Die Schule Martin Schongauers am Oberrhein* (Basel, 1888); and Janitschek, *Geschichte der deutschen Malerei* (Berlin, 1890).

SCHÖNLEBER, shên'lä-bër, GUSTAV (1851—). A German landscape painter, born in Bietigheim, Württemberg. He studied in Stuttgart and Munich. In 1880 he was called to the Academy of Karlsruhe, of which institution he afterwards became director. Among his principal paintings may be mentioned: "Port of Rotter-

dam" (1879); "Quinto al mare" (1888); "Castello di Paraggi" (1893); "Summer Storm at Rapallo" (1898); and numerous other coast scenes in Italy, Holland, and England, besides village views in Germany. As a colorist Schönleber is subdued, preferring the lights of storm and mist. In drawing he has the precision of the Renaissance allied to the most modern composition. He is known also as an etcher and illustrator.

SCHÖNLEIN, shên'lin, JOHANN LUKAS (1793-1864). A German professor of medicine, born in Bamberg. He studied medicine at Landshut, Jena, Göttingen, and Würzburg. After teaching at Würzburg and Zurich he was called to Berlin in 1839. There he taught therapeutics and pathology and directed the clinical department in the university. He was also appointed physician to Frederick William IV. He wrote *Allgemeine und specielle Pathologie und Therapie* (1832) and *Klinische Vorträge im Charité Krankenhaus zu Berlin* (1842). Consult: Virechow, *Gedächtnissrede auf Schöndlein* (Berlin, 1865).

SCHÖNN, shên, ALOIS (1826-97). An Austrian genre painter, born in Vienna and educated in the academy of that city. In 1848 he enlisted as a sharpshooter in a Tyrolean regiment and saw service in Italy. There and afterwards in Hungary he gained material for his first pictures. In 1850-51 Schönn studied under Horace Vernet in Paris. He then traveled in the southern regions of Austria and the East, which gave him subjects for many of his best known canvases, such as "On the Coast of Genoa" (1872, Vienna Museum), Arab Story Tellers, Turkish Vintage Festival, etc. Gypsy life in Hungary was also one of his favorite subjects, as shown by "Village Gypsies in Upper Hungary" (Gotha Museum).

SCHÖNTHAN, shên'tán, FRANZ VON (1849—). An Austrian dramatist, born in Vienna. After serving four years in the navy he went on the stage and also began to write for periodicals. His first successful dramatic effort was *Das Mädchen aus der Fremde* (1879), upon which followed the farce *Sadom and Gomorrah* (1880), and, in collaboration with Moser, *Der Zuzwagel* and *Krieg und Frieden*, played on all the stages of Germany. In 1883-84 stage manager of the Stadttheater in Vienna, he lived afterwards alternately in Berlin and on his estate at Brunn, near Vienna, and finally settled at Dresden. Of his numerous comedies, often partaking of a farcical character, may be mentioned: *Insre Frauen* (with Moser, 1881); *Der Schachbrettsreich* (1882); with his brother Paul, *Der Raub der Sabirinanna*, *Frau Direktor Striese* (1885), and *Das gelobte Land* (1892); with Kadelburg: *Goldfische* (1886), *Die verahute Frau* (1887), *Der Herr Senator* (1894); and with Kopell, Ellfeld: *Komtesse Guckerl* (1895), *Renaissance*, *Die goldene Era* (1896), and *Floria und Thario* (1901). Several of his plays are well known on the American stage.

His brother PAUL (1853—), after serving in the army, became a journalist in Vienna, and published numerous tales and novels, notably: *Welt und Kleinstadtgeschichte* (1889); *Ring Strassenzauber* (1894); *Schlecht Russen* (1894); *Geboren der Eiche* (1895); *Wiener Luft* (1897); *Eufaut terrible* (1897); *Bravo und schlimme Frauen* (1901); and *Pariser Modell* (1902), a

W. W. H. W. *Handbuch der Ethnologie*, 1895).

SCHOODIC, *shook*. A river of Maine. See *CRUISE*.

SCHOOL CRAFT, HENRY ROWE (1793-1861). An American ethnologist. He was born in Warren, New York (now Guilderland), New York. He studied mineralogy and chemistry for a year in Brown College, and in 1817 began the publication of a *Journal on Ethnology*. In 1817-18 he made a tour of the West, especially through southern Missouri and Arkansas, to study mineralogy and geology. The result was a volume entitled *A Tour of the Lead Mines of Missouri*. In the following year he received an appointment from the Government to explore the Upper Mississippi and the copper regions of Lake Superior. In 1822 he was made agent for the tribes about Lake Superior, and thenceforth turned his attention to history and ethnology. In 1831 he was one of the principal founders of the Algic Society, in Detroit, devoted to the antiquities and ethnology of the American aborigines. In 1826 he was instrumental in settling land disputes with the Chippewas, and by the treaties then effected the United States became possessed of vast territory, worth many millions of dollars. It was while he was engaged as Superintendent of Indian Affairs in this Northern Department that he published his *Algic Researches* (1839). From this period Schoolcraft gave his attention to literary pursuits. His chief contribution to the history of Indian affairs was his six quarto volumes entitled *Historical and Statistical Information Respecting the History, Condition, and Prospects of the Indian Tribes of the United States* (1851-57). The work is partly from his pen and partly a collection of essays of greater or less value by others. Among his other publications the most important are: *Oncota; or the Red Race of America* (1844); *Notes on the Iroquois* (1846); *Personal Memoirs of a Residence of Thirty Years with the Indian Tribes on the American Frontiers* (1863).

SCHOOL DISEASES. See *HYGIENE*.

SCHOOL FOR SCANDAL, THE. A very popular comedy by Richard Brinsley Sheridan, produced in 1777. Much of the action centres in the devotees of scandal who meet at Lady Smeerwell's house to destroy reputations. Sir Peter and Lady Teazle, Maria, the ward, and the Surfees, Charles, Joseph, and Sir Oliver, supply the comic situations, notably the auction scene, in which Charles sells the family portraits, and the screen scene, when Lady Teazle is surprised in Joseph's apartments by Sir Peter and Charles.

SCHOOLMASTER. A term sometimes applied in the United States and England to persons engaged in carrying on elementary and secondary instruction. In the great public schools of England from the beginning schoolmasters have been chosen usually with considerable care. Most of the charters of the great public schools provided for the election of headmasters from among the Masters of Art of either Oxford or Cambridge University. In the private and charitable schools, before the passage of the Educational Act of 1868, positions of schoolmasters were not infrequently filled by disappointed soldiers of fortune, who were mostly ignorant of even the elementary subjects which they were intended to teach. With the establishment of training col-

leges for teachers, and the assumption of the responsibility of supervision of education in the latter half of the nineteenth century by the English Government, educational matters took a turn for the better, and the condition of the schoolmaster has since been gradually improving.

In the United States the same marked development in the status of the schoolmaster may be noticed as in England. In colonial times there were no trained teachers. Whoever chose to set himself up as schoolmaster was allowed to do so without regard to his previous training or attainments. There was no inducement for able young men to enter the teaching profession. Salaries were low, and the status of a schoolmaster was correspondingly insignificant, and only with the educational awakening of the Horace Mann period begins the rise of teaching as a profession. At common law the authority of the schoolmaster over his pupils was that of one *in loco parentis*, and where unmodified by statute this rule still persists.

SCHOOLMASTER, THE. A work on education by Roger Ascham (1570), which gives his methods of learning Latin and of training children.

SCHOOLMEN. See *SCHOLASTICISM*.

SCHOOL OF ATHENS. See *RAPHAEL*.

SCHOOLS (*AS.* *scōla*, from Lat. *scōla*, *schola*, learned discussion, lecture, school, from Gk. *σχολή*, *scholē*, learning, leisure, school). Places where instruction is given.

The elementary instruction of the Hindu Brahman is given either out of doors or in some rude building. Instruction is to a large extent oral. The Brahman repeats certain passages which the pupils are expected to learn to recite verbatim. Writing is first practiced in sand. The more advanced grades of Hindu instruction involve extensive reading. In China each pupil provides his writing table and chair, his books and writing materials. The school hours are from sunrise till 5 p.m., with an intermission of an hour from 10 a.m. to 11 a.m. The children learn to pronounce the characters in their books by imitating their teacher. Reading matter is committed to memory by repeating it aloud. As the written language differs from the spoken one, these exercises are like learning to pronounce and read the characters of a foreign tongue without understanding their significance. Later on exercises in translation and composition appear. Among the Hebrews the Law was expounded by teachers in the porches of the Temple. The synagogues were used for a similar purpose, and in them children were instructed during the week. The amount of instruction grew until, from being merely an oral teaching of the law, it involved letters and arithmetic. Elementary schools became common after the Christian Era, and in A.D. 64 they were made obligatory by the High Priest Joshua ben Gamala. The Spartan education was chiefly physical, consisting of athletic exercises and dancing, frequently accompanied by chanting. It was conducted in the open air under the guidance of officers called *παιδοβοῦοι*. Each youth was also under the special charge of an adult, whose office was to inspire him to exert his best powers. At Athens the schools were probably all conducted as private ventures. Some were situated in the open air or in the porticoes of temples. There were two classes of schools for

boys. One, the musical or literary school, was taught by a grammarian. Instruction in the non-literary phases of music was often given by a citharist. The other school, the palaestra or gymnastic school for boys, was under the *paidotribē*. In the literary school the curriculum included reading, writing, arithmetic, and in some cases drawing and geography. The poets, especially Homer, were for the most part the authors read. Arithmetic was very simple, being that necessary for ordinary business. The abacus was used. In writing, younger pupils employed the wax tablet and the stylus, older ones, pen and ink, with papyrus. Maps are known to have been in use. Older students attended a gymnasium, where the instruction was more of a professional character. Younger boys were accompanied to school by a pedagogue (*παῖδαγωγός*), to whom was intrusted the general oversight of the conduct and welfare of his charge. The pedagogue was usually a slave. The hours of daylight were all consumed at school.

At Rome primary instruction was given in the *ludus*. Reading and writing were here taught, and sometimes arithmetic. Frequently, however, a special teacher of arithmetic was employed. Pebbles (*calculi*) were used in figuring, and the stylus and wax tablet in writing. The books were rolls of manuscript carried in wooden boxes. The schools were conducted as private ventures and were sometimes held in the open air. Usually, however, they were in mean and sparsely furnished apartments. The children sat on the floor. The work was largely that of committing to memory, and discipline was severe, flogging being a common resort. The pedagogue existed as in Greece. At about 12 years of age the boy passed into a secondary school, that of the *grammaticus*. Here he was taught grammar, Greek, and a little geography and geometry. The quarters were usually somewhat better than those of the *ludus*. Children sat on benches, while the master occupied a raised seat or cathedra. In later times some of these schoolrooms were adorned with works of art. The elementary teacher among both Romans and Greeks was held in low esteem, if not in positive contempt.

During the Middle Ages elementary schools existed in connection with the monasteries, the cathedrals or collegiate churches, the hospitals, and the guilds. As the Church conceived education to be its function, wherever an association of the clergy existed some instruction was commonly carried on. Each monastery usually provided quarters and a schoolroom for its novices or *oblats*. In 817 the Council of Aix-la-Chapelle decreed that the *externi*, or pupils not preparing for holy orders, should be separated from the others. The instruction in the different monasteries was of widely varying merit. It began with exercises in reading the Latin psalter, little if any attention being paid to its meaning. At the same time there was practice in copying on wax tablets. The pupils were trained to sing the church services, and a little instruction in arithmetic and Latin was given. Secondary instruction comprised the *trivium* (q.v.) and the *quadrivium* (q.v.) constituted the higher education. The schoolrooms, methods, and discipline were in harmony with the ascetic spirit of the time. Shortly after the beginning of the 'trivial' studies, boys not destined for the Church were usually withdrawn from the school. More advanced novices

were set to teach lower classes. A considerable number of the pupils in the monastic and hospital schools were charitably cared for, and in many institutions no great pains were taken with their instruction, except to render them effective in performing the church services. In general, however, instruction was free, those having means providing for their own maintenance. The guild schools, taught ordinarily by the chaplain of the guild, gave a little instruction in Latin, such as would be required in business, where accounts and correspondence were to a considerable extent in that language. More stress was laid in these schools on arithmetic, and in Germany one guild, the *Rechenmeister*, developed this subject extensively.

The appearance of printed books gave a powerful impetus to learning, and the Renaissance introduced new motives into elementary and especially secondary education. Power to appreciate the beauty of literature and skill in literary composition, such as poetry and letter writing, became objects of desire on the part of the aristocratic classes in society. A class of lay teachers sprang into existence to satisfy the demand. Private schools became a source of considerable income and social prestige to their masters, and tutorial education assumed unprecedented importance. A variety of methods and subjects were introduced or proposed for enlivening the school atmosphere. In the secondary schools the Jesuits developed to a marked extent schemes by which the interest of emulation might be invoked. History became a prominent subject, and great stress was laid on the classics as literature. Declamation, the acting of plays, poetic composition, etc., appear everywhere as school exercises. Study of the vernacular is gradually introduced, and later a mastery of French becomes indispensable in the diplomat and practically so in the cultivated man. The educational critics and reformers of the period and the sixteenth and seventeenth centuries urge the need of making the school more interesting by mitigating the severity of the discipline, especially as regarded corporal punishment, by increasing the attractiveness of the schoolrooms, by introducing gymnastic exercises, study of the world of nature at first hand, and illustrated textbooks. Rabelais, Montaigne, Comenius (q.v.), and Locke represent the advanced thought of the time. A prevalent custom was to send youths traveling accompanied by a tutor. Even before the Renaissance the custom of wandering from monastery to monastery existed. The development of universities increased the practice of traveling. Frequently students without means begged their way.

In the seventeenth and eighteenth centuries there flourished in Germany the *Ritteracademien*, or academies for nobles. They were usually situated in the capital city of a principality, and the students participated in the social life of the Court. Stress was laid on the study of French, and drawing and fencing masters were employed. In the English public school life of the period athletic exercises came to take the prominent part they have since maintained.

The Renaissance, by expanding enormously the trivium or secondary school curriculum, led to elaborate systems of grading of students. The Brethren of the Christian Schools, an Order founded by La Salle in 1683, employed for the first time in elementary instruction the system of

ing, and instruction was given to classes instead of individuals. Before the eighteenth century manual training had appeared in the schools. The institutions founded by Francke at Halle included Rarher schools and a *Pedagogium*, in both of which students were trained in the manual arts. These schools also offer examples of the study of natural science by laboratory methods.

The complex and rapid development of modern schools is best studied under the titles given at the end of this article.

RELIGIOUS EDUCATION IN SCHOOLS. The history of religious education has been bound up with that of the control of education by priesthoods or churches. Inasmuch as the civic virtues of the people are cultivated and sanctioned by religious observances and beliefs, religious education has been of the greatest importance in developing cohesive and powerful nationalities. This is especially true while the religion remains a purely national one. With the appearance of cosmopolitan religions like Christianity and Mohammedanism, the value of religious education for the cultivation of a specifically national spirit became less. In Europe Church and State drifted apart, and the former, as dealing with man's spiritual interests, assumed control of education. The Reformation, by introducing nationalism again into matters of religion, led to the active assumption by Protestant rulers of authority over education, as one of the phases of religious responsibility. In the struggles that followed, religious education was felt to be a means, not merely of furthering man's eternal and spiritual welfare, but also of strengthening the State. The multiplication of sects, however, leading in many communities to a separation of Church from State, has tended to drive out from the State schools such religious instruction as is peculiar to any specific Church, and to exclude or minimize the amount of ecclesiastical control or inspection. The Catholics maintain schools of all grades in the United States, England, and the Catholic nations of Europe. In France up to the time of the enforcement of the Associations Law a considerable fraction of both elementary and secondary education was carried on by different Catholic Orders. In these schools religious instruction constitutes an important part of the curricula. See FRANCE, section on *Education*.

In respect to religious instruction and the supervision thereof, the following classes of schools exist:

(1) Schools conducted under denominational auspices and subsidized by the State. England, Holland, and Russia furnish examples of this type. In Russia the schools of the Holy Synod carry on nearly half of the elementary instruction given. Their principal aim is religious education, and their maintenance is entirely from public funds. In England the schools of the Church societies have been for many years in receipt of Government grants. In return, however, they have submitted to Government inspection and are not allowed to require any specific faith of their pupils. Moreover, the 'conscience clause' allows parents, if they see fit, to withdraw children from school during the time devoted to religious exercises. The law of 1902 places the programme of secular studies in such schools in the hands of the Government, which in return provides almost entirely for their main-

tenance. In Holland denominational schools are subsidized, provided they maintain the official standard.

(2) Schools under State control, but offering religious instruction that is supervised by religious authorities. In Spain religious instruction is given regularly in the State schools, and the clergy are represented on the governing boards and inspect the schools. In Austria religious instruction is given in the schools. The beliefs of the religion dominant in the locality are taught. The instruction is usually carried on by clergymen. In Prussia religious instruction is compulsory and supervised by the clergy. The tenets of the majority are taught by regular teachers. The State also provides partially for the religious instruction of the minority. In Sweden the clergy inspect the schools and are prominent in their control. In Norway religious instruction is supervised by the clergy. The same is true of Denmark.

(3) In several countries, while the school does not undertake religious instruction, the State permits the use of the schoolhouse for this purpose, and sometimes sets aside a period during which such instruction may be given by the clergy of different denominations. Such a plan exists in Holland and in some of the cantons of Switzerland. In France place is made on the school programme for the attendance of children on religious instruction, but it is given outside the school building. In Italy religious instruction may be given outside the schoolhouse if there is a local demand therefor.

(4) Many countries exclude denominational religious instruction entirely from the curriculum. France has taken this stand, but the French school programme contains a great deal of instruction of an ethical and religious but non-denominational character. The Swiss Constitution forbids compulsory religious instruction and some cantons give none whatever. The religious instruction of the English non-denominational public schools is of a very general character, and the conscience clause permits the withdrawal of pupils from it. In the United States no denominational instruction is given in the schools of any State. In New England Bible reading and prayer are a common part of the programme of school work. Massachusetts requires them, but children may be withdrawn while religious exercises are being conducted, if the parents so desire. In many of the States the constitutions forbid the use of public funds for the aid of sectarian schools. Many also forbid sectarian instruction in the schools. This, however, is not taken to mean that the Bible should not be read or prayer offered, for in 1895 the Bureau of Education found that out of 808 cities of 4000 population or over, which were scattered over the Union, 651 had religious exercises in their schools, and these were prohibited in only 77 cities. In Wisconsin the prohibition of religious exercises is general.

The earlier colonial schools of the United States were usually under sectarian control and gave much attention to religious instruction. After the Revolution the spirit of freedom in religious matters became dominant. The First Amendment to the Constitution declares that "Congress shall make no law respecting an establishment of religion or prohibiting the free exercise thereof." The States also have followed the

spirit of this provision. The lack of specific religious instruction in the public schools has, however, been felt by many to be a serious defect. The Catholics, while agreeing and even insisting that the public school should be non-sectarian, have urged that their own parochial schools should be subsidized out of the public funds to which they have contributed. In New Mexico and Georgia they have succeeded in getting such appropriations. There has also been a general feeling that the knowledge of the Bible even as a work of literature was fast disappearing. The Sunday school, to which the churches have resorted for the religious instruction of the young, is felt to be inadequate and to fail in reaching a large portion of the population.

The relation between the schools and the State is discussed under the headings EDUCATION and NATIONAL EDUCATION, SYSTEMS OF. The development of the school system in the United States is also treated under PUBLIC SCHOOLS. The local and general administration of schools and their relation to the Government in respect to State support and State control is taken up in still greater detail in the articles on the various countries of the world, under the heading EDUCATION. See also the articles: COMMON SCHOOLS; EVENING SCHOOLS; GRAMMAR SCHOOLS; HIGH SCHOOLS; PUBLIC SCHOOLS; SECONDARY SCHOOLS; SUMMER SCHOOLS; with bibliography under these headings.

SCHOOLS, BROTHERS OF THE CHRISTIAN. A religious congregation in the Roman Catholic Church, established for the education of the poor by Jean Baptiste de la Salle (q.v.) in 1684, and confirmed by the Pope in 1724. Their system of education has received the highest testimonies, and they still form one of the most flourishing of the lay Orders in the Roman Catholic Church. Besides this Order, several other institutes have been formed for the same purpose under similar names. An Irish institute of Christian Brothers was formed at Waterford in 1802, by a layman, Edmund Ignatius Rice (1762-1844), and confirmed by Pius VII. in 1820. In 1896 they reported 97 houses in Ireland, with 309 schools, and 30,000 pupils, as well as branches in Newfoundland, Gibraltar, Calcutta, and Allahabad.

SCHOOL SAVINGS BANKS. A system of banks by which school children may be encouraged in habits of thrift. In nearly all European countries school children are encouraged to acquire the habit of saving through the device of savings banks maintained in connection with the schools. Commonly these institutions are associated in management and in the official reports with the postal savings banks. They have not been extensively introduced into the United States, partly, no doubt, because of the willingness of the ordinary savings banks (q.v.) to receive small deposits, and partly because in recent years the penny provident banks have fully met the demand for such a means of encouraging saving by children.

SCHOOL-SHIP, NAUTICAL. See NAVAL SCHOOLS OF INSTRUCTION.

SCHOOLS OF LIBRARY ECONOMY. A term applied to institutions for the study of library administration. The movement to establish schools for the professional training of librarians began at Columbia University in 1883. In 1887 a three months' course was organized, and in 1889

the school was transferred to the New York State Library at Albany. The remarkable success of this school encouraged the establishment of similar institutions elsewhere, and in 1890 the Pratt Institute in Brooklyn, the Drexel Institute in Philadelphia, and the Armour, in Chicago, organized regular schools for this branch of study. In many universities courses in library economies are offered under the direction of their librarians. See LIBRARIAN, section on *Library Schools and Training*; also PROFESSIONAL EDUCATION.

SCHOONER (from *seaman, seato*, to skim, skip, from Norweg. *skunnar*, Icel. *skunda, skunda*, AS. *scynðan*, to hasten, OIG. *scuntan*, to urge on). A sailing vessel having two or more masts and wholly or chiefly fore-and-aft rigged. It is said to have been first designed by Captain Andrew Robinson, of Gloucester, Mass., in 1713. A few schooners have a topsail and a topgallantsail on the foremast, and are called 'topsail schooners.' Some schooners carry a single yard on the foremast on which to set a square sail when desirable. But by far the greater number are wholly fore-and-aft rigged. The lower sails are bent to gaffs, booms, and hoops on the mast. There are usually two masts, but sometimes as many as seven. The schooner rig is distinctively American; its use abroad, until recently, was confined to quite small craft. See SAIL; YACHT, and accompanying Plate.

SCHOPENHAUER, shô'pən-hou'ər, ARTHUR (1788-1860). A German philosopher, born at Danzig, February 22, 1788. He was the son of a rich banker and merchant, who determined to educate him to be a man of affairs, and put him to school in France, and afterwards took him on travels through Belgium, England, France, and Switzerland. In 1805 he was placed in a business house in Hamburg, but soon afterwards, on his father's sudden death, he was taken by his mother to Weimar, where he entered upon the study of classics, natural science, and philosophy. In 1809 he entered the University of Göttingen, and devoted himself at first to medicine, but was soon attracted to philosophy, and in 1811 he went to Berlin to hear Fichte. In 1813 he took his degree at Jena on the since celebrated thesis: *Ueber die vierfache Wurzel des Satzes vom zureichenden Grunde*. In this treatise he distinguished between the principles of being, of becoming, of knowing, and of acting. These are respectively space and time, causality, logical ground, and motive. Schopenhauer spent the winter of 1813 at Weimar, where he enjoyed the society of Goethe, and devoted himself to studies in Oriental philosophy and in the theory of color. From 1814 to 1818 he lived at Dresden, occupied in writing a treatise on optics: *Ueber das Schön und die Farben* (1816), and his magnum opus *Die Welt als Wille und Vorstellung* (1819). He then traveled in Italy, and returned to lecture in Berlin as privat-docent in 1820. Hegel was at that time the rage, and Schopenhauer found no success in lecturing against such a popular rival. After two years he returned to Italy, to stay three years more. But a renewal of philosophic interest recalled him in the south and he again attempted to establish himself as a lecturer in Berlin. In a spirit of bravado he chose for his own lectures the hours when Hegel was drawing his crowds, but failed to furnish a sufficient counter-attraction. In 1831 he left Berlin for

in Frankfurt on the Main, where he spent his early years in morose seclusion. He published his elaboration of his system, and his *Wissenschaft der Natur* (1836), and *Wissenschaft der Ethik* (1841), and his *Paralipomena* (1851).

The last years of his life were made happy to him by the homage of his admirers, and the calm which had come to his passionate nature with advancing years. He died in 1859, and the fame he had vainly longed for in life soon gathered around his memory. By temperament moody and despondent, irritable in temper, and violent in passions, he was well endowed to seize just those aspects of life which are the elements of a pessimistic philosophy. But the value of Schopenhauer's philosophy cannot be measured by any such method of personal criticism. His system, set forth in a literary form that, in the field of philosophy, has never been surpassed unless by Plato at his best, and based on marvellous insight into the realities of life, falling in also with the disappointed mood of the age, has gained an acceptance that is, perhaps, greater than its real value warrants. Yet it has an abiding worth as emphasizing elements which a too optimistic philosophy did not sufficiently consider. The profound tragedy of life, the very real evil of the world, which is so fundamental a part of all great philosophies and religions, is ever present in his thought, though without sufficient balance. In this his thought is akin to that of the ancient Hindu philosophies, with which he felt himself in close harmony, believing that he had accomplished a synthesis of their insight with Kantian thought. With him the tragedy of life arises from the very nature of the underlying source of all existence, which is will, not intelligence—will, not in the ordinary sense of choice, but in the sense of activity, energy, impulse. This is not rational, since impulse is prior to reason. In its caprice (essentially incapable of reasoned action), it makes reason to be. Thus it is not reason that goes out into realization of itself in the world of persons and things, but impulse, which happens to realize itself in intelligence. Reason, thus, can never understand its own profounder source, since it is more and other than reason—is essentially irrational. It may modify impulse, may by resignation deny the will-to-live. The supreme wisdom of life is, therefore, what it has been (with differences) to such mystics as Thomas a Kempis and Gautama—resignation. This conception of the source of all life in will came to Schopenhauer through clear insight into the very nature of consciousness as essentially impulsive. His metaphysics is thus empirical, based on experience, arrived at by induction. As such, it furnishes a ground of reconciliation for elements realistic and idealistic which were before separated, even for science and metaphysics. A clearer and still deeper insight into consciousness, based on a healthier temperament, a less violent nature, a more regular life, using Schopenhauer's method, may (as it has never been done before) comprehend reason and impulse as equally fundamental elements in consciousness, or as equal aspects of the one underlying source of all things. Only a brief word can be given to Schopenhauer's great influence on art. The restlessness of desire—longing, hoping, failing—comes upon peace of a certain sort in artistic contemplation. This is

the controlling thought in Wagner's music; and music more than aught else reveals will to us, man's inmost nature. Restless movement, flow of changing passions, and unaccountable yearnings can be uttered adequately by music alone of the arts; and it is for this reason that music has been called the supreme art.

His complete works were edited by Frauenstädt (Leipzig, 1873-74; 3d ed. 1891); by Grisebach (ib., 1891), and also by Warschauer (Berlin, 1891). Grisebach also published Schopenhauer's *Handschriftlicher Nachlass* (Leipzig, 1891-93). Many of his works have been translated into English. Of these may be mentioned *The Art of Literature* (New York, 1891); *Religion, a Dialogue, and Other Essays* (London, 1889); *Selected Essays* (ib., 1891); *Studies in Pessimism* (ib., 1891); *Two Essays: On the Fourfold Root of the Principle of Sufficient Reason; On the Will in Nature* (ib., 1889); *The Wisdom of Life* (New York, 1891); *Counsels and Maxims*, trans. by Saunders (ib., 1891); *The World as Will and Idea* (London, 1883). For his life, consult Wallace (London, 1890), Zimmern (ib., 1876), Gwynne (Leipzig, 1878), Kuno Fischer (Heidelberg, 1897), Grisebach (Berlin, 1897), and Volkeir (Stuttgart, 1900). For exposition and criticism of the various aspects of his philosophy, Caldwell, *Schopenhauer's System in Its Philosophical Significance* (New York, 1896); Colvin, *Schopenhauer's Doctrine of the Thing-in-itself* (Providence, 1897); Damm, *Schopenhauer's Ethik* (Annaberg, 1898); Lehmann, *Schopenhauer* (Berlin, 1894); Lorenz, *Zur Entwicklungsgeschichte der Metaphysik Schopenhauers* (Leipzig, 1897); Mayer, *Schopenhauers Aesthetik* (Halle, 1897). See PESSIMISM; PHILOSOPHY.

SCHOPENHAUER, JOHANNA (1766-1838). A German author and mother of the philosopher Arthur Schopenhauer. She was born at Danzig. At the age of twenty-seven she married the banker Heinrich Schopenhauer, and during the lifetime of her husband she spent much time in travel. After his death she lived for a time in Weimar, where she gathered about her a brilliant circle of remarkable persons, among whom were Wieland and Goethe. Afterwards she lived in Bonn and then in Jena. She wrote novels and descriptions of travel. *Gabrielle* (1819) is considered her best book. Her complete works were published at Leipzig in 1830-31 in twenty-four volumes.

SCHORLEMMER, shōr'lem-mēr, CARL (1834-92). A German-English chemist, born at Darmstadt. He was educated at Darmstadt and at the University of Giessen. In 1859 he went to Owens College, Manchester, and there he was made assistant in chemistry in 1861, and professor of organic chemistry in 1874. His chief contribution to chemistry is in connection with the simplest compounds of organic chemistry, viz. the compounds containing only carbon and hydrogen. Schorlemmer was the first to demonstrate by experiment that no compounds which would have contradicted the structural theory are really capable of existence; and thus he cleared the way for the introduction of one of the most useful theories of modern science. His publications include: 1 *Manual of the Chemistry of Carbon Compounds, or Organic Chemistry* (German and English, 1874); a voluminous *Systematic Treatise on Chemistry* (written jointly with

Sir Henry Roscoe; the first part of this work was published in 1877, but the work is still incomplete): *The Rise and Development of Organic Chemistry* (1879), an historical work of considerable value. Consult Roscoe's sketch of Schorlemmer in the *Proceedings of the Royal Society* (1829-93, 52 vii).

SCHORN, shörn, KARL (1803-50). A German historical painter, born at Düsseldorf. He studied under Wach of Berlin and Cornelius of Munich, and first came into notice through the firm and brilliant color of his pictures "Mary Stuart and Rizzio," "Charles V. at San Yuste," and "Cromwell Before the Battle of Dunbar" (Königsberg Museum). He took part in frescoing the arcades of the Hofgarten in Munich, and designed cartoons for the side windows of the Regensburg Cathedral. His chief work was ordered by Frederick William IV. of Prussia, "The Anabaptist Prisoners Before Bishop Franz of Münster in 1536." In the National Gallery at Berlin are "Capuchin Friars and Wallenstein Soldiers at Cards" (1837), and "Pope Paul III. Before the Portrait of Luther" (1839); in the New Pinakothek, at Munich, "Knox Disputing with Soldiers," and the colossal "Deluge" (1845-60, finished by Piloty). Schorn was a professor in the Munich Academy after 1847.

SCHOTT, CHARLES ANTHONY (1826-1901). An American civil engineer, born in Mannheim, Baden. He was educated at the Polytechnic School at Karlsruhe, came to the United States in 1848, and became permanently attached to the computing division of the United States Coast and Geodetic Survey. In 1855 he was appointed to supervise the magnetic work of the survey, and became at the same time chief of the computing division, an office which he held until 1899. In 1899 he received the Wilde Prize and 4,000 francs from the Academy of France in recognition of his scientific writings, published in the documents of the Smithsonian Institution and the reports of the Coast and Geodetic Survey, which were considered the most important in the history of terrestrial magnetism. He was a member of the National Academy of Sciences and a founder of the Washington Academy of Sciences.

SCHOTT, shöt, WALTER (1861-). A German sculptor, born at Ilsenburg, in the Harz Mountains. First instructed by Dopmeyer at Hanover, he frequented the Berlin Academy in 1880-83 and developed especially under the influence of Reinhold Begas. Of several graceful mythological and genre figures, a group of "Charity" and a "Girl Bowling" are especially noteworthy. His statues include those of "Frederick William I." in the White Room of the Royal Palace, Berlin, of "Albert the Bear," in the Sieges-Allee, Berlin, and the equestrian statue of "Emperor William I." at the Kaiserhaus in Golsar. A series of candelabra with groups of animated figures, in the garden of the New Palace at Potsdam, well exemplify his sterling decorative work. His numerous busts are of singularly spirited conception. He was awarded gold medals in Berlin, Dresden, Munich, Antwerp, Chicago, and Vienna.

SCHOTT, WILHELM (1807-89). A German Orientalist. He was born in Mainz, studied at Giessen, Halle, and Berlin, and in 1838 became instructor of Eastern Asiatic languages in

the University of Berlin. He wrote many valuable works on the languages and literature of Asia and Finland; chief among them are *Vocabularium Siniticum* (1844), *Buddhismus in Hochasien und in China* (1844), *Indisch-chinesische Sprache* (1856), *Chinesische Verknüpfung* (1857), *Finnische und esthnische Heldensagen* (1866), and *Zur Uigurfrage* (1874-75).

SCHOTTISCHE (Ger. Scottish). A slow modern dance in $\frac{3}{4}$ time. Probably it was invented by Markowski, a well-known London teacher of dancing, and first danced in 1848. It is a round dance somewhat resembling the polka (q.v.).

SCHOULER, skō'ŭlēr, JAMES (1839-). An American historian, born at Arlington, Mass. He was graduated at Harvard in 1859, practiced law in Boston, joined the Union Army (1862-63), and resumed the practice of law, on which he lectured in Boston University (1884), and at the National Law School, Washington. He lectured also on American history in Johns Hopkins University after 1889. He wrote legal treatises on *The Law of Domestic Relations* (1879), *The Law of Bailments* (1880), *The Law of Personal Property* (1873-76), *The Law of Husband and Wife* (1882), *The Law of Executors and Administrators* (1883), and *The Law of Wills* (1887). To history he contributed a *Life of Thomas Jefferson* (1893), *Historical Briefs* (1896), *Constitutional Studies* (1896), and a *History of the United States Under the Constitution* (1880-98). The last is his most important work, and is in many respects the best history of the United States as a nation—that is, not including the colonial period. It is the fullest narrative stretching from 1783 to 1865, and, while emphasizing politics, does not neglect social matters. It is pro-Northern in tone, but thorough and judicious, its chief defects being those of manner rather than matter.

SCHOUTEN, skou'ten, WILLEM CORNELIS (c.1567-1625). A Dutch navigator, born at Hoorn and long in the employ of the Dutch East India Company. Engaged in 1615 by the merchant Isaac Le Maire to find a western route to the East Indies, he set sail with his patron from Tekel, discovered the strait known by the name of the latter, separating Staten Island from the main island of Tierra del Fuego, and was the first to round Cape Horn, which he named after his birthplace. Since that time the outer route around the extremity of the continent has been used by sailing vessels in preference to the inner passage through the Straits of Magellan. Arriving in India, Schouten rejoined the service of the East India Company. He died in Madagascar.

SCHOUWEN, skou'vën. One of the islands forming the Dutch Province of Zealand (q.v.).

SCHRADER, shrä'dër, ERICHARD (1836-). A German Orientalist, especially famed in Assyriology. He was born in Braunschweig, studied at Göttingen under Ewald, and was successively appointed professor of theology at Zürich (1863), at Giessen (1870), and at Jena (1873), and in 1875 was called to the chair of Oriental languages in Berlin. He wrote: *Studien zur Kritik und Erklärung der biblischen Urgeschichte* (1863); *Die assyrisch-babylonischen Keilschriften* (1872); *Die Keilschriften und das Alte Testament* (1872, 2d ed. 1883); *Die Hellenfahrt der*

of the Venetian empire (1874); and *Die Alpen der Ostalpbayern* (1884).

SCHRAUDER, JULIUS (1815-1900). A distinguished German historical painter, born in Coblenz. He entered the academy of that city at the age of seventeen, and in 1837 he went to Düsseldorf to study under Schadow, whose pupil he remained until 1845. At Rome he painted his first picture of significance, "The Capitulation of Calais in 1347" (1847, National Gallery, Berlin). Then followed "Frederick the Great After the Battle of Kolin" (1849, Leipzig Museum), "Wallenstein and Seni" (1850), and "The Death of Leonardo da Vinci" (1851). By the last his reputation was assured and he was offered a professorship in the Academy at Berlin, of which he afterwards became associate and senator. Other well-known pictures are: "Consecration of the Church of Saint Sophia in Constantinople" (1853), fresco, New Museum, Berlin; "Parting of Charles I. from His Family" (1855), "Esther Before Ahasuerus" (1856), "Honage of Berlin and Cologne in 1415" (1874), all in National Gallery, Berlin. Schrauder also executed mural paintings in the Chapel Royal, Berlin, as well as several portraits. His work is distinguished by its fine color, its masterly treatment of the nude, and its historic accuracy.

SCHRADER, OTTO (1855—). A German comparative philologist, born at Weimar, and educated at Jena and Leipzig. First a teacher in the gymnasium at Jena, he afterwards became professor in the university there. An authoritative writer on linguistic archæology, he is known by *Linguistisch-historische Forschungen zur Handlungsgeschichte und Warenkunde* (1886), *Sprachvergleichung und Urgeschichte* (1883; 2d ed. 1890; Eng. trans., *Prehistoric Antiquities of the Aryan Peoples*), and his *Reallikon der indogermanischen Alterthumskunde* (1901).

SCHRADIECK, HERZOG, HENRY (1846—). A German violinist, born at Hamburg. He studied with Léonard at Brussels, and with David at Leipzig. He taught at the Moscow Conservatory (1864-68) and later was concertmeister at Hamburg and at Leipzig. From 1883 to 1889 professor at the Cincinnati Conservatory, he went back to Germany to conduct the Hamburg Philharmonic Society. In 1894 he returned to America as professor at the National Conservatory and later occupied a similar position in Philadelphia. Among his works are *25 grosse Studien für Geige allein*, *Scale Studies*, *Technical Studies*, and *Guide to the Study of Chords*.

SCHRAUDOLPH, SHRAUDOLF, JOHANN VON (1808-79). A distinguished German religious painter, born at Oberstdorf. In 1825 he went to the Academy of Fine Arts in Munich, where he studied under Schlotthauer. There he was employed by Cornelius in frescoing the Glyptothek and by Hess in the decoration of the All-Saints Chapel in the Basilica of Saint Boniface. He designed windows for the Church of Saint Martin's at Landshut and for the Cathedral of Regensburg. In 1844 he received from King Ludwig I. of Bavaria the important commission of decorating the entire Cathedral of Speyer. The work occupied him nine years. Many altar pieces and easel pictures are also from his brush, among which may be mentioned a large "Ascension of Christ," "Esther Before Ahasue-

rus," and "Fishing in the Sea of Tiberias," all in the New Pinakothek, Munich. His work shows a depth and sincerity of sentiment reminiscent of the Pre-Raphaelites, although purely modern in treatment.

SCHRAUF, SHROUF, ALBRECHT (1837-97). An Austrian mineralogist, born and educated in Vienna. He was assistant curator (1861-67), and until 1874 curator of the Royal Museum of Minerals, and then after eleven years as docent in the university became professor of mineralogy. He published *Atlas der Krystallformen* (1864-78), *Lehrbuch der physikalischen Mineralogie* (1866-68), *Physikalische Studien* (1867), *Handbuch der Edelsteinkunde* (1869), and *Mineralogische Beobachtungen* (1871-76).

SCHREIBER, SHREIBER, HEINRICH (c.1476). A German mathematician, supposed to have been born at Erfurt, but the place and date of his death are unknown. He wrote under the Greek name Grammatens, and by this he is generally known. He studied first at Cracow and wrote while there (1514) an *Algorismus Proportionum*. Soon after (1518) he went to Vienna, where he became a professor in the university. The lectures being discontinued (1521) on account of an epidemic, Schreiber returned to Nuremberg and Erfurt and published (1523) a work on arithmetic and algebra which he had completed (1518) in Vienna. It is from this work, a decided contribution to German elementary mathematics, that he is chiefly known. He used the symbols + and —, though not the first to do so, and was the first, so far as known, to teach bookkeeping in the German language.

SCHREINER, SHREINER, OLIVE (1862—). An English novelist, the daughter of a Lutheran clergyman sent as a missionary from England to South Africa. She was born in Basutoland, South Africa, in 1862. In 1894 she married Mr. Cronwright. When about twenty years old she visited England, bringing with her the manuscript of her *Story of an African Farm*. After receiving the approval of George Meredith it was published with a few alterations in 1883 under the pseudonym of Ralph Iron and won instant success. It is best described as a spiritual autobiography representing the mental reaction by which an imaginative sensitive temperament passes from extreme Calvinism to hopeless atheism. Her other works include *Dreams* (1891), *Dream Life and Real Life* (1893), and *Trooper Peter Halket* (1897). In the South African War Mrs. Cronwright's sympathies were with the Boers. She expressed her opinions in *An English South African's View of the Situation* (1899).

SCHREVELIUS, SKREVE'LI-ŪS, CORNELIUS (c.1615-c.64). A Dutch classical scholar, born at Haarlem and educated mainly by his father, whom he succeeded in 1664 as rector of the University of Leyden. Schrevelius was a diligent and erudite man, but possessed little critical discernment. His most notable work was a *Lexicon Manuale Græco-Latinum et Latino-Græcum* (Leyden, 1654), which passed through many editions.

SCHREYER, SHREYER, ADOLF (1828-99). A German painter. He was born in Frankfort, where he received his artistic training at the Städel Institute, afterwards studying at Düsseldorf and Munich. Later he went to Paris, where he became a follower of Fromentin, depicting

chiefly Oriental subjects in a style characterized by brilliant color effects and strong dramatic action. He represents such subjects as the "Battle of Temesvár," "Arab Advance Guard," and "Cossacks in a Snow-Storm." He is especially a painter of horses, which he generally portrays in fiery action, their nostrils distended and manes flying in the wind. He at first resided at Frankfurt, but after a voyage to Algeria in 1861 he settled in Paris. He received gold medals at Brussels (1863), and at Paris in 1864, 1865, and 1867. Most of the principal American collections possess examples of his work.

SCHRIVER, shřiv'ēr, EDMUND (1812-99). An American soldier, born in York, Pa. He graduated at West Point in 1833, entered the Second Artillery, and served against the Seminoles in 1839. In 1846 he resigned from the army and became treasurer of the Rensselaer and Saratoga and other railroad companies. In 1861 he reentered the army as aide to Governor Morgan. From 1863 to 1865 he was inspector of the Army of the Potomac, and participated in the Shenandoah and Northern Virginia campaigns, in the battles of Chancellorsville and Gettysburg, and finally in the Richmond campaign. At the end of the war, during which he had risen to the grade of colonel and brevet major-general, he was appointed inspector of the Military Academy, which position he held from 1866 to 1871. He retired from active service in 1881.

SCHRÖCKH, shrök, JOHANN MATTHIAS (1733-1808). A German Church historian. He was born in Vienna, studied at Göttingen, became professor at Leipzig, 1762, and at Wittenberg, 1767. He is best known by his monumental *Christliche Kirchengeschichte*, 35 vols. (1768-1803), and *Kirchengeschichte seit der Reformation*, 10 vols. (1804-12), the last two volumes of which were added by H. G. Tzschirner. He also published *Allgemeine Biographie*, 8 vols. (1767-91), and *Lebensbeschreibungen berühmter Männer* (1789-91). Consult his *Life* by Tzschirner (Leipzig, 1812).

SCHRÖDER, shröd'ēr, FRIEDRICH LUDWIG (1744-1816). A noted German actor and dramatist, born at Schwerin. He early became an actor and achieved great fame, especially in tragic rôles. He became manager of the theatre at Hamburg in 1771. His management was distinguished for the high artistic standard which he maintained in his company and particularly for his introduction of several of Shakespeare's tragedies to the German public, perhaps his own best rôle being that of Lear. His work as a dramatist consisted largely of adaptations from the English. Consult his *Dramatische Werke*, with an introduction by Tieck (Berlin, 1831), and Litzmann, *Friedrich Ludwig Schröder* (Hamburg, 1890-94).

SCHRÖDER, KARL (1838-87). A German gynecologist, born in Neustrelitz and educated at Würzburg and Rostock. In Bonn he was assistant to Veit (1864-66) and docent, and in Erlangen he was from 1868 to 1876 professor and director of the lying-in hospital. From 1876 till his death he was professor in Berlin. He was a skillful and original operator, and the first to practice ovariotomy successfully in Germany. He wrote *Lehrbuch der Geburtshilfe* (1870; revised by Olshausen and Veit) and *Krankheiten der weiblichen Geschlechtsorgane* (1874; revised by Hotmeier).

SCHRÖDER, KARL (1848-). A German cellist and composer, born at Quedlinburg. He studied with Driescher at Dessau and with Kiel at Berlin. In 1874 he organized with his three brothers the Schroder Quartet, but in 1873 he was appointed first cello in the Brunswick Court Orchestra, in 1874 solo cellist in the Gewandhaus Orchestra at Leipzig, and in 1881 became Court Kapellmeister at Sondershausen. After 1866 he conducted successively the Opera at Amsterdam, Berlin, and Hamburg. He wrote a three-act opera, *Aspasia* (1892), a one-act opera, *Der Asket* (1893), a method and studies for the cello.—ALWIN (1855-), his brother, was born at Neubaldensleben. He received the appointment of first cello in Liebig's concert orchestra in 1875, occupied similar positions under Fliege and Laube at Hamburg, and in 1880 went to Leipzig as assistant to his brother Karl, succeeding him in the Gewandhaus. In 1886 he went to Boston, where he became a member of the Kneisel Quartet and first cellist in the Boston Symphony Orchestra.

SCHRÖDER, SOPHIE (1781-1868). A German actress. She was born at Paderborn, the daughter of an actor named Bürger. She appeared on the stage when only twelve years old, at Saint Petersburg, where her mother was acting. In 1795 she married Stollmers, the director of a company at Reval, but was separated from him soon afterwards. Her second husband, to whom she was married in 1804, was the singer Friedrich Schröder. He died in 1818, and she afterwards married the actor Kunst. She acted in all the principal theatres in Germany, and acquired a great reputation by her impersonations of Phædra, Medea, Lady Macbeth, and other tragic characters. She retired from the stage in 1840 and resided then in Augsburg. Consult Schmidt, *Sophie Schroder* (Vienna, 1870).

SCHRÖDER-DEVRIENT, de-vryän', WILHELMINE (1804-60). A German dramatic soprano, born in Hamburg. She studied with Mazatti of Vienna, and in 1821 at Vienna sang the rôle of Pamina in *The Magic Flute*, in which her success was so great as to secure for her the part of Fidelio in 1822, in which rôle she won wide reputation. Although possessed of a magnificent voice, she was deficient in technique, a fault which was usually lost sight of in the intensity of her acting.

SCHRÖDTER, shröd'tēr, ADOLF (1805-75). A German genre painter, engraver, and illustrator, born at Schwedt, Brandenburg. He studied line engraving under Bueckhorn, and painting under Schadow, principally at Düsseldorf, where he became the satirist of the school, ridiculing its sentimentality in humorous paintings, engravings, and lithographs. He designed series of such subjects as *Don Quixote, Münchhausen, Till Eulenspiegel, Much Ado About Nothing*, and illustrated a number of works, the best known of which is perhaps Detmold's *Leben und Thaten des Abcorderkten Piepmacher* (1848). Among his best known paintings are the "Wine Tasters" (1832), a "Rhenish Tavern Scene" (1833), "Don Quixote Studying Amadis" (1834), and "Fluellen with Ensign Pistol" (1839), all in the National Gallery, Berlin, and "Faust in Auerbach's Cellar" (1848). He excelled in frieze-like compositions, of which a well-known example

is "The Four Seasons," executed in water-colors (Kunsthalle Gallery). He was also an excellent actor.

SCHROEDER. Schröder, LEOPOLD VON (1846-91). A German Sanskrit scholar, born in Dorpat, and educated there and under Roth in Leuzingen. After having been docent at Dorpat he became professor of Sanskrit at Innsbruck in 1894, and at Vienna in 1899. His most important work is the valuable and very condensed *Passes of Theatre and Kultur* (1887). Besides, he edited the *Mātrāṇī Samhita* (1881-86), and the *Kāthakāva, die Saṁhita der Kātha-Śākhā* (1900), and published *Die formelle Unterscheidung der Redeweise in Griechischen und Lateinischen* (1874), *Pythagoras und die Inder* (1884), *Griechische Götter und Heroen* (1887), *Hochzeitssprüche der Esthen* (1888), and *Worte der Wahrheit*, a version of Buddhist proverbs (1892); the tragedy *König Sandara* (1887), and poetical versions of Sanskrit songs and proverbs, *Mangolblaten* (1892), and of Indian dramas for the German stage, *Princessin Zofe* and *Sakuntala* (1893).

SCHUBART. Schönbart, CHRISTIAN FRIEDRICH DANIEL (1739-91). A German poet and musician, born at Obersontheim, in Swabia. In 1763 he became a preacher in Geisslingen, and six years afterwards he was made director of music and organist in Ludwigsburg, but on account of quarrels and a parody he wrote upon the litany he was forced to leave. He led a restless and dissipated life at Heidelberg, Mannheim, Munich, Augsburg, and Ulm. At Augsburg he started in 1774 the *Deutsche Chronik*, a periodical, which met with universal favor in Germany. For ten years, from 1777 to 1787, he was arbitrarily imprisoned in the fortress of Hohenasperg by Duke Charles of Württemberg. After his release he put himself under the protection of the King of Prussia, and was made director of music of the Court and theatre at Stuttgart. Though not belonging to the school of *Stern und Drang*, Schubart possessed much of its spirit. While in prison he published an edition of his *sämmtliche Gedichte*. Among his finest single poems are "Die Fürstengruft" and "Hymnus auf Friedrich den Grossen." His complete works were published in eight volumes at Stuttgart in 1839-40.

SCHUBERT. Schönbert, FRANZ (1797-1828). A famous Austrian composer. He was born January 31, 1797, in Vienna. His violin lessons began at the age of eight. A few lessons from an elder brother, Ignaz, sufficed to start him on the pianoforte, and he continued to study by himself. In 1808 he passed his examination for the Court choir. The manuscript of a piano duet, *Leichenphantasie*, after Schiller, bears date April 8, May 1, 1810. He was not then fourteen; the next year was important in his development as a composer, for from it date his first songs, "Hagar's Klage" and "Der Vatermörder." Salieri, who was one of the instructors at the "Stadteonvict," where Schubert received a general schooling, was so struck with "Hagar's Klage" that he made arrangements for Ruziczka to give the boy lessons in harmony. At this time Franz already had composed chamber music, which he took home with him on holidays and tried over in the family circle. His brothers, Ferdinand and Ignaz,

played first and second violin, Franz himself viola, and his father cello.

In 1813 he began work on an opera, *Des Teufels Lustschloss*, and composed a symphony. During this year his voice broke, and he was obliged to leave the choir. Some of his most important compositions were written during this period—between his seventeenth and twentieth years. At this time, too, he formed a close attachment for Mayrhofer, whose melancholy disposition was the very opposite of Schubert's joviality. Of *Des Teufels Lustschloss*, finished in 1814, only the first and third acts remain. The composer gave the score to Josef Hüthenbrenner for a small debt, and in 1848 a servant lit the fire with the second act. Several of Schubert's other scores also met with a similar fate. One of his best masses, that in F, dates from this year.

In 1816, when he was only nineteen years old, he wrote his most famous song, "The Erlking," and another almost as famous, "The Wanderer." Josef Spann, who had provided him with music paper at the choir school, chancing to call upon him one afternoon found him working excitedly over Goethe's poem. The very same evening the composer appeared at the school with the finished song. It seems incredible at this day that five years should have elapsed before this immortal song was heard in public, yet such was the case. Previously, however, it had been sung frequently in private. To the "Erlking" year belongs, besides many other compositions, the *Tragic Symphony*. Although his application for the post of musical instructor in Laibach was unsuccessful, he was able to obtain freedom from the drudgery of teaching through the generosity of one of his admirers, Franz von Schober. He was a student at the University of Vienna, who, having heard some of Schubert's songs, recognized the genius of their composer, and invited Schubert to live with him. It was through this friend that Schubert was introduced to the famous barytone Johann Michael Vogl, who made many of his songs known.

In 1818 Count Johann Eszterházy offered Schubert the post of music teacher in his family, with a residence in winter in Vienna and in summer at Zekész, in Hungary. This arrangement, however, did not last long, for early in 1819 Schubert again was sharing Mayrhofer's quarters in Vienna.

The first public performance of a song by Schubert appears to have been at a concert in 1819, when the "Schäfer's Klagelied," sung by Franz Jäger, a tenor, was received with applause. About the same time he sent some of his settings of Goethe's poems, among them "The Erlking," to the poet. The latter, however, never acknowledged them; nor did he appreciate "The Erlking" until late in life, when he heard it sung by Schröder-Devrient. Vogl induced the management of the Kärnthnerthor Theatre to commission Schubert to set to music the farcical *Die Zwillingbrüder*. It was produced in June, and had six repetitions, without, however, making a decided impression.

Despite the large number of Schubert's compositions, and the fact that they were being more and more performed and admired in private circles, not one of them had yet been published. In 1821 Leopold von Sonnleithner, to put an end to the disgraceful neglect to which the composer was subject in his native city, took "The Erlking"

to the publishing houses of Diabelli and Haslinger. Both absolutely declined it, giving as reasons that the composer was unknown and that the accompaniment was too difficult. Somleithner then persuaded three others to share the expense with him, and had the song printed by Diabelli on commission. Other songs of his now were published and sold well, and he would have found himself in fairly comfortable circumstances had he not been absolutely without business instinct.

In December, 1823, he finished the opera *Alfonso und Estrella*, on which, off and on, he had been engaged for some time. The libretto is by Schöber, and it is said that Schubert set Schöber's lines to music as rapidly as the librettist wrote them. The opera was not brought out until 1854, when Liszt produced it at Weimar, but unsuccessfully, largely owing to the wretched libretto. One of Schubert's finest works, the *Unfinished Symphony*, dates from this period. This fragment consists of the first and second movements, which are familiar to concert goers, and nine bars of the scherzo. These are fully scored, but with them the manuscript comes to a complete stop, not even the most meagre sketch of the remainder having been discovered. This exquisite fragment was presented in its unfinished state by Schubert to the Musikverein at Gratz, in recognition of his election to membership, but was not heard until 1865, when it was performed in Vienna. Some incidental music written for *Rosamunde, Princess of Cyprus*, pleased greatly; but Schubert's genius seems to have been too lyric for opera, and of his few stage works which have been heard, only the little opera *Der häusliche Krieg*, which remained unknown until 1861, when it was brought out in Vienna, has had any success. The year 1823 is noteworthy for the composition of his charming song cycle *Die schöne Müllerin*.

During the few remaining years of his brief life he composed several of his finest works, most notable among them his great symphony in C. He presented the score to the Gesellschaft der Musikfreunde, of Vienna, in return for a purse of 100 florins, which they had voted him. They placed the symphony in rehearsal, but abandoned it as too difficult. The score was discovered in 1838 in Ferdinand Schubert's possession by Schumann, and by him sent to Mendelssohn, who produced it at a Gewandhaus concert, Leipzig, March, 1839. On November 4, 1828, Schubert called on the Court organist, Sechter, to arrange for lessons in counterpoint. Soon afterwards he took to the bed from which he never rose. "Die Taubenpost," the last of the *Schwanengesang*, composed in October, 1828, is generally regarded as his last composition. In the early stages of his final illness (typhoid) he gave some time to correcting the proof-sheets of his song cycle *Die Winterreise*. He died November 19th, and was buried near Beethoven's grave.

There is no doubt that as an orchestral composer Schubert had but just "found himself" in the C symphony, now ranked among the finest compositions of its class. It is not unlikely that, having established so high a standard for himself, he would have followed this symphony with others, but, allowing for the possibility of a decline in his powers, the world may well be satisfied with what he left. No composer, except Bach, has gained so much in fame since his death.

With the pure melodic line he combined in his *Lieder* wonderful powers of vocal expression, as well as vividness of description in the accompaniments. Notable examples are *The Erlking*, *Die junge Nonne*, in which the accompaniment gives the tolling of a bell above a raging storm, and *Auf dem Wasser zu steigen*, in which the water fairly ripples and sparkles around the vocal melody. The known list of his songs is over 600. Perhaps it was because Schubert's fame as a song composer overshadowed his other achievements that the latter were so tardily recognized at their full worth. His fascinating waltzes (the *Sourires de Vienne* in Liszt's arrangement) and his highly characteristic *Impromptus* and *Moments Musicaux* are frequently heard. In chamber music it is only necessary to mention his superb string quintet with the two cellos, the pianoforte trio, and the D minor string quartet to fix his rank. At least two of his masses and several of his smaller choral works are highly valued.

Consult: Kreissle von Hellborn, *Franz Schubert, eine biographische Skizze* (Vienna, 1861; enlarged ed. 1865; English trans. by Coleridge, London, 1869), the most scholarly work; Frost, *Schubert* (London, 1888), a good popular biography; and the biographies by Reissmann (Berlin, 1873), Niggli (Leipzig, 1880), Friedländer (ib., 1883), and Henberger (Berlin, 1902).

SCHUBIN, shōō'tin, OSSU. The pseudonym of the German novelist Lola Kirschner (q.v.).

SCHUCH, shōōg, WERNER (1843—). A German painter, born at Hildesheim. He studied architecture at the Polytechnic Institute of Hanover, after which he practiced his profession as architect and engineer until 1870, when he became professor at the Institute. He then took up the study of painting, continued it (1876) at Düsseldorf, and after his return to Hanover, in 1878, painted his first historical picture, "The Transportation of the Body of Gustavus Adolphus to Wolgast" (City Hall, Nuremberg). Having lived in Munich (1882-86), Berlin (until 1893), and Dresden (1895-99), he finally settled in Berlin. His other works include "From the Time of Dire Need" (1877), "General Zieten at Honnersdorf" (1886), "General Seydlitz at Rossbach" (1886), "Battle of Mückeln" (1895), all in the National Gallery at Berlin; "In Winter Quarters" (1884, Münster Gallery); "General Seydlitz Reconnoitring" (1885, Breslau Museum); "Apotheosis of Frederick III." (1893, Danzig Museum); and the mural painting "The Allied Monarchs at Leipzig" (1888, Feldherrenhalle, Arsenal, Berlin). Schuch is also known as a portrait painter and illustrator.

SCHUCHARDT, shōōch'ärt, HUGO (1842—). A German Romance philologist, born at Gotha. He was educated in the universities of Jena and Bonn. In 1873 he was appointed professor of Romance philology at Halle, whence he was called in 1876 to Gratz. His publications include: *Vokalismus des Vulgarlateins* (3 vols., 1866-68); *Ritornell und Terzine* (1874); *Slavo-Deutsches und Slavo-Italienisches* (1884); *Romanisches und Keltisches* (1886); *Aus Anlass des Volapüks* (1888); *Baskische Studien* (1893); and *Wortsprache und Welt Sprachen* (1894).

SCHÜCKING, shuk'ing, LEVIN (1814-83). A German novelist, born near Münster. He studied law at Munich, Heidelberg, and Göttingen, but,

(1841). A novel, based upon the law for the abolition of serfdom, published in 1842, were *Die deutsche literarische und romantische Welt* (1843) and *Die Deu. u. Koba und seine Volk* (1843). In 1843 he went to Augsburg as one of the editors of the *Allgemeine Zeitung*, and thence removed to Cologne to take charge of the *Kölnische Zeitung*. His numerous novels include: *Das Schloss am Meer* (1843); *Verschlungene Wege* (1867); *Die Helden und die Ritter* (1872); *Die Hebräer der Gerechtigkeit* (1878); *Das Recht des Lebens* (1880). After his death appeared *Lebenserinnerungen* (1886). Although not profound, these works are wholesome and agreeable.

His wife, LUISL VON GALL (1815-55), was born in Darmstadt. She published her first volume, *Frauenleben*, in 1844, and this was followed by the novels *Gegen den Strom* (1851) and *Der neue Kreuzritter* (1853). She was also the author of a successful comedy, *Ein schlechtes Gewissen* (1842).

SCHULTE, שולדע, JOHANN FRIEDRICH VON (1827-?). A German jurist, born at Winterberg, Westphalia. In 1854 he became professor of canon law at Prague. His opposition to the doctrine of Papal infallibility, as consistorial counselor, attracted much attention and criticism. In 1873 he became professor at Bonn. From 1874 to 1879 Schulte was a member of the German Reichstag, where he voted with the National Liberals. He is considered an authority on canon law. His publications include: *System des katholischen Kirchenrechts* (1855); *Die Lehre von den Quellen des katholischen Kirchenrechts* (1860); *Die Rechtsfrage des Einflusses der Regierung bei den Bischofswahlen* (1869).

SCHULTENS, שולטענס, ALBERT (1686-1750). A Dutch Semitic scholar. He was born in Groningen, studied there, at Utrecht, and at Leyden, and after two years as pastor at Wassenaar, near Leyden, in 1713 became professor of Oriental languages at Francker, whence in 1729 he removed to Leyden. There he became professor of Arabic—the study of which he insisted was a necessary adjunct to Hebrew—and of Hebrew antiquities. He was the first comparative philologist in Semitics, and wrote *Institutiones ad Fundamenta Lingue Hebraicae* (1737), *Origines Hebraicae* (1724-38), the unfinished *Institutiones Aramaicae* (1745-49), and versions, with commentaries, of Job (1737) and of the Book of Proverbs (1748).

SCHULTZ, שולטס, ALWIN (1838-). A German art critic and historian, born at Muskau, Lusatia. After studying archaeology and Germanic philology at Breslau, he established himself there as docent for art-history in 1866, was appointed professor in 1872, and called to the University of Prague in 1882. His most important publications include: *Schlesiens Kunstleben im 13. bis 18. Jahrhundert* (1870-72); *Die Legende vom Leben der Jungfrau Maria und ihre Darstellung in der biblischen Kunst des Mittelalters* (1878); *Das höfische Leben zur Zeit der Minnesinger* (2d ed. 1889); *Kunst und Kunstgeschichte* (2d ed. 1901); *Deutsches Leben im 14. und 15. Jahrhundert* (1892); and *Allgemeine Geschichte der bildenden Kunst* (1894 et seq.).

SCHULTZ, SH. JOHN CHRISTIAN (1840-96). A Canadian administrator, born in Amherstburg, Ontario, and educated at Victoria University

(M.D., 1861). In Riel's Rebellion (1870) Schultz was imprisoned and condemned to death by Riel for loyalty to the British flag and the Canadian party. From 1871 to 1882 he was a member of the Dominion House of Commons and from 1888 to 1895 Lieutenant-Governor of Manitoba. Schultz was a member of the Executive Council of the Northwest Territories, and president of the Manitoba Southwestern Railway. He died suddenly in Monterey, Mexico, about a year after he became K. C. M. G.

SCHULTZE, שולדעזע, FRITZ (1846-). A German philosopher, born at Celle and educated at Jena, Göttingen, and Munich. He was professor extraordinary of philosophy at Jena in 1875-76 and became in the latter year professor of philosophy and pedagogy in the Royal Polytechnic Institute of Dresden. Among his works may be named: *Der Fetischismus: Ein Beitrag zur Anthropologie und Religionsgeschichte* (1871); *Geschichte der Philosophie der Renaissance* (1st vol. 1874); *Philosophie der Naturwissenschaft* (1881-82); *Stammbaum der Philosophie* (1890); *Der Zeitgeist in Deutschland, seine Wandlung im 19. und seine mathematische Gestaltung im 20. Jahrhundert* (1894).

SCHULTZE, MAX SIGISMUND (1825-94). An eminent German anatomist and cytologist. He was born at Freiburg in Breisgau. After 1845 he studied at Greifswald and Berlin. In 1854 he was appointed adjunct professor in Halle, and in 1859 was called to the chair of anatomy in the University of Bonn. His chief works are on turbellarian worms (1851); on the Foraminifera of the Adriatic Sea (1854); on the embryology of various worms and of the lamprey; on the mode of termination of the finer nerves in the organs of sense; and on the electric organs of fishes; but his most notable contribution to general biology was his work on the nature of protoplasm and of cells (q.v.). He was the first, after Dujardin, to establish the nature of protoplasm of rhizopods and to show that it was the fundamental substance of both animals and plants. His results are embodied in his tract *Das Protoplasma der Rhizopoden und der Pflanzenzellen. Ein Beitrag zur Theorie der Zelle* (Leipzig, 1863). He adopted Mohl's term "protoplasm," applied by that botanist to plants alone, and extended it to include that of animals. Schultz was also the founder and editor of the *Archiv für mikroskopische Anatomie*.

SCHULZ, שולטס, ALBERT (1802-93). A German writer on mediæval literature, especially the Arthurian legends. He was born at Schwedt, studied law, and entered the judicial service at Magdeburg. His valuable studies in his special field, published under the pseudonym San Marte, include a version of the "Parzival" in *Leben und Dichten Wolframs von Eschenbach* (1836-41), *Die Arthursage* (1842), *Nemius und Gildas* (1844), *Beiträge zur bretonischen und keltisch-germanischen Heldensage* (1847), and *Rückblicke auf Dichtungen und Sagen des deutschen Mittelalters* (1872).

SCHULZ, JOHANN ABRAHAM PETER (1747-1800). A German composer, born at Lüneburg. He studied with Kirnberger at Berlin, taught there, and became musical director at the French theatre in 1776, holding the appointment for two years. In 1780 he became Kapellmeister to Prince Heinrich at Rheinsberg and afterwards

was conductor at Copenhagen. He published: *Gesänge am Charis* (1779) and *Lieder im Volkston* (1782), which were printed together, with augmentations, as *Lieder im Volkston* in 1785; *Chansons Heiliges* (1782); operettas and operas; the oratorio *Johannes und Maria*; and the passion cantata *Christi Tod*. He was a song composer of great originality.

SCHULZ, MORITZ (1825-1904). A German sculptor, born at Leobschütz, Upper Silesia. He studied at the Industrial School in Posen, at the Berlin Academy, and as a pupil of Friedrich Drake. From 1854 to 1870 he lived in Rome, studying the old masters and executing numerous works. Upon his return he prepared for the Monument of Victory in the Königsplatz of Berlin a bronze relief of the battle of Königgrätz. A series of decorations by him representing elementary instruction in the arts of painting and sculpture occupies a place in the entrance to the National Gallery, together with a frieze, 22 meters in length, depicting "The Triumph of the Artists," or the history of German art as displayed in its chief representatives. His further works include a statue of Frederick the Great for Thorn, and numerous subjects derived from allegory or classical mythology.

SCHULZE, schul'tse, ERNST (1789-1817). A German poet, born at Celle. He studied theology at Göttingen, but afterwards devoted himself to philology. The death of Cécilie Tychoen, in whose memory his epic *Cécilie* (1818) was written, clouded all his later life. His writings are romantic in style and mainly in allegorical form. The epic *Die heuberte Rose* (1818), his last work, is a poem of classic beauty of style. *Sämtliche poetische Werke* were edited by Bontewek (3d ed., with biography by Marggraff, Leipzig, 1855).

SCHULZE, FRANZ EILHARD (1840—). A German zoölogist, born in Eldena and educated at Rostock and Bonn. He was professor at Rostock 1865-73, at Gatz, until 1884, and then at Berlin, where he became director of the Zoölogical Institute. Schulze sailed in the *Pomernia* expedition, while he was at Rostock; specialized on sponges, and wrote *Amerikanische Heactinelliden*. His most important single discovery was that of the sponge Hali-arcia, a mere germinal cell (1877).

SCHULZE, FRIEDRICH AUGUST (1770-1849). A German novelist, born in Dresden. His first novel, *Der Mann auf Feiersfüssen* (1801), was favorably received, but his work as a whole is without particular value. Under the pseudonym Friedrich Lann he wrote many volumes, and with Apel edited a *Gespensterbuch* (1810-14).

SCHULZE, FRIEDRICH GOTTLÖB (1795-1860). A German economist, born at Obergävernitz, near Meissen, and hence called Schulze-Gävernitz. He was educated at Leipzig and Jena; became professor in the latter university in 1821, and, after founding there an agricultural institute, the first connected with a German university, in 1832 went to Greifswald, where he established a similar training school. These institutions exercised great influence throughout Germany. In 1839 he returned to Jena. Schulze wrote *Deutsche Blätter für Landwirtschaft und Nationalökonomie* (1843-59), *Nationalökonomie oder Volkswirtschaftslehre* (1856), and the posthumous

Lehrbuch der allgemeinen Landwirtschaft (1863). A memorial to him was erected at Jena in 1867. Consult: Bünbaum, *Schulze als Reformator der Landwirtschaftslehre* (Frankfurt, 1860), and the biography by his son, Hermann (Heidelberg, 1888).

SCHULZE, JOHANNES (1786-1869). A German educator and administrator. He was born at Brühl, in Mecklenburg-Schwerin, studied at Halle, and taught at Weimar and Hanau. In 1813 he became chief counselor on education in Frankfurt, in 1815 a member of the Coblenz consistory, and in 1818 referendary to the Prussian Ministry of Education in Berlin, a post he kept until 1840, and one in which his great work of reforming the educational methods in the higher schools of Prussia was performed. In 1849 he was appointed director of the Department of Education, an office he resigned ten years afterwards. He was an ardent Hegelian and edited Hegel's *Phänomenologie des Geistes* (2d ed., 1841), and some of Winckelmann's works. Consult Varrentrapp, *Johannes Schulze und das höhere preussische Unterrichtswesen* (Leipzig, 1889).

SCHULZE-DELITZSCH, dä'lich, HERMANN (1808-83). A German economist and sociologist, the founder of the German coöperative movement. He was born at Delitzsch, studied jurisprudence at the universities of Leipzig and Halle, and subsequently held judicial positions at Nannburg and Berlin, playing a prominent part in the liberal movement of 1848-49 in Prussia. Schulze-Delitzsch advocated coöperation and devoted himself to the establishment of coöperative associations which should secure to the laborers the benefits of the wholesale market. Coöperative banks were also established, which lent money on moderate terms. He endeavored to accustom the people to rely upon their own initiative to improve their condition. He declared that the function of the State should be limited to assuring industrial and personal liberty. Schulze-Delitzsch's writings are chiefly in the form of pamphlets. His most important doctrines are embodied in: *Information on Professional and Labor Associations* (1850); *Manual of Association for Artisans and German Workmen* (1853); *Suppression of Social Reform by Lassalle* (1866); *Social Rights and Duties* (1867); *Development of Coöperative Associations in Germany* (1870). Consult Bernstein, *Schulze-Delitzsch, Sein Leben und Wirken* (Berlin, 1879).

SCHULZE-GÄVERNITZ, gä'vër-nitz, GERHART VON (1864—). A German economist, born in Breslau. He became professor at Freiburg in 1893, and at Heidelberg in 1896, and then returned to Freiburg. He wrote *Zum sozialen Frieden* (1890), *Grossbetrieb* (1892), *Thomas Carlyles Welt- und Lebensanschauung* (1893), *Volkswirtschaftliche Studien aus Russland* (1899), and other historical and critical studies.

SCHUMACHER, shü'mä'ch-er, HEINRICH CHRISTIAN (1780-1850). A Danish astronomer, born at Bramstedt, Holstein. He studied at Kiel, Jena, Copenhagen, and Göttingen. In 1810 he became adjunct professor of astronomy in Copenhagen. In 1813 he was appointed director of the Mannheim observatory, and in 1815 professor of astronomy and director of the Copenhagen observatory. In 1822 he published tables of the distances of Jupiter, Saturn, Mars, and Venus

of the *Monatliche Anzeigen*. In 1822 he began the publication of the *Monatliche Anzeigen*, which is continued as an unbroken series, and is regarded as perhaps the most important of astronomical periodicals. He also published, in cooperation with other eminent astronomers, *Astronomisches Jahrbuch* (1836-44).

SCHUMACHER, PETER. A Danish statesman, Count Gårdenfeldt (q.v.).

SCHUMANN, Klara (1819-96). Wife of Robert Schumann, and under her maiden name, Klara Wieck, one of the best known concert pianists of her generation. She was the daughter of Frederick Wieck (q.v.), from whom she received her musical education. At thirteen years of age she began the concert tours which made her famous and which led to her acquaintance with Schumann. After the death of her husband she lived for several years in Berlin, and during this period wrote some of her most charming songs. From 1878 to 1892 she served on the faculty of the Hoch Conservatorium at Frankfurt. Her compositions are largely in the style of her husband, and are marked by much sincerity and some originality. They include: Op. 12, 12 poems by Rückert, set to music by Robert and Klara Schumann (Nos. 2, 4, and 11 by the latter); a pianoforte concerto (op. 7); a trio (op. 17); the violin romances (op. 22); and several preludes, fugues, variations, and exercises.

SCHUMANN, Max (1827-89). A Prussian military engineer, famous for his efforts to utilize armor-plate in warfare. He was born in Magdeburg. At the time of the American Civil War he became interested in the subject of armored fortifications, which he proceeded to study in England (1863-65). During the Franco-Prussian War he was on fortification duty, and in 1872 he retired, immediately entering the Gruson works. There he devised an armored gun-carriage, an armored mortar-platform, a disappearing carriage, and a steel wire net for defense. A rotary iron-clad tower planned by him was adjudged at Bucharest (1885-86) superior to that of Mougin. Schumann described the salient features of his innovations in *Die Bedeutung dreifacher Geschützpanzer für eine durchgreifende Reform der permanenten Befestigung* (2d ed. 1885), and "Die Panzerlafetten und ihre fernere Entwicklung," in the *Internationale Revue* (1886). Consult Schröder, *Schumann und die Panzerfortifikation* (Berlin, 1890).

SCHUMANN, ROBERT (1810-56). A famous German composer. He was born at Zwickau, Saxony, where his father was a bookseller and publisher. At Zwickau he received little musical instruction beyond piano lessons from an old-fashioned, pedantic teacher, Kuntzsch. Until he was twenty-one years old he had no instruction in composition. He then placed himself under Heinrich Dorn at Leipzig. He had begun to compose, however, according to his own statement, when he was eleven years old, setting the 150th Psalm to music. His father died in 1826, and his mother being violently opposed to his choosing a musical career, Robert in 1828 contributed at the University of Leipzig as a law student.

Most important at Leipzig was his acquaintance with Friedrich Wieck, a gifted musician, and his daughter Klara, then in her ninth year,

and a surprisingly skillful pianist. Schumann placed himself under Wieck's instruction, continuing until 1829, when he entered the University of Heidelberg. As a result of his assiduous devotion to music, he soon became known throughout Heidelberg as a skillful pianist, and even received invitations to play at Mannheim and Mainz. His compositions in 1829 include several short pieces, which afterwards appeared among the *Papillons*, and in 1830 he composed his *Variations on the Name of Abegg*, which owed their origin to the lively impression made upon him by Meta Abegg. In the spring of 1830 Schumann went to Frankfurt to hear Paganini. The deep impression the great violinist's playing made upon him is shown by his adaptation and elaboration of several of the famous capriccios for the piano.

Schumann now determined to abandon law and devote himself to music. In notifying his mother he referred her to Wieck for an opinion as to his abilities, and on his mother's writing to Wieck, the latter's decision was in favor of Schumann. He was at last beginning to realize the disadvantage of having neglected theoretical studies. Yet even now he did not take up these at once. On his return to Leipzig he resumed his piano lessons with Friedrich Wieck and lived at his house. An accident for which he himself was responsible forced him to give up piano playing and devote himself wholly to composition. Dissatisfied with the progress he was making as a pianist, he devised a system of digital gymnastics, with the result that he injured the sinews of the third finger of his right hand so severely that he never fully regained its use. It was this forced abandonment of a pianist's career which led him to seek instruction in composition from Heinrich Dorn, who took him as a pupil.

The year 1831 is important because during it Schumann first came before the public as a musical critic, contributing to the *Allgemeine Musik-Zeitung* an enthusiastic critique of Chopin's *Don Juan Fantasia*. In November, 1832, he was in Zwickau, where at a concert given by Klara Wieck, then thirteen years old, a symphony by him in G minor, now wholly unknown, was performed. On his return to Leipzig he removed from the Wiecks' house, but continued on an intimate footing with the family. In 1833 he completed the Paganini transcriptions, and wrote his piano impromptu on a theme by Klara Wieck, a composition which has romantic interest, as the young pianist, with whom his relations at that time were wholly artistic, later became his wife and did much to make his music famous.

In 1834 Schumann and several other enthusiastic musicians and critics banded themselves under the name "Davidbündler" to wage war against philistinism in music, as David had against the Philistines. They established the *Neue Zeitschrift für Musik*. Schumann's contributions, when not over his own name, were signed Florestan, Eusebius, Meister Raro, "2" and "12." They were of the highest importance, for he possessed the gift of recognizing incipient genius. One of his later critiques in which, under the title "Neue Bahnen," he hailed Brahms, who was almost unknown, as a musical Messiah, is a most notable example of musical prescience. Through the columns of his paper he accelerated the growing fame of Schubert and Mendelssohn,

aided Franz and Gade, and practically introduced Berlioz to the musical world by his review of the *Symphonie phantastique*. In all matters relating to the achievements of other musicians he was most liberally appreciative, save in the case of Wagner, whom, at first inclined to regard favorably, he afterwards opposed.

Schumann's important musical work of 1834 was the *Etudes symphoniques*. The following year saw the production of two sonatas, the first, in F sharp minor, significantly dedicated "to Klara." Subsequently he went to Vienna in hopes of there placing the *Neue Zeitschrift* on a more remunerative basis, but was unsuccessful. It was during his Vienna sojourn, however, that he visited Schubert's brother Ferdinand and discovered Schubert's great *C major Symphony*. Friedrich Wieck had long opposed the marriage of his daughter to Schumann, but in September, 1840, they were at last united. The years of Schumann's uncertainty regarding the result of his ardent passion had been productive of some of his finest music. "Truly," he wrote to Dorn, "the contest for Klara has yielded much music." Several of the beautiful "Fantasie-stücke," "Novelletten," "Nacht-stücke," and the "Faschingsschwank aus Wien" for piano; his first symphony; and above all the songs, 138 in number, written in 1840, and including the famous "Liederkreis" and "Dichterliebe" of Heine and "Frauenliebe und Leben" of Chamisso, are among the productions inspired by his love for Klara.

When Mendelssohn founded the conservatory at Leipzig, Schumann, who was on terms of intimacy with him, became one of the instructors, but made little impression as a teacher. Among the important works composed before his removal to Dresden are the choral work *Das Paradies und die Peri* and the celebrated piano quintet. The Schumanns resided in Dresden from 1844 to 1850, when they settled in Düsseldorf. The principal works of the Dresden period are the piano concerto (op. 54), the *C major Symphony*, the opera *Genoveva* (unsuccessfully produced in Leipzig, 1850), the *Manfred* music, and the scenes from Goethe's *Faust*. Schumann's conductorship of the Chorgesang-Verein also was productive of much choral music.

Even while in Dresden he had suffered from attacks of melancholia, and these became frequent after he moved to Düsseldorf, whither he had been called as musical director. Here, nevertheless, he composed the *Rhenish Symphony* (inspired by the festivities incidental to the elevation of the Archbishop of Cologne to the rank of cardinal) and the *D minor Symphony*. On February 27, 1854, during a fit of melancholy, he attempted suicide by jumping into the Rhine. He was rescued and taken to a private asylum at Emdenich, near Bonn, where he died, July 29, 1856.

Schumann's compositions are essentially expressions of moods. He was one of the most subjective, most "intimate" of composers, and for this reason most successful in the more compact forms such as the *Lied*, and in one-movement pieces like his "Novelletten" and "Fantasie-stücke," or in works consisting of a series of smaller divisions like his "Kinder-scenen" and "Faschingsschwank." While this is true in a general way, the piano concerto, piano quintet, sonata in G minor, and his first and second symphonies rank among the best of their kind,

though, as regards the symphonies, his orchestration is far from brilliant. In his compositions he was one of the founders, and in his writings the chief advocate of the Neo-Romantic School, and perhaps nowhere have the tendencies of this school found more compact and eloquent expression than in his songs. They differ from those of his immediate forerunner, Schubert, in a closer interknitting of voice and accompaniment, in which respect Brahms is, par excellence, Schumann's successor. Consult the biographies by Wasielewski (Eng. trans., Boston, 1871), Reissmann (Berlin, 1879), Spitta (Leipzig, 1883), Fuller-Maitland, in the "Great Musicians" series (New York, 1884), Erler (Berlin, 1887), Riemann (Leipzig, 1887), and Batka (ib., 1892). Also Jansen, *Die Darschneider* (Leipzig, 1893); Wasielewski, *Schumanniana* (Bonn, 1881); and Vogel, *Schumanns Klaviertempo* (Leipzig, 1887).

SCHUMANN-HEINK, Hink, ERNESTINE, née ROSSLER (1861—). A German dramatic contralto, born at Lieben, near Prague. She studied with Marietta von Leclair at Gratz, and made her debut at Dresden in 1878, as Azucena in *Il Trovatore*. For four years she sang in Dresden, and from 1883 in the Hamburg Stadttheater. In 1896, at Bayreuth, she took the rôle of Erda, Waltraute, and the first Norn, in *Der Ring des Nibelungen*. She was married to Heink in 1883, and to Paul Schumann in 1893. She made her American debut in 1898, and sang with uniform success in Chicago, New York, and other cities.

SCHÜRER, shūr'ēr, EMIL (1814—). A German Lutheran theologian. He was born in Augsburg, studied theology at Erlangen, Berlin, and Heidelberg, became professor of theology successively at Leipzig, 1873, Giessen, 1878, Kiel, 1890, and Göttingen, 1895. He has published *Die Gemeindefassung der Juden in Rom* (1879), *Die ältesten Christengemeinden im römischen Reich* (1894), and, the work by which he is best known, *Geschichte des jüdischen Volkes im Zeitalter Jesu Christi* (1886-90; Eng. trans., 1886-90). After 1876, with Adolt Harnack, he edited the *Theologische Literaturzeitung*.

SCHURMAN, shūr'mān, JACOB GOTTLIB (1834—). An American educator, born at Freetown, Prince Edward Island. He began his academic education at Acadia College, Nova Scotia, and in 1875 won the Gilchrist Canadian Scholarship at the University of London, where he received his degree in 1877. Afterwards he studied at the University of Edinburgh, and at Heidelberg, Berlin, and Göttingen. From 1880 to 1882 he was professor of psychology, political economy, and English literature at Acadia College; from 1882 to 1886 was professor of English literature and philosophy at Dalhousie College, and in the latter year became professor of philosophy at Cornell University. In 1891 he was appointed dean of the Sage School of Philosophy at Cornell, and in 1892 succeeded Charles Kendall Adams (q.v.) as president of the university. He became editor of the *Philosophical Review* in 1892. In January, 1899, he was appointed by President McKinley chairman of the first Philippine Commission, and spent the greater part of the succeeding year in the Philippine Islands. His publications include: *Kantian Ethics and the Ethics of Evolution* (1881); *The Ethical Import of Darwinism* (1888); *Belief in God* (1890); *Agosticism and*

THE GREAT SCHÜTT ISLAND. *See* *Islands of Europe*: I. D. 117, 2, 1901.

SCHURZ, CARL (1829-91). A German statesman and political leader, born at Gern, Prussia. He was educated at the gymnasium of Cologne and the University of Bonn, and, after a brief period, he became the associate of Ferdinand Kinkel (q.v.), then professor at Bonn, in the publication of a liberal newspaper, and was engaged in the revolutionary movement of 1848-49, as a result of which he was forced to flee to Switzerland. In 1850 Schurz returned secretly to Germany, and with great skill succeeded in bringing about the memorable escape of Kinkel from the fortress of Spandau. After a residence in Paris as correspondent for German papers, and in London, where he was a teacher, he emigrated to the United States in 1852, settling first in Philadelphia and afterwards in Wisconsin, where he made Republican campaign speeches in German in 1856, and the next year was an unsuccessful candidate for Lieutenant-Governor. In 1859 he began to practice law in Milwaukee. He was a delegate to the National Republican Convention in 1860, and delivered both English and German speeches, of remarkable eloquence, during the canvass of that year. In 1861 he was appointed Minister to Spain by President Lincoln, but resigned on the outbreak of the Civil War and joined the army. He was made brigadier-general in 1862; commanded a division at the second battle of Bull Run, was commissioned major-general in 1863, led the Eleventh Corps at Chancellorsville, participated in the battles of Gettysburg and Chattanooga, and at the close of the war made a tour of inspection through the Southern States as a special commissioner appointed by President Johnson to inquire into the condition of affairs in the seceded States, his report having considerable influence. He was Washington correspondent of the *New York Tribune* in 1865-66, founded the *Detroit Post* in 1866, and the next year became editor of the *Saint Louis Westliche Post*.

From 1869 to 1875 he served as United States Senator from Missouri. He opposed many of the measures of the Grant administration, took a leading part in the organization of the Liberal Republican movement, and in 1872 presided over the Cincinnati convention which nominated Greeley for President. He supported Hayes in 1876, and afterwards served in his Cabinet as Secretary of the Interior (1877-81). In 1881-84 he was editor of the *New York Evening Post*. In the Presidential campaign of 1884 he was one of the earliest among the Independent Republicans to repudiate the nomination of Blaine, and in New York, New Jersey, Connecticut, and several Western States, he made vigorous speeches, favoring the election of Cleveland. During his term of office as Secretary of the Interior and after his retirement from public life, he was an enthusiastic advocate of civil-service reform, in support of which he wrote many articles and reports and delivered many speeches. His publications include biographies of Henry Clay (1887) and of Abraham Lincoln (1891).

SCHÜTT, SHUT. Two islands in the Danube, situated in the Hungarian plain between Pressburg and Komorn, and mostly in these two counties. GREAT SCHÜTT ISLAND is bordered by the

Danube proper on the south and west, and by the Little Danube and the Schwarzwasser (Oeregduna) (Map; Hungary, E 3). It is 58 miles long, from 10 to 20 miles wide, and is subject to the floods of the rivers, being low and even. Owing to its rich soil, it is called the Golden Garden of Hungary. Grain, fruits, and vegetables are raised. There are sugar factories. It has several towns, including Komorn, which is situated in the southeast corner of the island. The total population is about 23,500.—LITTLE SCHÜTT ISLAND, bordered by the Danube proper on the north and east, and by the Wieselburger Danube, and lying to the southwest of Great Schütt Island, is 28 miles long. It belongs to the counties of Raab and Wieselburg.

SCHÜTZ, SHUTS, HEINRICH, known by the Latinized form of his name as SAGITARIUS (1585-1672). The most important German composer of the seventeenth century, born at Küstritz, near Gera, Saxony. At the age of fourteen he became a chorister of the Court Chapel at Cassel, in which city he also attended the gymnasium. In 1607 he went to Marburg University, to study jurisprudence. He abandoned the law, however, and went to Italy, where he studied under Giovanni Gabrieli until the death of that master in 1612. In 1617 he was appointed Kapellmeister to the Elector of Saxony in Dresden, with whose orchestra he had been connected for two years. He was a prolific composer and writer and has been well described as "standing at the parting of the ways between Palestrina and Bach." In his writing he combined the impressive Italian choral style with the new dramatic monodic style of Monteverde. He was the composer of the first German opera, *Dafne* (1627).

SCHUYLER, ski'ler, EUGENE (1840-90). An American diplomat and historian. He was born in Ithaca, N. Y. After graduation at Yale (1859), he practised law in New York, entered the diplomatic service (1866), was made consul at Moscow (1867-69), at Reval (1869-70), and secretary of legation at Saint Petersburg (1870-76). In 1873 he traveled for eight months through Russian Turkestan, Khokan, and Bokhara, and wrote *Turkestan* (1876). In 1876 he was made secretary of legation and Consul-General at Constantinople, and prepared a report on Bulgarian atrocities that had international consequences. He was subsequently consul at Birmingham (1878) and Rome (1879), chargé d'affaires and Consul-General at Bucharest (1880), and (1882-1884) Minister Resident and Consul-General to Greece, Servia, and Rumania; then, returning to America, he devoted himself to literary work. He was Consul-General at Cairo till his death. His chief books are *Peter the Great, Emperor of Russia* (1884) and *American Diplomacy and the Furtherance of Commerce* (1886). His chief essays were posthumously collected in *Italian Influences*, with an accompanying volume *Selected Essays, with a Memoir by Evelyn Schuyler Schaeffer* (1901). Schuyler was also translator of Turgeneff's *Fathers and Sons* (1867) and Tolstoy's *The Cossacks* (1878).

SCHUYLER, MONTGOMERY (1843-). An American journalist, born in Ithaca, N. Y. He studied at Hobart College, but did not graduate, and in 1865 joined the staff of the *New York*

World, remaining with that paper in various capacities until 1883, after which he was an editorial writer on the *New York Times*. He made a special study of architecture, upon which subject he was a frequent contributor to magazines. He published *The Brooklyn Bridge* (1883), with William C. Conant, and *Studies in American Architecture* (1892).

SCHUYLER, PHILIP (1733-1804). An eminent American soldier and statesman, born November 20, 1733, at Albany, N. Y. Entering the English army on the outbreak of the French and Indian War, he served as captain in 1755, and as captain and commissary in 1756. In 1757 he resigned, but reentered the army, as major, in 1758, and served as such until the close of the war. He was elected to the Colonial Assembly in 1768, and in May, 1775, was a delegate to the Continental Congress, by which he was made a major-general on June 19. Being assigned by Washington to the command of the Northern Department, he organized the expedition against Canada, which was to proceed by way of Lake Champlain, but he was forced by illness to depute the active leadership of the invading troops to General Richard Montgomery (q.v.). Returning to Albany, he directed operations against the Indians and Tories, and, as Indian Commissioner, carried on important negotiations with the Six Nations. Meanwhile General Horatio Gates (q.v.) and many of the New England delegates, who had been offended by Schuyler's attitude in the New-York-Massachusetts boundary disputes, began scheming for his removal; and in September, 1776, disgusted at these intrigues, he sent in his resignation, which, however, was not accepted by Congress. In April, 1777, a Congressional court of inquiry strongly commended him for his conduct hitherto, but the attacks continued, being especially bitter after St. Clair's evacuation of Ticonderoga, and on August 19 General Gates was appointed to supersede him in command of the Northern Department. Schuyler, however, remained with the army and assisted very materially in the operations against Burgoyne. A court-martial, convened in October, 1778, acquitted him with the highest honor of all charges, and his resignation having been accepted April 19, 1779, he became one of New York's representatives in Congress, serving until 1781. After the war he was one of the leaders of the Federalist Party, and held many important State offices, besides representing New York in the United States Senate in 1789-91 and again in 1797-98. While serving in the State Senate he helped codify the New York laws, and ardently advocated the building of State canals. Throughout his public career he was conspicuous for his great abilities, his staunch patriotism, and his unselfish devotion to duty. His daughter Elizabeth married Alexander Hamilton. Consult his *Life* by Lossing (New York, 1872) and Tuckerman (ib., 1903).

SCHUYLKILL, skōŭ'kil. A river of Pennsylvania, rising in the highlands of Schuylkill County and flowing southeast 125 miles to the Delaware, which it joins at Philadelphia (Map: Pennsylvania, F 3). It has been improved for slack-water navigation nearly to its source; it furnishes the greater part of Philadelphia's water supply, and affords extensive wharfage in its course through the city.

SCHWAB, shvāb, GUSTAV (1792-1850). A German poet, scholar, and pastor, born at Stuttgart. He studied at Tübingen, taught at Stuttgart, became pastor at Gomaringen (1837) and in Stuttgart (1841). In poetry he regarded himself as "the eldest pupil of Uhland," but he lacked his classic simplicity and sense of form. Several of his ballads are deservedly popular for their purity and warmth of feeling. His *Gedichte* (1828-29) were revised and pruned as *Neue Auswahl* (1838) and are still reprinted. Schwab wrote in prose a *Life of Schiller* (1840), *Die schönsten Sagen des klassischen Altertums* (1838-40; often reedited), *Deutsche Volksbücher* (1843; often reprinted), and a *Wagereiser durch die Litteratur der Deutschen* (1846). Consult Klüpfel, *Gustav Schwab als Dichter und Schriftsteller* (Stuttgart, 1884).

SCHWAB, shvāb, JOHN CHRISTOPHER (1865—). An American economist and historian, born in New York City. He graduated at Yale in 1886, and after post-graduate study there, at Berlin, and at Göttingen, became professor of economics at Yale in 1898. He wrote *History of the New York Property Tax* in the publications of the American Economic Association (vol. v., 1890; and in German in the *Jahrbuch staatswissenschaftliche Studien*, vol. iii., pt. 3, 1890); a monograph on the history of the curriculum of Yale College; and the important *The Confederate States of America* (1901).

SCHWABACH, shvā'bāc. A town of the Province of Middle Franconia, Bavaria, 9 miles south of Nuremberg. The Gothic Church of Saint John, dating from 1469, contains a magnificent altar-piece by Veit Stoss, and fine old paintings. The Gothic ciborium, nearly fifty feet high, is the work of A. Krafft. The market place contains a beautiful fountain built in 1617. Gold and silver wire is manufactured. The famous Schwabach needles are made here. The Schwabach Articles (1529) were the basis for the Augsburg Confession (1530). Population, in 1900 9385.

SCHWABE, shvā'be, LUDWIG VOX (1835—). A German classical philologist, born at Giessen. He became professor in the University of Tübingen. His important publications are: *Quæstiones Catullianæ* (1862); *Catullus* (1866, 1886); *De Musæo Nouni Imitatore* (1876). He was also editor of the fifth edition of Toulet's *Geschichte der römischen Litteratur* (1890).

SCHWABENSPIEGEL, shvā'ben-spīgəl (Swabian Mirror). A mediæval German law-book, compiled probably by an ecclesiastic of the cathedral chapter at Bamberg, about 1259. Its main source was the *Sachsenspiegel* (q.v.), and it attained legal authority chiefly in Swabia, Alsace, Franconia, Switzerland, and Austria. It was written in Upper-German and printed at an early period, probably at Augsburg; the first dated edition is of 1480. A thorough critical edition, by Roekinger, under the auspices of the Vienna Academy of Sciences, is in preparation.

SCHWÄBISCH HALL, shvā'bīsh hāl. A town of Germany. See HALL.

SCHWALBACH, shvāl'bāk (officially called LANGEN-SCHWALBACH). A mineral spa, 13 miles by rail northwest of Wiesbaden, in Hesse-Nassau, Germany. It was a fashionable watering place in the seventeenth and eighteenth centuries, but is

of the island, and only 7000 persons. The soil is fertile, and carbonic acid. Population, 1000, in 1777.

SCHWALBE, shvãl'te, BENEDIKT, A German Franciscan monk. See CHILDONIUS.

SCHWANN, shvãn, THUDOR (1810-82). A German physiologist and histologist, born at Neuss and educated in Bonn, Würzburg, and Berlin. In the Anatomical Museum of Berlin, he assisted Johannes Müller from 1831 to 1838, and discovered pepsin, made valuable studies on artificial digestion, fermentation, and putrefaction, the organic nature of yeast, the mechanism of muscular and arterial contraction, the double direction of nerves, and the envelop of nerve fibres. In 1838-48 he was professor at Louvain, and then held a chair at Liège for another decade. Schwann made many physiological discoveries, but his most important achievement was his foundation of the modern cellular theory in *Microscopical Investigations on the Accordance in the Structure and Growth of Plants and Animals* (1839; Eng. version, 1847). He wrote "Anatomic du corps humain" for the Brussels *Encyclopédie populaire* (1855).

SCHWANTHALER, shvãn'tã'lër, LUDWIG VON (1802-48). A German sculptor, born at Munich. He studied under his father, Franz Schwanthaler (1762-1820), a sculptor, and in the Munich Academy. His first royal commission was received in 1824 from King Maximilian I., an order for a silver épergne with reliefs from the myth of Prometheus. Thereafter he enjoyed a greater share of the patronage bestowed upon the art by the House of Wittel-bach. In 1826 King Louis I. sent him to Rome. Upon his return to Munich the next year, he was commissioned to execute reliefs and decorative features for the New Glyptothek. To this period, also, belong the statue of Shakespeare in the vestibule of the Royal Theatre and the Bacchus frieze (205 feet long) in Duke Max's banqueting hall. In 1832 he went again to Rome, where he executed several groups for the southern pediment of the Walhalla at Regensburg, and models for his 24 statues of painters in the New Pinakothek. In 1835 he was appointed professor at the Munich Academy. About him gathered many of the most promising young sculptors in Germany, who were of great assistance in his numerous commissions. For Louis I. he executed Homeric reliefs in the Königsbau, and twelve colossal statues of Wittel-bach princes; also the pediments of the Walhalla at Regensburg and of the Propylæum at Munich, and the colossal bronze statue of Bavaria (1843-50), nearly 63 feet high, in front of the Ruhmeshalle at Munich. Mention must be made as well of his monuments to Jean Paul (1841), at Bayreuth; to Mozart (1842), at Salzburg; and to Goethe (1843), at Frankfort; of his statues of the Grand Duke Charles Frederick of Baden (1849; Karlsruhe), the Grand Duke Louis of Hesse (Darmstadt), the Margrave Frederick Alexander of Brandenburg (1843; Erlangen), and the Emperor Rudolph of Hapsburg (1843; Speyer cathedral); and of the charming relief of two dancers, besides other figures in the palace at Wiesbaden. Consult Trautmann, *Schwanthalers Religion* (Munich, 1858).

SCHWARTZ, shvãrts, MARIE ESPÉRANCE VON (known also as Pléps-Melena) (1821-99). A German author, daughter of the Hamburg banker

Brandt, born at Southgate, England. After a first early marriage she became the wife of the banker Von Schwartz, of Hamburg, from whom she eventually was separated. She then settled in Rome and devoted herself to literary work. A friendship with Garibaldi was one of the interesting features of her residence in Italy. Among her numerous works may be named: *Blätter aus dem afrikanischen Reisetagebuche einer Dame* (1849); *Garibaldis Denkwürdigkeiten* (1861); *Die Insel Kreta unter der ottomanischen Verwaltung* (1867); *Kreta-Biene, oder Kretische Volkshieder, Sagen, Lübes, Denk-, und Sittensprüche* (1874); *Garibaldi* (1884).

SCHWARTZ, MARIE SOFIA (1819-84). A Swedish novelist, born at Borås. As an author she was very popular, not only in Sweden, but also in Germany, where most of her writings were published. Her novels were frequently collected in German versions. The chief are: *Mannen of Bårdoch Quimman of Falke* (1858); *Arbetet Adlar Mannen* (1859); and *Arbetets barn*, which has been reprinted in America (1894).

SCHWARTZ, WILHELM (1821-99). A German mythologist. He was born in Berlin, studied there and in Leipzig, taught for twenty years in the Werder gymnasium in Berlin, and was director, successively, of the gymnasiums at Neuruppin (1864-72), then, until 1882, of the Friedrich-Wilhelm Gymnasium at Posen, and from 1882 until 1894 of the Luisen Gymnasium at Berlin. He wrote: *Markische Sagen und Märchen* (1843) and *Norddeutsche Sagen* (1849), both results of early studies and travels with Adalbert Kuhn; *Ursprung der Mythologie* (1860); *Die poetischen Naturschauungen der Griechen, Römer und Deutschen in ihrer Beziehung zur Mythologie* (1864-79); *Prähistorisch-anthropologische Studien* (1884); and *Nachklänge prähistorischen Volksglaubens im Homer* (1894).

SCHWARTZE, shvãrt'se, HERMANN (1837—). A German aurist, born at NeuhoF, in Pomerania, and educated in Berlin and Würzburg. He became docent in 1863, professor in 1868, and director of the aural clinic in 1884 at the University of Halle. One of the founders of modern otology, Schwartze made a particular study of the anatomy of the ear and improved the methods of paracentesis on the tympanic membrane, and of the opening of inflamed apophyses of the middle ear. He wrote *Praktische Beiträge zur Ohrenheilkunde* (1864), *Pathologische Anatomie des Ohrs* (1878), and *Lehrbuch der chirurgischen Krankheiten des Ohrs* (1885); was coëditor with Berthold of the *Handbuch der Ohrenheilkunde* (1892-93); and in 1872 became editor of the *Archiv für Ohrenheilkunde*.

SCHWARZ, shvãrts, BERTHOLD. A Franciscan monk of the fourteenth century, whose name is thought to have been Konstantin Anklitzen. He is said to have discovered gunpowder while in prison for sorcery, about 1330. It is, however, probable that gunpowder had been known before, and that Schwarz only utilized it for military purposes. There is a monument to him at Freiburg, which is assumed to be his birthplace.

SCHWARZ, HERMANN AMANDUS (1843—). A German mathematician, born at Hermsdorf, in Silesia, and educated in Berlin. He became professor at Halle in 1867, at the Zurich Polytechnic

in 1869, at the University of Göttingen in 1875, and at Berlin in 1892. Schwarz was a follower of Weierstrass, some of whose lectures he edited under the title *Formeln und Lehrsätze zum Gebrauche der elliptischen Funktionen* (1883-85; 2d ed. 1893). His own works on minimal surfaces and the theory of functions include *Bestimmung einer speziellen Minimalfläche*, which was crowned by the Berlin Academy in 1867 and printed in 1871, and *Gesammelte mathematische Abhandlungen* (1890).

SCHWARZBURG-RUDOLSTADT, shvãrt's-böörk röö'döl-stãt. A principality and constituent State of the German Empire, situated in Thuringia, and consisting of several detached portions. The capital, Rudolstadt, is 18 miles south of Weimar. Total area, 363 square miles. The western and larger part belongs to the region of the Thuringian Forest, and reaches an elevation of 2900 feet. The eastern part is lower. The chief river is the Saale. Agriculture is the principal occupation. There are extensive forests in the western part, and good pasture land. The chief mineral deposits are iron, lignite, gypsum, and slate. In the western district are numerous glass and porcelain factories. Other manufactures are paper, toys, textiles, musical instruments, and flour. The Diet of the principality consists of 16 members, of whom four are elected by the highest taxed citizens and the rest by the general population for three years. The principality has one vote in the Bundesrat, and returns one member to the Reichstag. Population, in 1900, 93,059, chiefly Protestants. In this principality is the Castle of Schwarzburg, romantically situated on the Schwarz, the summer residence of the Prince.

The ruling family is one of the oldest of the Thuringian princely houses. The mediæval countship of Schwarzburg was divided at the close of the sixteenth century into the two countships of Schwarzburg-Rudolstadt and Schwarzburg-Arnstadt, the later Schwarzburg-Sondershausen. About a century later the ruling houses were elevated to the princely dignity.

SCHWARZBURG - SONDRERSHAUSEN, zôn'ders-hou'zen. A principality and constituent State of the German Empire, situated in Thuringia, and consisting of several detached districts, the main portion being inclosed within the Prussian Province of Saxony. Total area, 333 square miles. The Thuringian Forest covers part of the principality. The soil is mostly fertile, and agriculture is the principal industry. The forests are also important. There are numerous small porcelain factories, glass works, machine works, paint factories, tanneries, shoe factories, and sugar mills. The Constitution of the principality, dating from 1857, provides for a Diet of 15 members, of whom five are appointed by the Prince, five are elected by the highest taxed citizens, and five by the inhabitants in general, for a term of four years. The principality has one vote in the Bundesrat and returns one Deputy to the Reichstag. Population, in 1890, 75,510; in 1900, 80,898, principally Protestants. The capital is Sondershausen (q.v.); the largest town is Arnstadt. For history, see SCHWARZBURG-RUDOLSTADT.

SCHWARZENBERG, shvãrt's-en-böörk. A princely family, originally of Franconia, but later of Austria. About 1420 ERKINGER VON

SEINSHHEIM purchased the lordship of Schwarzenberg in Franconia, and in 1429 he was made a baron of the Empire by the Emperor Sigismund. Several of this family have been prominent in European affairs. The most notable are: (1) ADAM, Count of Schwarzenberg, was born in 1584, and became a privy counselor of George William, Elector of Brandenburg. He was largely responsible for the vacillating policy of Brandenburg during the Thirty Years' War, a course most unfortunate in its results, and for this he was punished after the accession of the Great Elector, in 1640, by imprisonment in the fortress of Spandau, where he died March 14, 1641. (2) KARL PHILIPP, Prince of Schwarzenberg. He was born at Vienna, April 15, 1771, served against the Turks, and rose to the grade of lieutenant field-marshal in 1799. He commanded a division under Mack in the campaign of 1805, and took part in the battle of Austerlitz. He was appointed Ambassador at the Russian Court in 1808, by the express wish of the Emperor Alexander; fought at Wagram in 1809; and after the Treaty of Schönbrunn conducted the negotiations preliminary to the marriage of the Archduchess Maria Louisa to Napoleon. Both in this capacity and as Ambassador at Paris he gained the esteem of Napoleon, and the latter expressly demanded for him the post of General-in-Chief of the Austrian contingent of 30,000 men which had been sent to aid France against Russia in 1812. Schwarzenberg with his little army entered Russia from Galicia, crossed the Bug, and achieved some slight successes, but was afterward driven into the Grand Duchy of Warsaw, and took up a position at Paltusk, where he concluded with the Russians an armistice which secured the French retreat. Schwarzenberg was much blamed for his dilatory conduct at the time; but Napoleon concealed any dissatisfaction he might have felt, and demanded for him from the Austrian Government the baton of field-marshal. After a brief sojourn at Paris, in April, 1813, Schwarzenberg was appointed to the command of the Austrian army of observation in Bohemia; and when Austria joined the allied powers, he became generalissimo of the armies of the coalition, was defeated by Napoleon at Dresden, but the united army under him gained the great victory of Leipzig. His dilatory tactics during the pursuit of the French across Germany and after the crossing of the Rhine was regarded with extreme dissatisfaction by men of the type of Blücher and Gneisenau, who were anxious to strike a decisive blow at the heart of the enemy. On the return of Napoleon from Elba, he obtained the command of the allied army on the Upper Rhine, and a second time entered France. On his return to Vienna he was made president of the Imperial Council for War. He died of apoplexy at Leipzig, October 15, 1820. Consult Prokesch-Osten, *Denkwürdigkeiten aus dem Leben des Feldmarschalls Fürsten Schwarzenberg* (Vienna, 1822). (3) His nephew, FELIX, an Austrian statesman, was born October 2, 1800, at Krumm, Bohemia. He entered the army, became military attaché of the Austrian embassy at Saint Petersburg in 1824, and afterwards held several diplomatic appointments. He was envoy to Naples when the revolution of 1848 broke out. He took the field in Upper Italy as a brigade commander, and soon after was made a lieutenant field-marshal. He was called to the head

of the Austrian Empire in November, 1848, and was an ardent supporter of the nationalistic plans advocated by the revolutionaries. He urged the aid of Russia to suppress the revolution, then rising, and followed the policy of statesmanship in opposing Prussia. He died in Vienna April 5, 1852. Consult Berger, *Die österreichische Föderation Schwarzenberg* (Leipzig, 1888); Vienna, 1881).

SCHWARZWALD, Schwärtz-Wäldt. The German name of the Black Forest (q.v.).

SCHWATKA, shwō'tkā, FREDERICK (1819-92). An American explorer, born at Galeua, Ill. He graduated at West Point in 1841, was commissioned second lieutenant, and served on garrison and frontier duty until 1857. During his army life he studied both law and medicine, was admitted to the Nebraska bar in 1875, and received his medical degree in New York in 1876. In 1878 he obtained leave of absence from the War Department, and connected, with W. H. Gilder, the final land search for traces of the Franklin expedition. Wintering (1878-79) among the Eskimos near Chesterfield Inlet, Hudson Bay, he set out in April, 1879, with four whites, fourteen Eskimos, and abundant ammunition, for the northern edge of the continent. He explored minutely the continental coast line to Point Seaforth, crossed Simpson Strait to King William Land, and thoroughly searched the region traversed by Franklin's retreating party. During three months on King William Land Schwatka found four despoiled graves, six unburied skeletons, and many relics of the ill-fated expedition. The journey was one of the most remarkable in the history of Arctic sledging and made Schwatka famous. In the 355 days during which he was absent from his base of supplies he traveled 2819 geographical miles, depending for food upon the game he killed. In 1883 he explored the course of the Yukon River, Alaska. He resigned his commission in the army in 1885, and in the following year made an unsuccessful attempt to ascend Mount Saint Elias. In 1889 he engaged in exploring work in Mexico. He received the Roquette Arctic Medal from the Geographical Society of Paris, and the medal of the Imperial Geographical Society of Russia. His great Arctic journey was described by Colonel Gilder in *Schwatka's Search* (New York, 1881); also in *The Franklin Search, Under Lieutenant Schwatka* (1881). His own writings were *Along Alaska's Great River* (1885); *Nimrod in the North* (1885); *Children of the Cold* (1886); and many articles contributed to geographical and other publications.

SCHWEGLER, shvāk'ler, ALBERT (1819-57). A German theologian and writer on the history of philosophy. He was born at Michelbach, in Württemberg, studied theology at the University of Tübingen, and was appointed professor there of classical philology in 1848. In theology and criticism he was of the 'Tübingen school.' In 1841 he started the *Jahrbücher der Gegenwart*. He published an annotated edition and translation of Aristotle's *Metaphysics* (1844-48); *Der Mythenausgang und die christliche Kirche des zehnten Jahrhunderts* (1841); *Das nach-apostolische Zeitalter* (1846); *Geschichte der Philosophie* (1848; Eng. trans. by J. H. Seelye, New York, 1856); and by J. H. Stirling, London, 2d ed., 1868); *Religionsgeschichte* (1853-58; 2d ed.,

1867-73). His *Geschichte der griechischen Philosophie* was published after his death (1859).

SCHWEIDNITZ, shvid'nits. A town in the Province of Silesia, Prussia, on the Weistritz, 31 miles southwest of Breslau (Map; Prussia, G 3). Its ancient fortifications have been replaced by promenades. The manufactures include woolens, leather, machinery, furniture, gloves, cigars, and organs. There are important cattle and grain markets. Schweidnitz was founded in the eleventh century, and received municipal privileges in 1250. It was formerly the capital of the Principality of Schweidnitz. Population, in 1900, 28,432.

SCHWEIGER-LERCHENFELD, lör'ken-felt, AMAND, Baron von (1846—). An Austrian traveler and writer, born in Vienna. He served in the army from 1865 to 1871, then set out on extensive travels, which he described in numerous popular works, and made Vienna his usual residence. A partial list of his writings includes: *Unter dem Halbmond* (1876); *Bosnien* (2d ed., 1879); *Serail und Hohe Pforte* (anon., 1879); *Das Frauenleben der Erde* (1881); *Der Orient* (1882); *Griechenland in Wort und Bild* (1882); *Das eiserne Jahrhundert* (1883); *Von Ozean zu Ozean* (1884); *Die Araber der Gegenwart* (1885); *Das Mittelmeer* (1888); *Die Erde in Karten und Bildern* (1889); *Unterwegs*, traveling pictures (1891-95); *Die Donau* (1895); *Im Lande der Cyclopen* (1899); *Das neue Buch von der Weltpost* (1901).

SCHWEIGGER, shvī'g'er, JOHANN SALOMO CHRISTOPH (1779-1857). A German physicist, born and educated in Erlangen. There he became docent in 1800, and, after teaching at Bayreuth (1803-11), and at the Nuremberg Polytechnic, returned to Erlangen as professor of physics and chemistry in 1817. Two years later he went to Halle. Schweigger devised an electrometer in 1808, and in 1820 invented the galvanometer (q.v.), in which he made use of Oersted's discovery of the effect of a current in a magnetic needle by surrounding the latter with a number of turns of the wire carrying the current. He founded the *Journal für Chemie und Physik*.

SCHWEIGGER, KARL (1830—). A German ophthalmologist, son of the preceding. He was born in Halle, studied there, at Erlangen, and Würzburg, and went to Berlin as assistant to Gräfe (1858-65). From 1868 to 1871 he was professor in Göttingen, and then succeeded Gräfe in Berlin. He edited the *Archiv für Augenheilkunde* (1881 et seq.), published a chart of optical tests (1876; 3d ed. 1895), and wrote a *Handbuch der speziellen Augenheilkunde* (1871), which passed through several editions.

SCHWEINFURT, shvīn'fūrt. A town in Lower Franconia, Bavaria, on the Main, 28 miles by rail northeast of Würzburg (Map; Germany, D 3). The sixteenth-century town hall contains a library and a museum of history and art. Schweinfurt is noted for its manufactures of dyes, including the well-known Schweinfurt green. Machinery, ball-bearings, engines, shoes, sugar, and tobacco are among its numerous products. There are important cattle, sheep, and swine markets. Schweinfurt, first mentioned in 791, became a free Imperial city in the twelfth century. It passed to Bavaria in 1803. Population, in 1900, 15,295.

SCHWEINFURTH, shvín'fóort, GLOBE (1836—). A German explorer, born at Riga. He studied natural history, particularly botany, at the universities of Heidelberg, Munich, and Berlin, and in 1864 went to Egypt, where he spent two years. In 1869 he set out from Khartoum to explore the countries along the White Nile. In 1872, on a commission from the Khedive, he founded the Institut Egyptien at Cairo, and in 1874 he visited the principal oases in the Libyan desert. During the following years he several times visited the oases of Arabia, of whose flora he made a thorough study, and explored the coast of Barea and the valley of the Nile. In 1888 he returned to Europe and took up his residence in Berlin. In 1901-02 he visited Egypt again, returning with rich archaeological and botanical collections. Among his publications are *The Heart of Africa* (1874) and *Artes Africane* (1875). In collaboration with Ratzel he also published *Emin Pascha, Reisebriefe und Berichte* (1888).

SCHWEINFURTHERS. See CHURCH TRIMPHANT, THE.

SCHWEINITZ, shvín'íts, EDMUND ALEXANDER DE (1825-87). An American bishop of the Moravian Church. He was born at Bethlehem, Pa., and studied theology at the Moravian Seminary there and at Berlin. He entered the ministry in 1850, and in the course of his pastoral life was stationed at Canal Dover, O.; Lebanon, Pa.; Philadelphia, Lititz, and Bethlehem, in Pennsylvania. In 1870 he was consecrated bishop of the Moravian Church. The latter years of his life were spent at Bethlehem, where he held the presidency of the seminary, and also the presidency of the governing board of the American Province of the Unitas Fratrum. He founded *The Moravian*, the weekly journal of his Church, in 1856, and for ten years was its editor. He was the author of *The Moravian Manual* (1859); *The Moravian Episcopate* (1865); *The Life and Times of David Zeisberger* (1870); *Some of the Fathers of the Moravian Church* (1881); and *The History of the Church Known as the Unitas Fratrum; or, The Unity of the Brethren, founded by the followers of John Huss* (1885). Consult his *Memoir* (Bethlehem, 1888).

SCHWEINITZ, EMIL ALEXANDER DE (1866-1904). An American bacteriologist, born at Salem, N. C. He graduated at the University of North Carolina in 1882 and at Göttingen in 1886, became connected with the chemical division of the Agricultural Department, Washington, D. C., and in 1890 was appointed director of the biochemic laboratory of the Bureau of Animal Industry of that department. He was also appointed to the chair of chemistry and toxicology in the Columbian University. He made an especial study of hygiene and of bacterial products, and published *The Poisons Produced by the Hog Cholera Germ* (1890), *The Production of Immunity to Swine Plague by Use of the Products of the Germ* (1891), *A Hygienic study of Oleomargarine* (1896), *The War with the Microbes* (1897), and other scientific treatises.

SCHWEINITZ, GEORGE EDMUND DE (1858—). An American ophthalmologist, son of the Moravian bishop, born in Philadelphia, and educated at Bethlehem Moravian College and in the University of Pennsylvania (class of 1881). He was prosector (1883-88) and lecturer on oph-

thalmology (1891-92) in the university, and professor in the Philadelphia Polyclinic and in Jefferson Medical College (1891-92). He wrote *Diseases of the Eye* (1892), and contributed to the *American System of Obstetrics* (1889), to the *Cyclopaedia of Diseases of Children* (1890), and to the *System of Therapeutics* (1892).

SCHWEINITZ, LOUIS DAVID VON (1780-1834). An American botanist, born at Bethlehem, Pa. He studied in Germany, entered the ministry of the Moravian Church, and held ecclesiastical office at Salem, N. C., and Bethlehem. By his botanical researches he added to the list of American flora more than 1400 species, of which more than 1200 were fungi. He bequeathed to the Academy of Natural Sciences of Philadelphia his herbarium, at the time of his death the largest private collection in the United States. His works include a *Conspectus Fungorum Lusatie* (1805), *Specimen Florae Americae Septentrionalis Cryptogamiae* (1821), and a *Synopsis Fungorum in America Boreali Media Degenerum* (1832). See the *Memoir*, published at Philadelphia in 1835.

SCHWEINITZ, RUDOLF (1839-96). A German sculptor, born at Charlottenburg. He studied at the Berlin Academy under Schievelbein, and after further training in Paris, Copenhagen, and Rome became his master's assistant. He worked on the exterior decoration of the National Gallery in Berlin, for which he designed the three arts for the three corners of the gables. He made the three colossal groups "Rhine," "Oder," and "Baltic," for the King's Bridge in Berlin; eight reliefs on the City Hall, Berlin, and the reliefs on the Weichsel Bridge in Thorn; "Founding of the City of Thorn;" also ten statues in Bläser's monument to Frederick William III, in Cologne. His "Cupid in Danger" (1881) is in the National Gallery, Berlin.

SCHWELM, shvélm. A town of Prussia, 23 miles east of Düsseldorf. There are iron, wire, enamel, and nickel works, with manufactures of wood screws, machinery, locks and keys, linens, and silks. Population, in 1900, 16,890.

SCHWENDENER, shvén'dé'nér, SIMON (1829—). A German botanist, born at Buchs, Switzerland, and educated at Geneva and Zurich. He became professor and director of the botanical gardens at Basel in 1867, and professor of physiological botany at Berlin in 1878. He maintained that lichens were composed of algal cells, white cellular tissue, and spongy fungus, and explained the formation and development of plants by laws of mechanics. He wrote *Ueber den Bau und das Wachstum des Flechtenthallus* (1860), *Die Algentypen der Flechtengattung* (1869), *Das mechanische Prinzip im anatomischen Bau der Munkotyleden* (1874), *Die mechanische Theorie der Blattstellungen* (1878), *Ueber das Wachsen der Pflanzen* (1881), *Zur Theorie der Blattstellungen* (1883), and *Gesammelte botanische Mittheilungen* (1898).

SCHWENINGER, shvén'ning-ér, ERNST (1850—). A German physician, born in Freistadt. He studied medicine at Munich (1866-70), was Buhl's assistant until 1875, when he became docent of pathological anatomy, and in 1879 went into private practice. His appointment to a chair in Berlin, in 1884, was largely due to his successful treatment of Bismarck for obesity. His modified Banting method is de-

of *Die Schweninger-Kur* (21st ed., 1899), his writings are *Dem Andenken B. Schwenkfelds* (1899) and *Gesammelte Arbeiten* (1899).

SCHWENKFIELD, shvénk'fèlt, KASPAR VON (1490-1561). A German religious reformer. He was born at Ossig, in Silesia, was educated at Liegnitz and Cologne, and became a councillor at the Court of the Duke of Liegnitz. He was an enthusiastic advocate of the Reformation, and it was mainly through his influence that it gained a footing in Silesia. His views differed materially from those of Luther, however, and he became separated from the other reformers and was regarded by them with suspicion and dislike. When the Lutheran principles became dominant in Silesia, Schwenkfeld voluntarily left the country in 1529 and thenceforth was driven from town to town, and finally died at Ulm. Schwenkfeld laid special stress upon the primary importance of a renewal of the inner life, to which all questions of outer concern should be subsidiary, and held that the Scriptures are dead without the indwelling word and that the organization of the Reformed Church should grow spontaneously out of the renewed inner life. The humanity of Christ he believed to be progressive through its union with the divine nature, so that it partakes more and more of that nature without losing its identity. The Lord's Supper he taught was a sacrament of spiritual nourishment without change in the elements. Although never ordained, he preached often and with great effect, and had many sympathizers. His writings were numerous, and, when the printing press was forbidden, were circulated in manuscript. His *Grosse Confession* (1549-47) contains the best presentation of his doctrine. Consult: Kadelbach, *Ausführliche Geschichte Kaspar von Schwenkfelds und der Schwenkfelder in Schlesien, der Ober-Lausitz und Amerika* (Lauban, 1860); Hoffmann, *Kaspar Schwenkfelds Leben und Lehren* (Berlin, 1897). See SCHWENKFIELDIANS.

SCHWENKFIELDIANS, or **SCHWENKFIELDERS**. The followers of Kaspar von Schwenkfeld (q.v.). Although, consistently with his principles, Schwenkfeld founded no Church, and after his death an ecclesiastical organization was out of the question for his sympathizers, owing to the conditions of the times, nevertheless they held meetings and congregations came into existence in different parts of Germany, particularly in Silesia, as well as in Switzerland and Italy. They suffered much persecution and many left their homes in consequence. In 1734 thirty-four families emigrated from Silesia to Pennsylvania and settled in Montgomery and Berks counties, and others followed two years later. A school system was established in 1764, and a denominational organization was established in 1782. In 1901 they had three districts, seven church buildings, five ministers, and about six hundred members. Their numbers have been diminished by migration to the West, where they became members of other denominations. Their Church government is congregational, the services are non-liturgical, and they sing a rich hymnody. A common benevolent fund is maintained. In addition to the more important festivals of the Christian year, they observe the anniversary of the landing of the first

company at Philadelphia (September 24th), as the *Gedächtnisstag*. They have published a number of doctrinal and institutional books. In Europe the Schwenkfeldians have become extinct. Consult the works mentioned in the notice of the founder.

SCHWERIN, shvá-rén'. The capital of the Grand Duchy of Mecklenburg-Schwerin, Germany, beautifully situated on Lake Schwerin, and several smaller lakes, about 38 miles southeast of Lübeck (Map: Prussia, D 2). The town is well built, and has handsome churches. The fourteenth-century Gothic cathedral is an interesting brick edifice, restored in 1867-69. It contains the tombs of the grand ducal family. Near the cathedral is the Grand Ducal Library of 160,000 volumes. On an island in Lake Schwerin is the beautiful grand ducal palace, an early Renaissance edifice, completed in 1857. The grand ducal museum contains a picture gallery, with noteworthy works by German, Flemish, Dutch, and Italian masters. Other interesting features are the Government offices, the arsenal, the Court theatre and the gymnasium. The principal manufactures are musical instruments (especially pianos), wagons, machinery, dyes, furniture, cabinets, and bricks. Schwerin, of Slavic origin, and the oldest town in Mecklenburg, is first mentioned in 1018, and received municipal privileges in 1161. Population, in 1890, 33,643; in 1900, 38,667.

SCHWERIN, KURT CHRISTOPH, Count (1684-1757). A Swedish soldier, born at Löwitz, Pomerania. He entered the Dutch army as ensign in 1700, fought in the War of the Spanish Succession, and in 1706 became first lieutenant in the service of the Duke of Mecklenburg. He then entered the Prussian service, and Frederick William I. sent him on several diplomatic missions. Frederick II. made him a count and field-marshal. In the first Silesian war he commanded a part of the Prussian army and won the battle of Mollwitz in 1741. He stormed Prague in the second Silesian war and was killed during the battle of Prague in the Seven Years' War. Consult Varnhagen von Ense, *Biographische Denkmale* (Leipzig, 1873).

SCHWERTE, shvér'te. A town of the Province of Westphalia, Prussia, 53 miles by rail northeast of Cologne. There is a Romanesque church with a carved altar and some good fourteenth-century stained glass. The iron works and machine shops are extensive. Population, in 1900, 12,261.

SCHWICKER, shvik'ér, JOHANN HEINRICH (1839-1902). An Austrian historian, born in New Beschenowa and educated to be a teacher. His works deal especially with the history, literature, and ethnology of Hungary, the more important titles being *Die Deutschen in Ungarn und Siebenbürgen* (1881), *Die Zigeuner in Ungarn und Siebenbürgen* (1883), *Das Königreich Ungarn* (1886), a biography of Pazmany (1888), and the valuable *Geschichte der ungarischen Litteratur* (1889).

SCHWIND, shvint, MORITZ VON (1804-71). A German historical painter and draughtsman, born in Vienna. He studied at the Vienna Academy, and under Ludwig Schnorr. At the Academy of Munich, to which he went in 1828, Cornelius exercised a powerful influence upon him. In

Munich he decorated in encaustic a room in the palace (1832-34) and painted sixty water-color designs, from the life of Charlemagne, for Hohen-schwangau Castle. After several years in Rome he was called to Karlsruhe to decorate the new Kunsthalle, and there also executed allegorical compositions for the session-room of the Upper Chamber, and in oil "Knight Kunt's Bridal Procession" (1838, Karlsruhe Gallery). In 1841 he removed to Frankfurt, where he painted for the Städel Institute "The Singers' Contest at the Wartburg" (1846), and thence went to Munich in 1847, as professor at the Academy. In the Wartburg he painted in 1853-56 frescoes illustrative of the life of Saint Elizabeth, of the history of the first landgraves, and of the Singers' Contest. In 1859 he designed thirty-four cartoons for windows in Glasgow Cathedral, and in 1861 ten for a window in Saint Michael's, London.

Schwind's works show great idyllic and poetic feeling, and it has often been remarked that his three great aquarelle cycles, "Cinderella" (1854), "The Seven Ravens" (1858, Weimar Museum), and "The Beautiful Melusina" (1870, Vienna Museum), glorify the virtues and heroism of women. Technically he was essentially 'old German,' and he ranks as a great Romanticist. Besides those already mentioned, his works in oil include "The Wedding Journey," "Count Gleichen Returning from the Crusades," and sixteen others (Schack Gallery, Munich); "Father Rhine" (Raczynski Gallery, Berlin); "The Rose" (1847, National Gallery, Berlin); and "A Symphony" after Beethoven (1849, New Pinakothek, Munich). In 1866-68 he executed a cycle in fresco from the "Magic Flute," in the Loggia, and sixteen operative scenes in tempera, in the foyer of the Opera House at Vienna. Besides some clever etchings there are unnumbered ingenious and humorous designs of all kinds to his credit. For his biography, consult Lukas von Fübrieh (Leipzig, 1871), Holland (Stuttgart, 1873), and Haack (Bielefeld, 1898).

SCHWOB, shwôb, MAYER, ANDRÉ MARCEL (1867-1905). A French author, born at Chaville. He studied at Nantes and passed his *licence es lettres* in 1888. Between 1891 and 1900 he wrote some rather unusual stories and novels, such as *Curur double*, *Le Roi au masque d'or*, *Le livre de Monelle*, *Mimis*, *La porte des rêves*. In 1894 he published a translation of Defoe's *Moll Flanders*, and in 1898, with Eugène Morand, translated Hamlet for Mlle. Sarah Bernhardt. The intention was to translate both the lines and atmosphere of the play, but the attempt was not successful. He made exhaustive studies in the life and times of Villon, gaining recognition as one of the first authorities on the subject, and in 1902 collaborated with F. Marion Crawford in a play, *Franческа di Rimini*.

SCHWYZ, shvîts. One of the forest cantons of Switzerland, separated by the Lake of Zurich on the north from the cantons of Zurich and Saint Gall, and bounded by the Canton of Glarus on the east, Uri and Lake Lucerne on the south, and Lucerne and Zug on the west (Map: Switzerland, C 1). Area, 351 square miles. Schwyz belongs wholly to the region of the Lower Alps. A central ridge having a maximum altitude of 7594 feet forms a divide between the watersheds of Lakes Lucerne and Zurich. On either side there are numerous branching spurs inclosing the

valley of the Sihl on the north and that of the Moota on the south. From the latter rise the outliers of the Urner and Glarner Alps.

Schwyz is essentially a pastoral region; stock-raising is the principal occupation. The supply of cereals is far below the domestic demand, and viticulture is on a limited scale. The forests cover nearly one-fourth of the area. Marble and gypsum are found. The principal manufacturing industry is cotton-spinning. Silk-weaving is developed to some extent as a house industry. The economic life of the canton is aided by the heavy annual pilgrimage to Einsiedeln (q.v.).

The legislative assembly (Grosser Rat) is elected for four years at the rate of one member to every 600 inhabitants. The executive council consists of 7 members elected by the people for four years. Proportional representation for election to the legislature prevails in all communities entitled to 3 or more members. The obligatory referendum and the initiative are in force. Population, in 1900, 55,385, almost entirely Roman Catholic. German is mostly spoken.

Schwyz, which gives its name to Switzerland, was in early mediæval times a free community tenacious of its rights, and frequently embroiled over pastoral privileges with the powerful Abbey of Einsiedeln, which eventually came under its protection. With Uri and Unterwalden it formed in 1291 the celebrated league of resistance against Austria, and defeated the Austrian forces at Morgarten Pass in 1315 and at Sempach in 1386. The second victory insured the independence of the Schwyzers and they subsequently extended the authority of the "Landsgemeinde" over a considerable territory. They strenuously opposed the Reformation as members of the league formed to inaugurate the Counter-Reformation. In 1798 they spiritedly resisted the French, but suffered severely during the French campaign against the Russians in Switzerland in 1799. Schwyz remained staunchly conservative against constitutional changes and became a member of the Sonderbund, sharing in the defeat of the Catholic cantons in the war of 1847, which was followed by a revision of the Constitution.

SCHWYZ. The capital of the Canton of Schwyz, in Switzerland, situated in a deep basin formed by the Myten, the Rigi, and the From alps, about 10 miles southwest of Einsiedeln (Map: Switzerland, C 1). Its town hall, embellished with frescoes and portraits, and the parish church possess interest. Population, in 1900, 7398.

SCHYNSE, shin'se, AUGUST (1857-91). A German Catholic missionary and African explorer, born at Wallhausen and educated at Bonn. He attended the seminary at Speyer, became a priest in 1880, and in 1882 entered the service of the African Mission and was active in the work in Algeria. After his return to Europe he taught at the mission houses of Lille and Brussels. He was one of a mission expedition to the Congo in 1855. This trip he described in his diary, *Zwei Jahre am Kongo* (1889). In 1888 he made a trip to East Africa and from there accompanied Stanley and Emin Pasha to the coast. With Emin he went to the Victoria Nyanza and then spent almost a year in explorations between that lake and Uganda. He wrote *Mit Stanley und Emin Pascha durch Deutsch Ost-Afrika* (1890). Consult: Hespers,

of the *Repubblica* (1812), and of the *Giornale di Lettere e Scienze* (*Il Pensiero*) at Salerno (1814).

SCIACCA, sh'akka. A seaport in the Province of Cagente, Sicily, 45 miles south southwest of Palermo (Map; Italy, II 10). It has an eleventh-century cathedral, ruins of castles, a technical school, and a library. There are potatoes, anchovy fishing, and a trade in grain and oil. Scacca was an important city in the Middle Ages. Population (commune), in 1881, 22,195; in 1901, 20,090.

SCIÆNIDÆ, s'ien'idæ (Neo-Lat. noun, pl. from Lat. *sciatia*, from Gk. *σκιαινα*, *skiaina*, sort of sea fish, maigre, from *σκιά*, *skia*, Skt. *chāpā* shadow). A large and important family of spiny rayed fishes, the gunthers, with considerable resemblance to the perch, having a compressed body. The scales are ctenoid and arranged in oblique rows. The family includes the weakfish, drums, croakers, etc. There are 30 genera and about 150 species, found in all warm seas, but never in deep water. A few species are restricted to fresh waters. Many grow to a large size. Most of them are valued as food fishes and some are interesting game fishes.

SCIALOIA, she-à-l'ya, ANTONIO (1817-77). An Italian economist and patriot, born at San Giovanni del Teduccio, in Campania. Educated for the law, he published in 1840 *I principi dell'economia sociale*, a book which at once put the young writer into the notice of European economists. As a consequence he was professor of political economy at the University of Turin. He became actively interested in the movements which resulted in the unification of Italy. He was called into the Treasury by Cavour, entered the Lower House of Parliament, and later became Senator. He held the portfolio of Finance from 1865 to 1867, at the most trying epoch of Italian affairs. Among his economic and legal works may be mentioned, in addition to the *Principi* already named, *Sulla proprietà dei prodotti d'impegno* (1843), *Industria e produzione* (1843), *I bilanci di Napoli e degli stati sardi*, and *Carestia e governo* (published in Turin from 1854 to 1860).

SCIATICA (ML., from *sciaticus*, from Lat. *ischiadicus*, from Gk. *ισχιαδικός*, *ischiadikos*, subject to pains in the loins, from *ischias*, *ischias*, pain in the loins, from *ischion*, *ischion*, socket of the thigh joint). A neuralgia of the great sciatic nerve. (See NERVOUS SYSTEM AND BRAIN.) It occurs in persons of a gouty or rheumatic tendency and is brought on by exposure, muscular strain from hard labor, pressure from hard seats, and constipation. As a symptomatic affection it may be caused by the pressure of pelvic tumors, injury to the nerves, inflammations, and spinal disease. It also occurs occasionally in phthisis and diabetes. Sciatica is characterized by irregular pains about the hip, especially between the great trochanter of the thigh bone and the bony process on which the body rests when sitting (tuberosity of the ischium), spreading into the neighboring parts and running down the back of the thigh into the leg and foot. The pain is almost continuous, with paroxysms of great severity in which the pain is sharp, burning, and stabbing in character. The disease is very obstinate and tends to become chronic. In treatment a most important indication is rest, which is sometimes made more com-

plete by the application of a splint to the limb. The medicinal treatment depends upon the underlying constitutional condition, with morphine, antipyrine, and like drugs to relieve pain. When the disease becomes chronic the galvanic electric current is indicated. Wet cupping is often useful.

SCIICLI, sh'ikle. A town in the Province of Syracuse, Sicily, 38 miles southwest of Syracuse (Map; Italy, J 11). Population (commune), in 1901, 16,277.

SCIDMORE, ELIZA RICHMAN (1856—). An American traveler and author. She was born at Madison, Wis., received an academic education, became widely known as a traveler and as a writer of books of travel, and was made corresponding secretary of the National Geographic Society. Her published works include: *Alaska, the Southern Coast and the Sitkan Archipelago* (1885); *Jinrikisha Days in Japan* (1890); *Westward to the Far East* (1890); *Jara, the Garden of the East* (1897); and *China, the Long-Lived Empire* (1900).

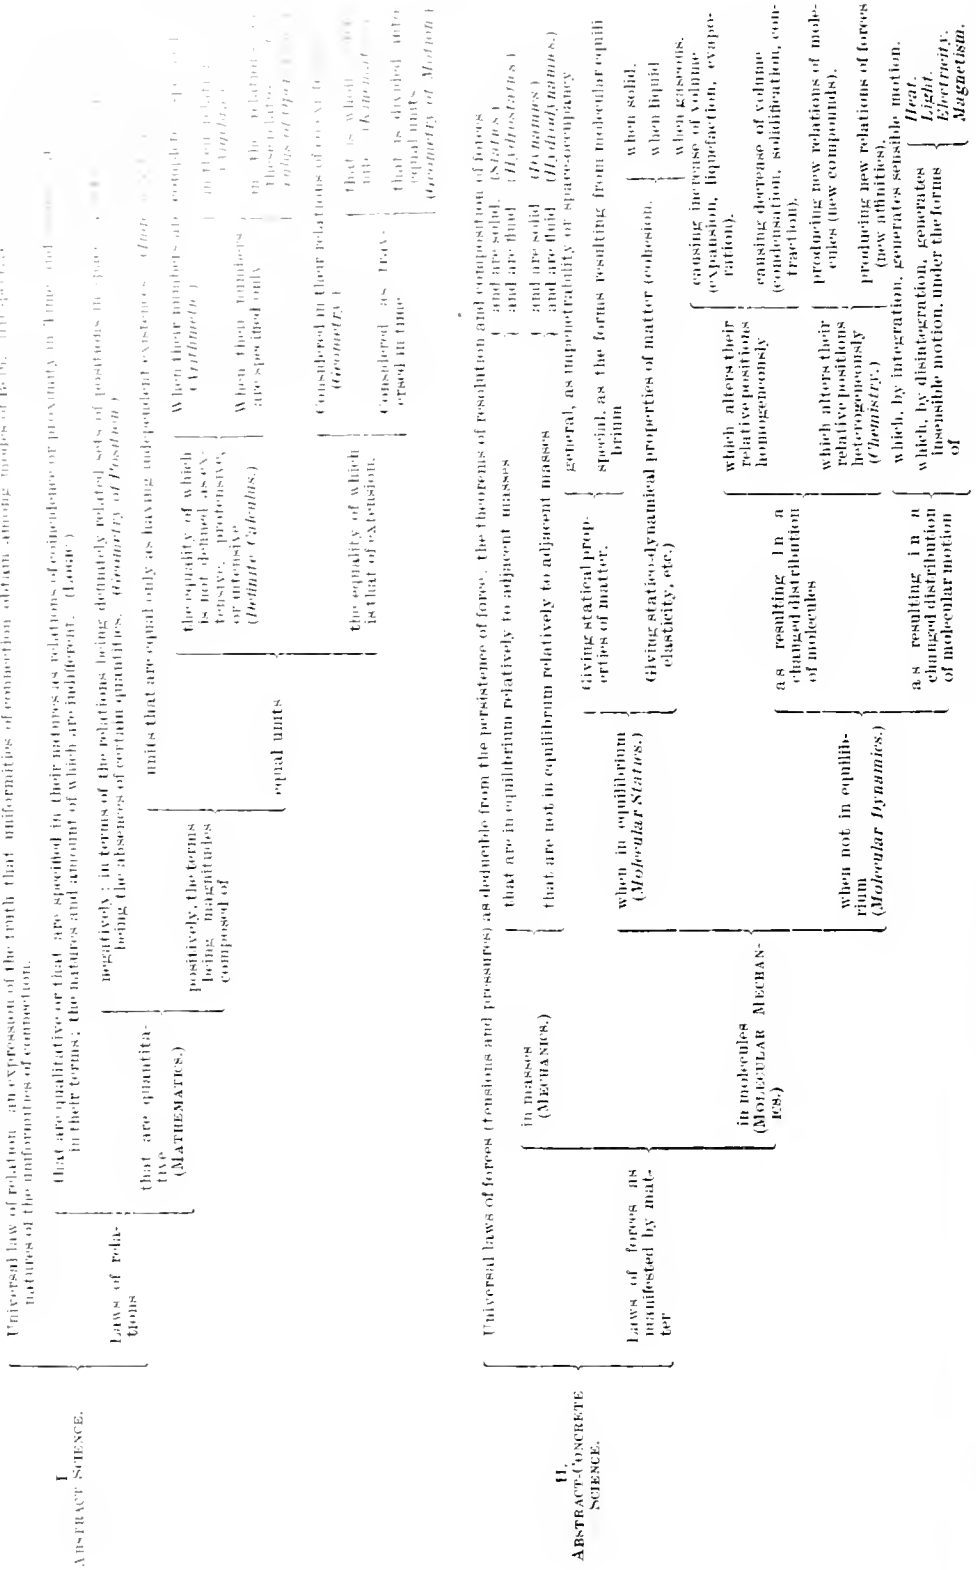

SCIENCE, SOCIAL. See SOCIOLOGY.

SCIENCES (Lat. *scientia*, knowledge, from *scire*, to know). CLASSIFICATION OF. From early times attempts have been made to arrange all the sciences in a systematic order which shall clearly show their relations to each other. The result of such an attempt depends, of course, partly upon the material to be classified, and partly upon the principle used in classification, i.e. the *fundamentum divisionis* (see DIVISION); it is also apt to be influenced by the partiality of the classifier in favor of some discipline which he wishes to place above all others.

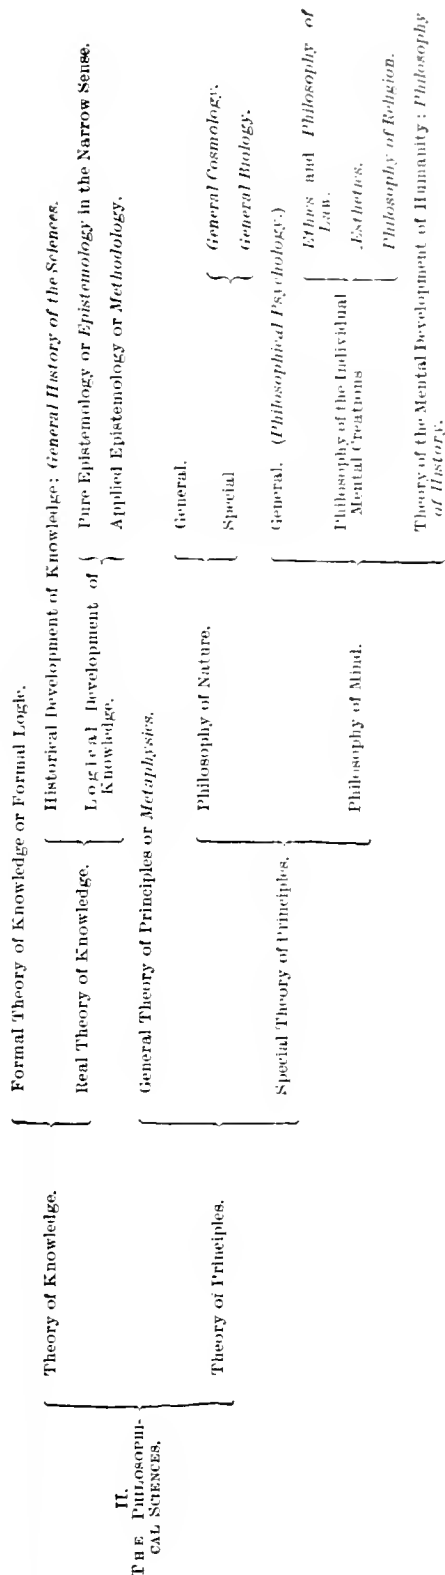

In ancient Greece there were relatively few sciences, and the classification of such as existed was a comparatively easy matter. And yet even then there was disagreement among classifiers, due in great measure to differences in philosophical conceptions. The Platonists divided the sciences into dialectics, physics, and ethics. Aristotle divided them into the theoretical, the practical, and the poetical (creative or technical). Interpreters are not agreed upon what he accepted definitively as the sub-classes of the theoretical sciences. Some maintain that these sub-classes are analytics (logic), metaphysics, and physics. Others say that he regarded logic merely as propædeutic to the sciences, and that the theoretical sciences were divided into mathematics, physics, and the 'first philosophy' (metaphysics). The practical sciences included ethics and politics, although Aristotle seemed at times to regard ethics merely as a branch of politics. The technical sciences were of two kinds, the useful and the imitative.

In modern times Bacon (1605) uses as principle of division the so-called faculties of the mind, some one of which was by him supposed to be predominantly active in each of the several sciences. These faculties were memory, imagination, and reason, and they gave rise respectively to history, poesy, and philosophy. "History is natural, civil, ecclesiastical, and literary; whereof the first three I allow as extant, the fourth I note as deficient." These are again subdivided. Poesy is divided into "poesy narrative, representative, and allusive." "In philosophy, the contemplations of man do either penetrate unto God, or are circumferred to Nature, or are reflected or reverted upon himself. Out of which

SPENCER'S CLASSIFICATION OF THE SCIENCES (I)

WUNDT'S CLASSIFICATION OF THE SCIENCES (II.)

and most scientific men would reckon them as more. Six objects admit of 720 different dispositions. . . . Our problem is, then, to find the rational order, among a host of possible systems." "The true order is determined by the degree of simplicity, or, what comes to the same thing, of generality," of the phenomena which are the objects of scientific investigation. This order turns out to be mathematics, astronomy, physics, chemistry, physiology, and social physics, for the last of which Comte invented the now current name, 'sociology.' The correctness of this order, he argues, is confirmed in various ways. For instance, in education, this is the order in which the sciences must be studied. An astronomer must have learned his mathematics. "Physical philosophers cannot understand physics without at least a general knowledge of astronomy; nor chemists without physics and astronomy; nor physiologists without chemistry, physics, and astronomy; nor, above all, the students of social philosophy, without a general knowledge of all the anterior sciences. As such conditions are, as yet, rarely fulfilled, and as no organizations exist for their fulfillment, there is among us, in fact, no rational scientific education."

Herbert Spencer in 1854 suggested a classification of the sciences which he worked out in detail ten years later, and which has become famous. He begins by criticising Comte's scheme on account of the identification the latter made of the abstract and the general. "Abstractness," he insists, "means detachment from the incidents of particular cases. Generality means manifestation in numerous cases." Not degree of generality—as by Comte—but of abstractness is by Spencer regarded as the proper basis for division of the sciences. Applying this principle of division, he obtains three classes of sciences, the abstract, the abstract-concrete, and the concrete sciences. The various subdivisions of these classes are shown in the accompanying table.

One of the most carefully worked out classifications ever published is Wundt's (1889). He objects to most previous classifications because they attempt to force some arbitrary schematism upon the facts. One must find the scheme in the facts themselves, he argues, and these facts are not the object-matter of the sciences, but the points of view which the various sciences take of their object-matter. The point of view of a science is a conceptual point of view. It is taken in order that from this vantage ground we may survey the facts and bring them into intelligible relations. This point of view determines the method pursued by any science. As sciences are distinguished by their conceptual points of view, Wundt classifies them according to these points of view. The first division, according to this principle, is into the special sciences and philosophy. The special sciences deal with facts from some single point of view; philosophy takes a more comprehensive survey of our knowledge of these same facts. "While the special sciences divide knowledge into a great number of objects of knowledge, the eye of philosophy is from the start directed toward the organic unity (*Zusammenhang*) of all these objects of knowledge." The various subdivisions of the special sciences and of philosophy, as worked out by Wundt, are to be found in the accompanying table.

of science, those the question of classification is possible. The possibility of the exclusion of some sciences, as observed at the outset, a *tabula rasa*, among other things, upon which a classification is employed. Is only one principle possible in the classification of the sciences? The answer to this question affirmatively seems to be negative. The various sciences are related in various ways, and why any single one of these should be chosen as the sole possible basis of a classification, it is difficult to see. The dogmatism of such an assumption can be illustrated by referring to the classification of books in a library. A library may be arranged alphabetically, or chronologically, or topically, etc. No one of these arrangements is the only proper one. Which shall be chosen depends upon the use to which the classification is to be put.

Consult Ueberweg-Heinze, *Grundriss der Geschichte der Philosophie*, for ancient classifications; for several modern classifications, consult: Bacon, *Advancement of Learning* (1605); Hobbes, *Leviathan* (1651); Locke, *Essay Concerning Human Understanding* (1690); d'Alembert, *Mélanges* (1767); Bentham, *Chrestomathia* (1816); Comte, *Cours de philosophie positive* (1830); Ampère, *Essai sur la philosophie des sciences* (1834); Spencer, *The Genesis of Science* (1854) and *The Classification of the Sciences* (1864), both republished in vol. ii. of his *Essays* (American ed. 1891); Erdmann, "Die Gliederung der Wissenschaften," in *Vierteljahrsschrift für wissenschaftliche Philosophie*, vol. ii.; Wundt, "Ueber die Eintheilung der Wissenschaften," in *Philosophische Studien*, vol. v.; also his *Logik* (2d ed., Leipzig, 1893-95); La Grasserie, *De la classification* (Paris, 1893); Goldot, *Essai sur la classification des sciences* (ib., 1898); Naville, *Nouvelle classification des sciences* (ib., 1901).

SCIENTIFIC ALLIANCE OF NEW YORK, THE. An association of scientific bodies with headquarters at the New York Botanical Gardens and including the resident active members of the New York Academy of Sciences, the Torrey Botanical Club, the New York Microscopical Society, the Linnean Society of New York, the New York Mineralogical Club, and the New York Entomological Society. The Council of the Scientific Alliance is composed of the president and two members from each of the allied societies. In 1902 the Alliance had a total membership of 691. See ENTOMOLOGICAL SOCIETY, AMERICAN; MICROSCOPICAL SOCIETY, THE AMERICAN; NEW YORK ACADEMY OF SCIENCE; TORREY BOTANICAL CLUB.

SCILLA. See SQUILL.

SCILLY (SIL'Y) ISLANDS. A group of islands forming the southwesternmost part of Great Britain, 27 miles west-southwest of Land's End, Cornwall (Map: France, A 2). The group consists of about 140 islands and rocks, comprising a circuit of 30 miles, and the islands are the high points of the submerged and traditional land of Lyonesse which extended to the mainland. Navigation around the islands is dangerous. Only five of them are inhabited. Saint Mary's, the largest, has 1528 acres; Tresco, 697; Saint Martin's, 515; Saint Agnes, 313; Sampson and Byles, 299. The climate is mild. The soil is in general sandy, but in Tresco and Saint Agnes it is remarkably fertile. The cliffs abound with

sea-fowl, and are covered with samphire. The inhabitants are chiefly engaged in agriculture, floriculture, and fishing. Large quantities of potatoes are produced; narcissi and other flowers are sent to London and Bristol.

Hugh Town is the capital, and contains an odd mixture of old-fashioned and neat modern houses.

By the ancients, these islands were named Cassiterides, Hesperides, and Silura Insulae. The term Cassiterides, or 'Tin Islands,' by which they were known to the Greeks and Romans, was once applied to the peninsula of Cornwall.

There are numerous remains of prehistoric monoliths, stone circles, kistvaens, rock-basins, and cromlechs. The Scilly Islands were in 936 granted by Athelstane to some monks who settled at Tresco. They were afterwards granted to the Abbey of Tavistock by Henry I., and were conferred by Queen Elizabeth on the Godolphin family. They are now Crown property. Population, in 1901, 2100.

SCINDE, *sind*. A region of British India. See SINDH.

SCINDIA, or **SIDHIA**, *sin'di-ä*. The name of a Mahratta dynasty, rulers of Gwalior, in Central India. See SINDIA.

SCINTILLATION (Lat. *scintillatio*, from *scintillare*, to sparkle, from *scintilla*, spark). The apparent twinkling or flickering of a star, including the changes of color that are seen when the stars are near the horizon. A perfectly satisfactory explanation of this phenomenon has been given by Exner of Vienna, who shows that it is due entirely to the irregular refraction of rays of light passing through the heterogeneous mixture of warm and cold air that ordinarily exists in the atmosphere. The minute streams of warm and cold air, oftentimes of a smaller diameter than that of the pupil of the eye, cause points on a large object to dance about while the object as a whole remains stationary. Therefore the edges of the sun or moon or planets appear to scintillate, while these objects as a whole are quite steady owing to their large apparent angular diameter. The frequency and extent of the oscillations and changes of color may be observed by means of the scintillometer, by which the image of a star is drawn out into a circle, and the rapid changes of the light are seen distributed along the circumference. Regular observations have shown that scintillation is more decided before the approach of a storm, and in various ways this phenomenon is so connected with atmospheric changes as to form a regular subject of observation by some meteorologists.

SCIO. An island of the Ægean Sea. See CHIOS.

SCIOPIUS (Latinized form of *Schoppe*), KASPAR (1576-1649). A classical scholar and controversialist, born at Neumarkt, in the Palatinate. He studied at Heidelberg, Altdorf, and Ingolstadt. In 1598 he became a Roman Catholic. Henceforth his career is a series of attacks both on Protestantism and on his personal enemies. He assailed first Joseph Justus Scaliger (q.v.), against whom, in 1607, he wrote his *Scaliger Hypobolimus*. In 1611 he attacked King James of England in libelous pamphlets. Some three years after, when staying at Madrid, he was in retaliation beaten by the servants of Lord Digby, the

English Ambassador. Sciofpius fled from Spain to Ingolstadt, where he issued his *Legatus Latino* against the Ambassador. Among his numerous works the most important are: *Poemata Varia* (1593); *De Arte Critica* (1597); *Symbola Critica in Apulii Opera* (1605); *De Rhetoricarum Exercitationum Generibus* (1628); *Grammatica Philosophica, sive Institutiones Grammaticae Latinae* (1628); *Rudimenta Grammaticae Philosophica* (1629); *De Studiorum Ratione* (1636); and editions of Varro's *De Lingua Latina* (1605) and the *Epistles* of Symmachus (1608).

SCIOTO, sí-ó'tó. A river of Ohio. It rises in Anglaize County, flows south through a fertile and populous valley in the centre of the State past the city of Columbus, and joins the Ohio River at Portsmouth after a course of 200 miles (Map: Ohio, E 7). It is navigable 130 miles at high water, and its course is followed for 90 miles by the Ohio and Erie Canal.

SCIPIO, sí-pí-ó. The name of a distinguished Roman patrician family of the Cornelia gens. PUBLIUS CORNELIUS SCIPIO, surnamed AFRICANUS MAJOR, one of the most accomplished warriors of ancient Rome, was born B.C. 237, not in 234, as Livy says. He is first mentioned as taking part in the battle of the Ticinus (B.C. 218), where he saved his father's life. Two years later he fought at Cannæ as a military tribune, but was one of the few Roman officers who escaped from that disastrous field. In B.C. 212 he was elected ædile, though not legally qualified by age, and in the following year proconsul, with command of the Roman forces in Spain. His appearance there restored fortune to the Roman arms. By a bold and sudden march he captured Nova Carthago, the stronghold of the Carthaginians, and obtained an immense booty. At Bœcula, in the valley of the Guadalquivir, he defeated Hasdrubal with heavy loss, but could not prevent him from crossing the Pyrenees and marching to the assistance of Hannibal. In B.C. 207 he won a more decisive victory over the other Hasdrubal, son of Gisco, and Mago, at an unknown place called Silpa, or Elinga, in Andalusia—the effect of which was to place the whole of Spain in the hands of the Romans. Soon after he returned to Rome, where he was elected consul (B.C. 205), though he had not yet filled the office of prætor; and in the following year he sailed from Lilybæum, in Sicily, at the head of a large army, for the invasion of Africa. His successes compelled the Carthaginian Senate to recall Hannibal from Italy. This was the very thing that Scipio desired and had labored to achieve. The great struggle between Rome and Carthage was terminated by the battle fought at Naragra, on the Bagradas, near Zama, October 19, B.C. 202, in which the Carthaginian troops were routed with immense slaughter. Hannibal advised his countrymen to abandon what had now become a hopeless and ruinous contest, and peace was concluded in the following year, when Scipio returned to Rome and enjoyed a triumph. The surname of Africanus was conferred on him, and so extravagant was the popular gratitude that it was proposed to make him consul and dictator for life, honors which Scipio was either wise enough or magnanimous enough to refuse. When his brother Lucius, in 190, obtained command of the army destined to invade the territories of

Antiochus, King of Syria, Scipio served under him as legate. Lucius was victorious in the war, and on his return to Rome (B.C. 189) assumed (in imitation of his brother) the surname of Asiaticus. But the clouds were now gathering heavily round the Scipios. In B.C. 187 Cato Major and others induced two tribunes to prosecute Lucius for allowing himself to be bribed by Antiochus in the late war. He was declared guilty by the Senate, his property was confiscated, and he himself would have been thrown into prison had not his brother forcibly rescued him from the hands of the officers of justice. In B.C. 185 Scipio himself was accused by the tribune, M. Nevius; but instead of refuting the charges brought against him (which were probably groundless), he delivered, on the first day of his trial, a eulogy on his own achievements, and opened the second day by reminding the citizens that it was the anniversary of the battle of Zama, and therefore not a time for angry squabbling, but for religious services. He then summoned the people to follow him to the Capitol to give thanks to the immortal gods and to pray that Rome might never want citizens like himself. His audience were electrified, and the thing was done before opposition became possible. To resume the trial was out of the question; but Scipio felt that popular enthusiasm was not to be depended on and that his day was over. He retired to his country-seat at Liternum, in Campania, where he died, B.C. 183 or 185. Scipio is commonly regarded as the greatest Roman general before Julius Cæsar.

PUBLIUS CORNELIUS SCIPIO ÆMIANUS, surnamed AFRICANUS MINOR, born about B.C. 185, was a younger son of Lucius Æmilius Paulus, who conquered Macedon, but was adopted by his kinsman, Publius Scipio, son of Scipio Africanus Major, who had married the daughter of that Lucius Æmilius Paulus who fell at Cannæ. Scipio accompanied his father on his expedition against Macedon, and fought at the decisive battle of Pydna, B.C. 168. In B.C. 151 he went to Spain as military tribune, in the train of the Consul Lucius Lucullus, and distinguished himself alike by his valor and his virtue. Two years later began the Third Punic War, which mainly consisted in the siege of Carthage. Scipio still held the subordinate position of military tribune; but the incapacity of the consuls, Manius Manilius and Lucius Calpurnius Piso, and the brilliant manner in which he rectified their blunders, fixed all eyes upon him. The favorite both of the Roman army and the Roman people, Scipio was at length, in B.C. 147, when only a candidate for the ædileship, elected consul by an extraordinary decree of the Comitia, and invested with supreme command. After a protracted defense Carthage was finally taken by storm in the spring of B.C. 146; and by the orders of the Senate it was leveled to the ground. Scipio, though probably the most accomplished Roman gentleman of his age, was rigorous in his observance of the antique Roman virtues; and when holding the office of censor in B.C. 142 he strove to follow in the footsteps of Cato. But his efforts to repress the increasing luxury and immorality of the capital were frustrated by the opposition of his colleague, Lucius Mummius, the rough conqueror of Corinth. In B.C. 139 Scipio was accused of the *crimen majestatis* by the tribune Tiberius Claudius Asellus, but was acquitted, and soon after was

of the Emperor's Asia on a special embassy. His political, however, affairs had gone badly in Spain. Arrabans, the Lusitanian patriot, had again and again inflicted the most disgraceful defeats on the Roman armies, and his example had roused the hopes of the Celtiberian tribes. He also rushed to war against the common foe. The contest continued with varying success; but the interest centred in the city of Numantia, whose inhabitants displayed amazing courage in the struggle with Rome. For long it seemed as if the Numantines were invincible, one consul after another finding their subjugation too hard a task; but at length, in B.C. 134, Scipio, re-elected consul, was sent over to Spain, and after a siege of eight months forced the citizens, who were dying of hunger, to surrender, and utterly destroyed their homes. He then returned to Rome, where he took a prominent part in political affairs, appearing as the leader of the aristocratic party, in consequence of which his popularity with the democratic party greatly declined. Although a brother-in-law of Tiberius Gracchus, whose sister, Sempronia, he had married, he disclaimed any sympathy with his political aims, and when he heard of the murder of his kinsman, quoted his favorite Homer: "So perish all who do the like again." His attempts (B.C. 129) to rescind that portion of the agrarian law of Tiberius Gracchus relating to the lands of the allies excited furious indignation. When he went home from the Senate he had to be accompanied by a guard. Next morning he was found dead in his bed, the prevailing suspicion being that he was murdered either by or at the instigation of Papius Carbo, his most rancorous political enemy. Scipio was neither a rigid aristocrat nor a flatterer of the people. Interior in splendor of genius to his adoptive grandfather, he surpassed him in purity of character, in simplicity of patriotism, and in liberality of culture.

QUINTUS CECILIUS METELLUS PIUS, a son of P. Cornelius Scipio Nasica, but adopted by Quintus Cecilius Metellus Pius; sometimes called Publius Scipio Nasica and sometimes Quintus Metellus Scipio. He is first mentioned in history in B.C. 63, when he divulged to Cicero the conspiracy of Catiline. He was elected tribune in 60, when he was accused of bribery by the disappointed candidate, and defended by Cicero. In 53 he offered himself for the consulship, but the rivalry between the candidates and their factions led to such violence and bloodshed that no election was held. Then followed the murder of Clodius (q.v.), and during the ensuing anarchy Pompeius was made consul without a colleague. Soon after he married Scipio's daughter, Cornelia, and made Scipio his fellow-consul. Thenceforth all of Scipio's efforts were directed toward the aggrandizement of Pompeius and the overthrow of Caesar's power. At the expiration of his term of office he went as proconsul to Syria, where his rule was complained of as oppressive. He served with Pompeius in Greece, and after the battle of Pharsalia fled to Africa, where the remnants of the Pompeian forces had the support of King Juba (q.v.). Scipio held the chief command, but was defeated by Caesar in the battle of Thapsus (B.C. 46) and committed suicide.

SCIPIOS, TOMB OF THE. The famous tomb on the Appian Way in Rome, which once contained the sarcophagus of Scipio Barbatus (con-

sul B.C. 298), now in the Vatican, and those of later Scipios. It was discovered in 1780, when it was rifled and defaced.

SCIRE FACIAS, sī'rō fā'shī-as (Lat., that you make known). A writ commanding the defendant to appear in court and show cause, if possible why some matter of record should not be enforced, vacated, or modified. The hearing or trial under this writ is usually called a *scire facias* proceeding. *Scire facias* is employed for many purposes, and in general is merely supplemental to or a continuation of former proceedings, as to revive or continue the lien of a judgment; but in some cases it is practically an original action. A writ of *scire facias* must be founded upon some public record, either judicial or otherwise. The defendant may demur, plead, or answer, or make a motion to quash the writ. Substantially the same defenses are allowed as in an ordinary action (q.v.), except that where the *scire facias* proceedings are merely a continuation of a former action the defendant cannot introduce any defense which would have been available in the latter. A judgment may be entered upon the determination of the proceeding, and from this an appeal will lie. *Scire facias* proceedings were practically rendered unnecessary and obsolete in England by the Judicature Acts (q.v.), although not expressly abolished. In many of the United States other actions or proceedings have been substituted by practice acts and codes, and proceedings by the writ of *scire facias* abolished. Consult Foster's *Scire Facias* (Philadelphia, 1851) and the authorities referred to under WRIT.

SCIRPUS (Lat., rush, bulrush). A genus of about 200 species of plants of the natural order Cyperaceæ, sometimes called club-rush, some of them very small in comparison with the bulrush (*Scirpus lacustris*). Deer's hair (*Scirpus capitosus*) is only 2 or 3 inches high. The root-stocks or tubers of certain species are eaten by the natives of Southern India. Several of the larger growing species are used for making mats, others check the drifting of sand upon beaches. See BULRUSH.

SCIRRHUS. See TUMOR.

SCISSORBILL. A bird, the skimmer (q.v.).

SCISSORS and SHEARS. See CUTLERY.

SCISSOR-TAILED FLYCATCHER. A beautiful flycatcher (*Mitralus forficatus*) of the Southwestern United States, remarkable for its long outer dark-tipped tail feathers, which in flight open and shut like a pair of scissors. The body is about 3½ inches long; the tail about 9½ inches. The general color is light bluish gray, the back and wing-linings reddish, the lower parts white, washed along the flanks with salmon-pink. Females are paler than males. The nest is composed of sticks, lined with feathers and soft materials; and the eggs are salmon-brown with darker, curiously scratched markings. A tropical relative of this exquisite and active bird is the fork-tailed flycatcher (*Mitralus tyrannus*), whose tail feathers are black. See PLATES OF FLYCATCHERS and EGGS OF SONG BIRDS.

SCLATER, PHILIP LUTLEY (1829—). An English zoologist. He studied at Corpus Christi College, Oxford, was admitted a barrister of Lincoln's Inn, and in 1859 became secretary of the Zoological Society of London, and in 1860 editor

of *The Ibis*, a quarterly journal of ornithology. His writings include about twelve hundred memoirs on zoological topics, and several extended works, such as the *Monograph of the Jacmors and Puff-Birds* (1882).

SCLEROSIS (Neo-Lat., from Gk. σκλήρωσις, *sklērosīs*, induration, from σκλήρως, *sklēros*, hard). A hardening, resulting from degenerative changes in which normal tissues are replaced by connective tissue, as in a scar; an induration. The hardening of the middle coat of an artery is termed arterio-sclerosis (q.v.). Replacing of the normal tissue of the liver by contractile connective tissue is termed cirrhosis of the liver (q.v.). Degeneration and destruction of the tissue of the spinal cord, or of the brain, is termed sclerosis, which in these cases is a fibroid and neuroglia induration.

SCLEROSTOMA (Neo-Lat., from Gk. σκλήρως, *sklēros*, hard + στόμα, *stoma*, mouth). A well-known genus of roundworms. One species (*Sclerostoma synygamus*) is of special interest, as being the cause of the disease in poultry known as the gapes (q.v.). Another important species is *Sclerostoma duodenale*. This worm, which usually measures about one-third of an inch in length, is especially characterized by an asymmetrical disposition of four horny, conical, oval papillae, of unequal size, forming the so-called teeth. This worm is tolerably common throughout Northern Italy. It also occurs in India, Brazil, the Antilles, Switzerland, and Belgium, and is the cause of the disease called miner's anaemia. It is remarkably abundant in Egypt, where, it is said, about one-fourth of the population are constantly suffering from a severe anæmic chlorosis, occasioned solely by the presence of this parasite.

SCLEROTICA. See EYE.

SCLOPIS DI SALERANO, sklō'pis dē sā'lā-rā'nō, FEDERICO, Count (1798-1878). An Italian jurist and statesman. He was born in Turin and was educated at the University of Turin. He entered the service of the Sardinian Government in the Department of the Interior, rose to be a member of the Supreme Court, and in March, 1848, became Minister of Justice in the Balbo Cabinet, going out of office, however, in July. In 1849 he became a member of the Senate, over which he presided from 1861 to 1864. In the latter year he was admitted to the Academy of Turin. He was nominated by the King of Italy to the Geneva tribunal for the arbitration of the Alabama Claims (q.v.) and was president of the court. He was the author of *Storia dell' antica legislazione del Piemonte* (1833); *Storia della legislazione italiana* (1840-57); *Sull' autorità giudiziaria* (1842); *Le relazioni politiche tra la dinastia di Savoia ed il governo britannico dal 1270 al 1815* (1853).

SCO'GAN, HENRY (c.1361-1407). The reputed author of a collection of jests compiled in the sixteenth century. He is said to have been a fool at the Court of Henry IV. Though the collection was made as early as 1565, the earliest extant edition bears the date 1626. The title runs *The First and Best Parts of Scaggins Jestes. Full of Witty Mirth and Pleasant Shifts, done by him in France and other places; being a Preservative against Melancholy. Gathered by Andrew Boord, Doctor of Physicke.* Andrew Boorde (q.v.), the reputed collector, was a famous sixteenth-century

wit, who satirized the fantastic dress of the time by a woodcut of a naked Englishman standing with a pair of shears in one hand and a piece of cloth over the other arm, uncertain what style to wear. He probably had nothing to do with the compilation of the so-called Scogan jests, which was made by some unknown hand from various sources for the bookseller. Similar collections bear the name of John Skelton (q.v.) and of Joseph Miller (q.v.). Consult *Old English Jest Books*, ed. by Hazlitt (vol. ii., London, 1864); and see *ILLUSTR.*

SCOLECIDA (Neo-Lat., nom. pl., from Gk. σκώληξ, *skōlēx*, worm). A name, now obsolete, of a group of Annuloida or Vermes, comprising the Entozoa of Cuvier and also the free Turbellaria.

SCOL'LARD, CLINTON (1860—). An American poet and educator. He was born at Clinton, Oneida County, New York. He graduated from Hamilton College in 1881, and pursued graduate study at Harvard University and in Cambridge, England. He was assistant professor of rhetoric at Hamilton College from 1888 to 1893, and from then till 1896 of English literature. He published several volumes of poems, both light and serious. They are: *Pictures in Song* (1884); *With Rod and Lyre* (1886); *Old and New World Lyrics* (1888); *Gloria and Giulia, a Metrical Romance* (1892); *Songs of Svanise Lands* (1892); *The Hills of Song* (1895); *Skvanda* (1896); *A Boy's Book of Rhyme* (1896). He has also produced two volumes of prose: *Under Summer Skies* (1892) and *On Sunny Shores* (1893).

SCOMBRIDÆ (Neo-Lat., nom. pl., from Lat. *scomber*, from Gk. σκῆμβρος, *skombros*, mackerel). A large and important family of spiny-rayed fishes, including mackerels, tunnies, and bonitos. Some species grow to a very large size—1,500 pounds. They are migratory, traveling in schools, often in great numbers. The family contains about 60 species, most of which are excellent food-fishes, and some have a great economic value. See MACKEREL; FISHERIES.

SCONE, skōn. A parish in Perthshire, Scotland, on the Tay, 2 miles from Perth (Map; Scotland, E 3). Population, in 1901, 2,362. It is first mentioned in the beginning of the tenth century as the royal city, when a council was held there in the reign of King Constantine II. A monastery was built at Scone about the same period, and there was located the famous stone on which the kings of the Scots were inaugurated, and which was carried by Edward I. of England to Westminster Abbey. An abbey was founded by Alexander I. in 1115, in which the sovereigns continued to be inaugurated and crowned. The last coronation celebrated at Scone was that of Charles II. on January 1, 1651. The viscounts of Stormont had a residence here known as the Palace of Scone. The present palace, belonging to the Earl of Mansfield, was erected on the same site after 1800.

SCO'PAS (Lat., from Gk. Σκόπας, *Skopas*). A famous Greek sculptor, born at Paros and active during the first half of the fourth century B.C. He is called the architect of the new Temple of Athena Alca at Tegea, which replaced a temple burned in B.C. 395-94, and he was one of the sculptors of the Mausoleum (q.v.) completed about B.C. 350. Until recently the works of Scopas were known only through literary ref-

SCOPAS

SCOPAS. BUST OF A MAN WITH CURLY HAIR.

SCOPAS. SEATED MAN.

paratively easy to proceed from this point to the reading of complicated scores. No one should attempt playing from score who has not a thorough knowledge of harmony as well as a fair knowledge of counterpoint. In reading a large score it is impossible to look at every individual note. A glance at the double-basses, violins, and horns, as a rule, will suffice to establish the particular chord. The fundamental bass part and the melodic outline must be strictly preserved, but the intermediate harmonies must be recognized at a glance and distributed on the spur of the moment. On account of the transposing instruments, skill in transposition is essential.

SCOREL, skô'fôl, JAX VAN (also SCHOREEL and SCUTOORLE) (1495-1562). A Dutch landscape, historical, and portrait painter, the first to bring the influence of the Italian Renaissance into Holland. He was born at Schoorl, near Alkmaar, studied under the brothers Jacob and Willem Cornelisz at Haarlem and Amsterdam, and finally became a pupil of Albert Dürer in Nuremberg. Subsequently he went to Rome, where he was made overseer of the Vatican Gallery by his countryman, Pope Adrian VI. His pictures are now rather scarce, as many of them were destroyed by the Dutch iconoclasts. There are a "Magdalen," a "Queen of Sheba," a "Bathsheba," and an "Adonis," in the museum at Amsterdam; a Madonna and portraits of a man and of a boy, in Rotterdam; "The Fall of Man," "The Baptism of Christ," "Saint Cecilia," and a portrait group of Knights Templars at Haarlem.

SCORESBY, skôz'bi, WILLIAM (1789-1857). An English Arctic explorer and physicist. He was born near Whitley, Yorkshire. When only eleven years of age the boy accompanied his father, a whaler, to Greenland and afterwards he was his constant companion on his voyages. During the winter months he studied in Edinburgh University, navigation, mathematics, natural history, chemistry, and some other branches. After 1806 he began the study of the meteorology and natural history of the Arctic regions, and attracted the attention of scientific men by his careful and accurate papers on these topics. In 1806, while chief officer on his father's ship *Resolution*, he reached latitude $81^{\circ} 30' N.$ in longitude $19^{\circ} E.$, the most northern point authentically known to have been attained up to that time. His father and he saw the unknown coasts of East Greenland in their voyages of 1817 and 1821. It was in 1822, however, that Scoresby made his most important voyage. Early in June he was near enough to Greenland to chart the coast from Cape Hold with Hope (discovered and named by Hudson in 1607 on the north side of the entrance of Franz Josef Fjord in $73^{\circ} 30' N.$) to Gale Hamke Bay, $75^{\circ} N.$, named after its Dutch discoverer in 1654. During the next three months he surveyed and charted with great care and accuracy 800 miles of winding coasts, completely changing the supposed geographic features of East Greenland.

Scoresby afterwards entered the Church and was appointed curate of Bessingby in 1825. His scientific labors, however, ended only with his life. He contributed largely to the knowledge of terrestrial magnetism, made a voyage to Australia in 1856 to obtain new data on this subject, wrote many papers for the Royal and other societies on this and other branches of science, and made

valuable observations on the height of Atlantic waves during two visits to America. He was also much interested in social problems and especially in improving the condition of factory operatives. His Arctic books are *History and Description of the Arctic Regions* (1820), and *Journal of a Voyage to the Northern Whale Fishery, Including Researches and Discoveries on the Eastern Coast of Greenland* (1823). His *Journal of a Voyage to Australia for Magnetical Research* was published in 1859, after his death. His nephew, Dr. R. E. Scoresby Jackson, published *Life of William Scoresby* (London, 1861).

SCORPÆNIDÆ, skôr-pæ'ni-dê (Neo Lat. nom. pl., from Lat. *scorpiæna*, from Gk. σκρῆπανα, *skorpiaina*, sort of fish, from σκρῆπος *skorpios*, scorpion). A very large and important family of spiny-rayed fishes, the rockfishes (q.v.). The body is elongate, compressed, and bears ctenoid scales. The head is large and armed to a greater or less extent with ridges or spines. The mouth is usually large, the teeth villiform. The dorsal fin is long, the anterior portion spinous; the anal short, with three spines, and 5 to 10 soft rays. Many of the species are viviparous, the young being when born about one fourth inch long. They are non-migratory fishes, inhabiting the rocky margins of all seas, especially the temperate Pacific. The family includes about 30 genera and 250 species, many of them of large size and all good as food-fishes. Many of the species are reddish and are hence called 'rose-fishes' (q.v.).

SCORPION (Lat. *scorpio*, from Gk. σκρῆπος, *skorpios*, scorpion). One of the tailed arachnids of the order Scorpionida, natives of warm countries in both the Eastern and Western Hemispheres. The body is divided into a short, compact, leg-bearing cephalothorax and a long segmented abdomen. The last five segments of the abdomen form a slender, tail-like portion. The terminal segment is modified into a curved sharp sting provided with two pores from which the poison flows. The poison is supplied by two poison glands at the base of the segment. To the cephalothorax are attached six pairs of appendages. The first pair (mandibles) is short, the second pair (palpi) long, and both pairs bear pincers. Those of the palpi are very large and resemble lobster claws. The four succeeding pairs of appendages are true legs. The abdomen is without appendages save the second segment, which bears two comb-like organs, the pectines, the function of which is not known. There are four spiracles or breathing pores on each side of the abdomen. There are from three to six pairs of eyes. The sexes differ in the broader pincers and longer abdomen of the male. They are viviparous and the mother carries her young about with her for some time after they are born. They cling to all parts of her body by means of their pincers. Scorpions feed on spiders and

1, Full figure of *Scorpio*; 2, mouth-parts enlarged; a, chelicerae; b, lateral coxelli; c, central large coxelli; d, maxillary palpi; e, telson (the sting).

They creep about, and they seize with their claws and scissor-like poisonous sting. They hide by day under stones or under stones or in dark holes, and are largely nocturnal in their habits. They run with great swiftness and with the tail curved over the back. Some species may enter houses and hide in boots, shoes, or garments, and, when disturbed, sting human beings. The sting is very painful, but rarely, if ever, fatal. The poison should be pressed or sucked out of the wound and ammonia should be applied externally and taken internally. No scorpions occur in the United States north of Nebraska, but in the South about 20 species are known.

Scorpions are the most primitive of living arachnids, show very close resemblance to the king crab (q.v.), and occur as fossils in the Silurian rocks, but the early forms differ little from modern types. The word 'scorpion' is used in combination in the common names of other closely related orders such as the false scorpions and whip-scorpions. (See ARACHNIDA.) The false scorpions (order Pseudoscorpiones) are small Arachnida which resemble the true scorpions, but lack the long jointed tail. The abdomen is ovate and broader than the cephalothorax, and there is no poison-sting. The jaws are fitted for sucking, but the palpi bear large pincers as in the true scorpions. There are two pairs of spiracles and two or four eyes, although some forms are blind. The female lays eggs which she carries attached to the first segment of the abdomen. The false scorpions are swift runners, moving sidewise and backward with equal facility. They feed on mites, psocids, and other minute insects and are found in moss, under the bark of trees, or between the leaves of dusty books. *Chelifer caneroides* is common in store-rooms in old houses. They are often found attached to other insects, especially to flies. The whip-scorpions, or 'whiptails' (order Pedipalpi) are arachnids with a long body, segmented thorax, and a long whip-like appendage at the tip of the abdomen. The fore legs have many tarsal joints and are elongated and whip-like. The mandibles are furnished with claws and the palpi are very large and are armed with strong spines. The whip-scorpions are tropical in their distribution. One species (*Theliphonus giganteus*) is found in the Southern United States, where it is known as the 'mule-killer,' 'vinaigrier,' or 'vinegarone,' the latter names derived from an acid secretion which has the odor of vinegar, and which is ejected by the creature when disturbed or alarmed. Although very dangerous in appearance, it is perfectly harmless to man. It feeds upon insects during its whole life, the adults destroying large grasshoppers and beetles.

Consult: Kingsley, *Standard Natural History* (Boston, 1884); Comstock, *Manual for the Study of Insects* (Ithaca, 1895); Lankester, "Limulus an Arachnid," in *Quarterly Journal Microscopical Science* (London, 1881); Laurie (ib., 1890).

SCORPION-FISH, or SCORPENE. A fish of the genus *Scorpena*, typical of the Scorpenidae (q.v.); specifically, the common market-fish of southern California (*Scorpena guttata*), which is about a foot long, and brown, mottled, rosy, olive, and other tints.

SCORPION-FLY. Any one of the curious insects belonging to the order Mecoptera, which

contains the single family Panorpidæ. Strictly speaking, the term 'scorpion-fly' should be restricted to the members of the typical genus *Panorpa*, which have the terminal segments of the abdomen elongate and very mobile, while the genital organs are curiously enlarged and modified. This tail-like structure is carried in a curved position over the back, somewhat after the manner of the true scorpions. The scorpion-flies have four wings, with many veins, and the head is prolonged to form a deflexed beak which is provided with palpi near the apex. The metamorphoses are complete. The larvæ are provided with legs and usually with numerous prolegs like the sawflies. The larvæ are carnivorous and live near the surface of the ground. They feed usually upon dead animals, including such soft-bodied insects as caterpillars and grubs. The representatives of the family in the United States are all contained in the genera *Panorpa*, *Bittacus*, and *Boreus*. The panorpas are very common insects in the mid-summer in most parts of the United States. Some of them have spotted wings and are seen flying in the bright sunlight in places where tall herbage abounds. The genus *Boreus* is composed of wingless forms which look something like minute grasshoppers, and occur in the winter upon snow in the Northern States.

SCOR'ZONE'RA (It., black bark). A rather large genus of plants of the natural order Compositæ, natives mostly of Europe and Asia. The common scorzonera or black salsify (*Scorzonera Hispanica*), a native of Southern Europe, has long been cultivated for its tapering black esculent roots about the thickness of a man's finger. The leaves are sometimes used to feed silkworms.

SCOTCH FANCY CANARY. See CANARY.

SCOTCH LAW. The most ancient records of this body of law indicate that its fundamental principles and institutions are very similar to those of Anglo-Saxon England. At a very early period, however, the jurisprudence of Scotland began to diverge from that of its southern neighbor. In England a system of national courts was established as early as the thirteenth century, whose decisions were reported and formed precedents for future cases. Not until the middle of the sixteenth century, however, did Scotland secure anything in the nature of a complete judicial system. A century earlier, it is true, a Court of Session had been established, consisting of certain persons named by the King out of the three estates of Parliament, and receiving its name from the fact that it was to hold a certain number of sessions annually at places to be named by the King. It was a court of first instance, in the main, and no appeal lay from its decisions. Its judges were so negligent in the performance of their duties, however, that it was abolished in 1532, and a new Court of Session and College of Justice instituted. Until the middle of the sixteenth century, therefore, there was no opportunity for the development of a national system of Scotch law. Nearly all litigation was conducted in local tribunals, of which the most important was the Sheriff's Court (q.v.). In these, local usages and customs were enforced, but a common law of the realm was not and could not be evolved. "A private transcript of Glanvil's *Treatise on the Laws of England*, altered so as to adapt it to the notorious prac-

tice in Scotland, and feigned to have been compiled by order of David I." appears to have been received by the Scotch Parliament and judges as a correct statement of their written law down to the opening of the sixteenth century. After the establishment of the College of Justice, the unwritten law of Scotland developed rapidly, although along lines quite different from those followed in England. The tribunal itself had been modeled not after any English court, but after the constitution of the Parliament of Paris. Its judges consisted of seven churchmen, seven laymen, and a president. After the Reformation clergymen were received as judges, until 1640; but since then only duly qualified advocates are appointed to this court, and their selection is a prerogative of the sovereign. The system of legal rules administered by this tribunal was not so much that of England as that of Rome. Scotch lawyers were educated in France or Italy or Holland, where the Roman civil law prevailed. Scotch judges had no such antipathy to that law, either in its original form or in the modified form in the canon law, as characterized the judges of England. As a result, modern Scotch law has a very large infusion of the principles of the Roman law. Even at present admission to the Faculty of Advocates is conditioned upon a successful examination in the Roman law, and no one not an advocate is qualified for a judgeship in the Court of Session unless he has passed such an examination.

Since the union of Scotland and England the tendency of legislation has been toward the assimilation of the legal systems of the two countries. Lord Cockburn declared in 1846 that "the improvements introduced or recommended in England by law reformers amount, in a really surprising number of instances, to little else than an approximation to the law of Scotland." While this is true, it is also to be said that the most recent legislation has modified many of the Scotch rules and brought them into accord with those of English common law. Notwithstanding the process of assimilation which has been going on for two centuries, nevertheless the two legal systems present many striking differences still. Some of the most important are the following:

The nomenclature is so different that a learned writer upon the topic has declared that an interpreter is generally required in case of consultations between English and Scotch lawyers.

In matter of substance, the two legal systems are quite as much at variance as in terminology. English law divides property into real estate and personalty. Scotch law classifies it as heritable or movable. Heritable property includes not only lands and all rights of or affecting lands, but various forms of personal property such as certain bonds; also chattels which the owner directs shall vest in his heirs. Movables are all kinds of property which go not to the heir, but to the executor. Again, English law requires that every contract not under seal must have a consideration, while "in Scotland it is not essential to the validity of an obligation that it should be granted for a valuable consideration, or, indeed, for any consideration, an obligation undertaken deliberately, though gratuitously, being binding." In English law, obligations are divided into those of contract (q.v.) and those in tort (q.v.).

Scotch law classifies them as contracts (subdividing these in accordance with the Roman law into real and consensual), quasi-contracts, delicts, and quasi-delicts. Under the head of quasi-contracts it places certain obligations not so classed by the Roman law. Delict includes those torts of the English law which are also criminal offenses; while quasi-delict includes torts of negligence or impudence. Consult: Paterson, *A Compendium of English and Scotch Law* (Edinburgh, 1865); Lorimer, *A Handbook of the Law of Scotland* (Edinburgh, 1894); Erskine, *Principles of the Law of Scotland* (Edinburgh, 1895); MacKenzie, *Studies of Roman Law, with Comparative Views of the Laws of France, England, and Scotland* (Edinburgh and London, 1898).

SCOTCH MUSIC. The music of Scotland is of the same general character as that of Ireland and Wales. (See CHANT MUSIC.) The national melodies are generally considered to be of great antiquity. No musical manuscript of Scotch airs is now known to exist of an older date than 1627; and we have no knowledge when and by whom the early Scotch melodies were composed. Their disappearance seems to have been due first to the strong measures resorted to, about 1530, by both civil and ecclesiastical authorities, to put down all ballads reflecting on the Roman Catholic hierarchy, and afterwards to the ill-will shown by the dominant Presbyterians toward worldly amusements. The most valuable existing early collection of Scotch melodies is the Skene manuscript, in the Advocates' Library, noted down by Sir John Skene of Hallyards about the year 1630. It contains a number of native airs, mixed with some foreign dance-tunes—upward of a hundred in all. Many of the Scotch melodies exhibit beauties which the changes these airs have undergone have only tended to destroy.

Among the peculiarities which give character to the music of Scotland, the most prominent is the prevalent omission of the fourth and seventh of the scale, and consequent absence of semitones. Another characteristic is the substitution of the descending for the ascending sixth and seventh in the minor scale, as at the beginning of the air called *Adew, Dundee*, in the Skene manuscript. A very prevalent course of modulation is an alternation between the major key and its relative minor, the melody thus ever keeping true to the diatonic scale of the principal key, without the introduction of accidentals. The closing note is by no means necessarily the key note, a peculiarity especially remarkable in the Highland airs, which, if in a major key, most frequently terminate in the second; if in a minor, on the seventh. Closes are also to be found on the third, fifth, and sixth. Among the printed collections of Scotch melodies with words, the most important is George Thomson's collection, with symphonies and accompaniments by Pleyel, Kozeluch, Haydn, Beethoven, Bishop, Hummel, and Weber (vols. i-iv., 1793-1805; vol. v., 1826; and vol. vi., 1841), one distinguishing feature of which was the appearance of Burns's words conjoined with the old melodies of the country. Consult: Ballantine, "Historical Epitome of Scottish Songs," in *Fisher's Laws and Lyrics of Scotland* (Glasgow, 1870); Stenhouse, *Illustrations of the Lurie Poetry and Music of Scotland* (Edinburgh, 1853). See BAGPIPES; PHRASES; REEL.

SCOTLAND. SCHOOL OF PHILOSOPHY. A school of Scotch philosophic tendency, which flourished in the 17th and 18th centuries. Its chief heads were Reid, Sir William Hamilton, James Beattie, James Oswald, Dugald Stewart, Thomas Reid, Alison, and others. The leading principle of the school is that we have an immediate knowledge of the external world without the aid of principles. See the articles on the above-named thinkers; also PHILOSOPHY, HISTORY OF.

SCOTCH TERRIER. See TERRIER; and Plate of Dogs.

SCOTCH VERDICT. The verdict of 'not proven' which the jury in a criminal trial in Scotland are permitted to find in certain cases. The defendant cannot be again tried on the same charge. See GUILTY; VERDICT.

SCOTER (from *lecl. skoti*, shooter, from *skopata*, OLG, *sciozan*, Ger. *schossen*, AS. *scōtan*, Eng. *shoot*; ultimately connected with Skt. *skand*, to leap). A sea-duck of the genus

BILL OF A SCOTER.

Oidemia, of which there are several species, with tumid or gibbous bill and no frontal processes; the tail has 14 or 16 feathers. The male is black, sometimes with white on head and wings; the female sooty-brown.

The largest American species is the white-winged scoter (*Oidemia deglandi*), which is 22 inches long and is very similar to the Old World scoter (*Oidemia fusca*). The surf-scoter (*Oidemia perspicillata*) is a trifle smaller, and has no white on the wings. The American black scoter (*Oidemia americana*) is still smaller (19 inches) and has no white on either head or wings. It is very similar to the European *Oidemia nigra*. These three American scoters are abundant in winter off the coast of New England and the Middle States. They feed on mussels and other mollusks, and are considered poor eating. All breed in high northern latitudes and lay from 5 to 10 eggs in nests on the ground.

SCOTIA, skō'shā. The hollow or concave molding between the fillets of the tori of the base of Ionic, Corinthian, and derivative orders. (See BASE.) It is also called trochillus, but differs somewhat from the cavetto (q.v.) of the Romans.

SCOTIST. A follower of Duns Scotus (q.v.) in philosophy or theology. See SCHOLASTICISM.

SCOTLAND. A constituent member of the United Kingdom of Great Britain and Ireland. It occupies the northern portion of the island of Great Britain, together with three outlying groups of islands, the Hebrides to the west and the Orkney and Shetland islands to the northeast. Scotland is bounded by the Irish Sea, North Channel, Atlantic Ocean, and the North Sea on all sides except a comparatively short stretch on the southeast where it is contiguous to England. The whole is included between latitudes 54° 38' and 60° 51' N., the mainland terminating in latitude 58° 41' N. The greatest extent of the mainland from Dunnet Head in the northeast to the Mull of Galloway in the southwest is 288 miles, and its breadth varies between

25 and 146 miles. The total area of Scotland, including the islands, is 29,785 square miles. A general discussion of the topographical, climatic, biological, and geological features of Scotland, together with those of England and Wales, is given under the title GREAT BRITAIN, reference to which is made also for each of the headings below.

Perhaps the most striking general feature of Scotland is its irregularity in outline. Though much smaller than England in area, it has a longer coastline, about 2300 miles, which gives a proportion of 1 mile to every 13 square miles of area. Few places lie 40 miles from the sea. The east coast is indented by two large arms of the sea, which almost cut the country into three sections, while the west coast is dissected by numerous fiords, or firths, which have converted many headlands into islands. Prominent among the firths are the Firth of Forth on the east, Moray Firth on the northeast, the Firth of Lorne and the Firth of Clyde on the west, and Solway Firth on the southwest border. Scotland differs from England topographically in that the greater part of its surface is mountainous, only the comparatively small south central portion being lowland. The lowlands of the south are divided from the highlands of the north by the broad short valleys of the Clyde and Forth. The former district resembles fertile England; the latter, a much more extensive region, is in the main bare and rugged and capable of supporting but a sparse population. The extreme southern part of Scotland is a region of mountains and hills, embracing fertile valleys. The best known range here is that of the Cheviot Hills, on the English border. Middle Scotland, extending from the Clyde and Forth valleys north to the Caledonian Canal, which connects Moray Firth with the Firth of Lorne, is almost exclusively mountainous, characterized by the Grampian Hills, and containing Ben Nevis, at the head of the Firth of Lorne, the highest mountain in Great Britain (4406 feet). The plain of Strathmore, however, the most extensive cultivated section in Scotland, lies in this division of the country, northeast of Stirling. Southeast and east of this plain are the Ochil and Sidlaw Hills. North Scotland—the northwestern Highlands—the poorest part of the country, is an upland of swamp, moors, and bald, barren features. The highest peak in this region is Ben Dearg, 3550 feet. The scenery here is highly picturesque and inspiring, being varied by castled elevations, lakes, valleys, glens, rivers, cascades, and rocky coasts. The highest peaks in South Scotland have an elevation of about 2700 feet. The rivers and lakes of Scotland are described under GREAT BRITAIN. Geologically Scotland is more thoroughly of ancient formation than England. In both the northern and southern highland regions little but Archaean gneisses and Lower Paleozoic metamorphic rocks remain, but in the central depression a large Carboniferous area containing rich coal fields still survives the long ages of denudation. Igneous rocks of all ages are also more common in all parts of the country than in England.

MIXING. The annual production of coal is rapidly increasing. Considerably over half of it is mined in the County of Lanark. Other minerals are mined in much smaller quantities. Shale oil is procured in the lowlands, the value of the

output for 1900 having been 4626,966; and iron ore is exploited, Ayrshire County producing the largest quantity. The total value of the iron mined in 1900 was 498,113. The value of the granite quarried in the same year was 4381,244. Other mineral productions of some importance are fire clay, limestone, slate, and lead ore.

FISHERIES. The value of fish taken in 1901, £2,237,952, was a decided increase as compared with the value of the catch a decade earlier, but the catch was about the same. While there has been some decrease in net and line fishing, there was a fourfold increase in the amount of the catch by trawling. In 1900, 40,192 men were engaged on 11,275 fishing vessels. Considerably over one-half of the total catch is herring, the next most important varieties being haddock and eel. The fishing interest of the east coast is largely concentrated in Aberdeen. The large whaling fleet which formerly had its headquarters at Peterhead has dwindled into insignificance.

AGRICULTURE AND STOCK RAISING. Owing to the extensive mountainous area, the development of agriculture is subject to very serious limitations. The cultivation of the soil is largely confined to the lowlands. The area under crops and in pasture increased from an average of 4,560,825 acres for the period 1871-75 to 4,900,131 in 1901, the increase being almost wholly in the permanent pasture land, which in that year amounted to 1,428,224 acres. Over three-fourths of the area devoted to cereals is in oats, the acreage of that crop in 1901 being 956,389. Barley is the only other important cereal crop. Much less attention is given to wheat than formerly. Green crops are extensively grown, but the total acreage of these has decreased in recent years, being 617,486 in 1901. Considerably over two-thirds was in turnips and swedes, which hold there a place as stock foods somewhat similar to that held by corn in the United States. Potatoes are also an important crop. The area in clover, sainfoin, and grasses under rotation in 1901 was 1,593,461 acres. A highly intensive system of cultivation is followed and an exceptional yield of all crops is secured. The size of farm holdings and the system of tenure are much the same as for England. (See GREAT BRITAIN, paragraph *Agriculture*.) Stock-raising is relatively very important. Extensive areas in the mountain regions are utilized for grazing. The country has long been noted for its sheep. Some of the best known breeds, such as the Cheviots, are natives of Scotland. The total number of sheep in 1901 was 7,401,409. In the same year the cattle numbered 1,229,281. Among the well-known native breeds of cattle are the Ayrshire, Galloway, Polled Angus, and Jersey. The Clydesdale horse is one of the best-known breeds of draught horses, while the Shetland ponies enjoy an equal distinction among ponies. In 1901 the horses numbered 194,893. But little attention is given to swine, which numbered only 124,821.

MANUFACTURES. In but few countries is there so large a per cent. of the population engaged in manufactures as in Scotland, in 1891 25.65 per cent. of the population being thus engaged. The history of the development of the industry has been in its main lines quite similar to its course in England. Scotland shares with that country the advantages of climate, of commerce, and of mineral wealth, and has con-

tributed a goodly portion of the inventive genius, thrift, and business enterprise that have given Great Britain its high industrial rank. There are three groups or branches of manufacturing that have attained special prominence, namely, textiles, liquors, and iron and steel. Among the textiles, woollens, linens, and cottons are all important. Although Scotch woollens have been manufactured for centuries, they did not become prominent until the period of the revolution in the industry brought about by improved machinery in the early part of the nineteenth century. The woollens manufactured in the district of the Tweed are famous and their production has become important in a large number of towns. Other varieties that have become well known are tartans, plaids, and shawls. From 188 woollen and worsted factories with 233,533 spindles and 10,210 persons employed in 1850, there was an increase to 246 factories with 621,034 spindles and 22,667 persons employed in 1878, and to 282 factories with 639,721 spindles and 31,077 persons employed in 1890. No later figures on manufactures are available. The manufacture of linen had acquired large proportions as early as the seventeenth century, notwithstanding the attempts of the English to hinder its development. The industry profited much from the union with England and grew rapidly during the eighteenth century. In 1798 the value of the linen manufactures was estimated at £850,005. The greatest development in the industry was attained about 1867, when 77,195 persons were employed in 197 factories, in which there were 487,579 spindles. Following this, foreign competition has been more severe and the industry has not been in so prosperous a condition. In 1890 there were 34,222 persons employed in 136 factories in which there were 208,354 spindles and 18,599 power looms. The linen industry is widely distributed. The manufacture of cotton goods developed very rapidly in the latter part of the eighteenth century and the early part of the nineteenth. In 1861 there were 163 factories employing 31,237 persons, the spindles numbering 1,915,398, and the power looms 30,110. Little progress has been made since that period, the factories in 1890 numbering 121, employing 34,878 persons, and using 1,204,113 spindles and 28,093 power looms. Most of the cotton factories are located in Glasgow or its vicinity. In late years the weaving of lace and the manufacture of silks have grown into industries of some importance.

Distilling is probably the most thriving of the Scotch industries. Scotland is unrivaled in the reputation of its whisky. The production of this article increased from 5,108,373 gallons in 1824 to 20,164,962 gallons in 1881 and to 31,798,465 gallons in 1900, the output for the last year being considerably more than half the product for the United Kingdom. Scotland manufactures only a small fraction of the beer made in the United Kingdom, the output in 1900 being 2,137,030 barrels. The mining of iron and coal in the low country has given rise to the development in that section of a large iron and steel industry. It began in 1760 and by the middle of the nineteenth century it employed 13,296 persons. In 1900 1,156,885 tons of pig iron were produced, which was about one-seventh of the total for the United Kingdom. The production of steel ingots in West Scotland

of 1,419,200 tons. Scotland is widely known for its ship-building, and is the largest ship-building centre in the world. The vessels of the Union Line are built in the Clyde shipyards. There are also a number of other ship-building centres, but of much less importance. The industry, though subject to occasional checks, is growing. In 1901 576 vessels were built, having an aggregate tonnage of 554,406 tons. There is a large variety of less important industries such as the manufacture of chemicals, pottery, confectionery, and preserves, etc.

TRANSPORTATION AND COMMERCE. The railroad mileage increased from 2999 in 1884 to 3485 in 1900. The Caledonian Canal, connecting Moray Firth with Loch Linnhe and completed in 1847, served for a time as a ship canal, but as vessels became larger their transit through the canal became impossible, and it is now used mainly for purposes of local traffic. Some of the canals of the Lowland district have been superseded by railroads. The course of the Clyde River has been greatly improved, until ocean vessels can reach the city of Glasgow. This city is the principal port of Scotland. The total tonnage entered and cleared at its port in 1901, excluding the coast-wise trade, was 3,825,890. Leith, the next most important port, was credited with a tonnage of 1,945,754 for the same year. These are followed at a distance by Dundee, Grangemouth, Greenock, and Aberdeen. In 1900 the total tonnage entering Scottish ports in the coast-wise trade was 7,213,574, and in the colonial and foreign trade 5,657,200. The value of imports into Scotland in the foreign and colonial trade increased from £8,921,108 in 1851 to £31,012,750 in 1874, and to £38,691,245 in 1900. The value of the exports leaving Scottish ports increased from £5,016,116 in 1851 to £17,912,932 in 1874, and to £32,166,561 in 1900, Scotland having a large percentage of this trade. A considerable export trade not represented in these figures passes through the English ports. See the paragraph *Commerce* in the article GREAT BRITAIN.

FINANCE. Scotland is subject to the same fiscal system as are the other members of the United Kingdom, a discussion of which will be found in the article GREAT BRITAIN, paragraph *Finance*. For the fiscal year ending March 31, 1902, the amount contributed by Scotland to the revenue collected by Imperial officers was £16,055,000, of which £13,115,000 was collected from taxes. The largest item was the excise tax, productive of £4,326,000, followed by the income tax, £3,645,000; customs, £2,981,000; estate, etc., duties, £1,411,000; stamps, £604,000; land tax and house duty, £148,000. The non-tax revenue, chiefly from postal and telegraph services, amounted to £1,858,000, and the revenue derived from local taxation amounted to £1,082,000. The expenditure for Scottish services during the same year amounted to £5,659,000. The aggregate amount raised by local authorities for local purposes increased from £8,097,456 in 1890-91 to £13,801,788 in 1898-99.

For *Banks, Government, and Charitable and Penal Institutions*, see under GREAT BRITAIN.

POPULATION. The population of Scotland at the time of the Union in 1707 was estimated at 1,000,000. The first official census taken of the population in 1801 showed the inhabitants to number 1,698,420. By the middle of the century

(1851) it had further increased to 2,888,742, in 1891 to 4,025,647, and in 1901 to 4,472,103. In the last of these years Scotland contained 10.8 per cent. of the total population of the United Kingdom, which was but slightly greater than the corresponding per cent. at the beginning of the nineteenth century. The density per square mile in 1901 was 149, as against 606 for England. The population, however, is very unevenly distributed, being quite sparse over the large Highland area, while the Lowlands, namely the Glasgow-Edinburgh region, is one of the most densely populated districts in Great Britain. Between 1891 and 1901 the town districts—places having 2000 inhabitants and over—increased in aggregate population from 2,925,080 to 3,567,280, while during the same period the mainland rural districts made only the slight gain of from 974,841 to 983,274, and the insular rural districts decreased in population from 125,726 to 121,446. The following table shows the growth of the larger cities:

	1861	1891	1901
Glasgow	394,864	618,052	735,906
Edinburgh	168,121	264,796	316,479
Dundee	90,417	155,675	160,871
Aberdeen	73,805	123,327	143,722

The following table gives the list of the administrative divisions of Scotland, their areas and populations.

DIVISIONS AND CIVIL COUNTIES	Area in sq. miles	Population	
		1891	1901
Shetland.....	551	28,711	28,166
Orkney.....	376	30,453	28,699
Caithness.....	686	37,177	33,870

Kirkcubright.....	899	39,985	39,383
Wigtown.....	487	36,062	32,685
Total.....	29,785	4,025,647	4,472,103

The population of Scotland contains but a small number of non-Scots, amounting in 1900 to only 8.37 per cent. of the total. Considerably over half of these were Irish and the majority of the remainder were English. The foreign element amounted to only .21 per cent. of the total population. In the decade 1891 to 1900, 186,012 of the Scotch element left the United Kingdom for

places out of Europe. Considerably over one half of the Scotch emigrants in the last half of the nineteenth century went to the United States. Many of the Irish and the other non-Scotch elements residing in the country also have left for other lands. In 1901 the males numbered 2,175,151 and the females 2,294,849. In the same year the births numbered 132,178, the deaths 80,103. The numbers engaged in occupations according to the returns of 1891 were classified as follows: Professional, 111,319; domestic, 203,153; commercial, 180,952; agricultural and fishing, 249,124; industrial, 1,032,404; and the remainder or unproductive class, 2,248,655.

RELIGION. Scotland is the stronghold of Presbyterianism, and the mass of the population belong to that faith. The established branch of the Presbyterian Church includes about one-half of the Protestant Church population. In 1899 the congregations of this Church numbered 1447 and the membership 648,476. In 1900 the two branches—the Free Church of Scotland and the United Presbyterian Church of Scotland—were united under the name of the United Free Church of Scotland. Before the union the Free Church had 1169 congregations with 404,828 members and an additional 61,000 adherents, and the United Presbyterian had 589 congregations with 177,517 members. There are a number of other non-conforming bodies, but all of them small. The Episcopal Church in 1899 had 356 congregations and over 114,000 communicants and other members. The Catholic population was estimated in 1898 at 413,000; it consists mainly of the Irish element.

EDUCATION. The supremacy of Scotland over the other parts of the British Isles in elementary and secondary education is generally admitted. In remarkable contrast with England, the country is distinguished for having early made public provision for instruction, and the religious controversies did not prevent the development of a homogeneous system. An act passed in 1696 obligated the landowners to the support of schools, and they with the ministers of the parishes had charge of the administration of the system. An educational committee reported in 1829 that their schools were open freely to Roman Catholics and that the teachers were directed not to press on them any instruction to which their parents or priests might object. Small Parliamentary grants to education began between 1830 and 1840. After 1861 it was only required of the teachers that they should not teach opinions opposed to the divine authority of the Scriptures or to the doctrine of the Shorter Catechism. By the Parliamentary Educational Act of 1872 the board system was established, in accordance with which a school board elected in every parish and burgh every three years has charge of both elementary and secondary education. School boards have the power of prescribing religious instruction, but the time of giving it must be such that children absenting themselves will not miss any of the secular instruction. Since 1891 instruction has been free for children from three to fifteen years of age and compulsory between the ages of five and fourteen, with conditional exemption after twelve. The instruction given in the parish schools has been mainly elementary, and secondary instruction was provided by the burgh schools and the academies. Unlike England,

private boarding schools have never been widely patronized in Scotland. Burgh schools were established prior to the Reformation; they were regulated by the burgh authorities and open to the general community, but there was never any provision by national enactment for their organization or financial support. The desire for more modern or practical courses of instruction, resulted about the middle of the eighteenth century in the establishment of academies. However, the opportunities to receive a university preparation were always, and still remain, in a measure inadequate, necessitating the assumption of that work by the universities themselves. A Parliamentary act was passed in 1887 making technical education possible.

In proportion to population Scotland has a larger number of universities and a much larger attendance than has England. The universities are Saint Andrews, founded in 1411; Glasgow, 1450; Aberdeen, 1494; and Edinburgh, 1582. The Scotch universities contrast strikingly with the older English universities in that the expense incurred in taking the course is much smaller in the former. Governmental financial support has never been very liberally extended, but has increased in recent years, which, together with the Carnegie gifts, has placed them upon a much better financial footing than ever before. Women are admitted to the universities under the same conditions as are men.

ETHNOLOGY. The people of Scotland, called Scots or Scotch after a Celtic tribe originally from Ireland, are derived from widely different stocks. The most primitive race were long-headed and they have been classed with Sergi's Mediterraneans. These were followed by a brachycephalic people like Ripley's Alpine race, but in Scotland they were tall, with massive jaws and broad faces. The third ingredient is a long-headed race, Teutonic, and of lofty stature. From the Stone Age until the eleventh century of our era there is evidence of a continuous Scandinavian invasion penetrating into the north country and entering largely into the composition of the Scotch Highlanders. They belong to the tallest people in the world, having an average height of 1.746 meters, in Ayrshire 1.782 meters, and in Galloway 1.792 meters; the cephalic index is 76.2-77.9. There are two centres of speech in Scotland. In the north Gaelic is spoken, belonging, with Irish and Manx, to the Gadhelic division of the Celtic mother tongue. In the south it is Lowland Scotch, an interesting local mixture of Scandinavian and English.

HISTORY.

At the end of the fifth century the Scots, an Irish people, settled in modern Argyll, and soon spread along the western coast from the Clyde to modern Ross. Their kingdom was called Dalriada. To the east of them, occupying the whole country north of the Forth, was the Pictish kingdom (see PICTS), and to their south lay the British Kingdom of Cumbria, which extended along the western coast from the Clyde to the border of Wales. The English Kingdom of Bernicia, a part of Northumbria, occupied the remainder of modern Scotland south of the Forth.

The early history of the Dalriad Scots is a narrative of warfare with the other kingdoms. Their first King of whom we have record, Fergus

the island of Ireland in the fifth century, and in the sixth century by Saint Patrick himself. The missionaries were the Britons, the Picts, the Scots, the Irish Christians, and their King, Columba, who sailed to the island of Iona to Saint Columba, and the northern Picts. Aidan, another of the missionaries, repeatedly invaded Bernicia, and was slain by the heathen Ethelfrid at Deorham in 603. There followed a short period of English supremacy over both Scots and Picts, but in the decisive battle of Nechtansmere (685) the latter destroyed an English army, and both peoples became independent. About 730 the Pictish King, Angus MacFergus, subdued both the Scots and the Britons. But internal dissensions and the attacks of the Northmen broke the strength of the Pictish kingdom, and in 843 Kenneth MacAlpin, King of the Scots, was acknowledged King of Pictland. All the country north of the Forth and the Clyde was thus united into one kingdom. It was at first called Alban, but in the tenth century the name Scotland became common. Kenneth I. (843-859) transferred his seat to Forteviot in Strathernie, the Pictish capital. By the marriage of his daughter to the King of Cumbria he secured an alliance of all the Celts of Scotland against the Teutonic invaders. He often raided Lothian, and repulsed the Northmen from Dalriada, but neither he nor his successors could prevent them from occupying the Orkneys and Shetlands, and from obtaining a foothold in the extreme north of Scotland.

The centre of the Scotch kingdom was the country between the Forth and the Spey, and its Kings were constantly engaged in struggles with the rebellious chiefs of Moray. The seven original provinces of Pictland were ruled by under-kings, but with the growth of the royal power these kinglets were replaced by *normans*, or great stewards, who were royal officers. The tribal chieftains under them were called *toisachs*. They, as well as the *normans*, were chosen in the assembly of the free tribesmen from the ruling family. Constantine II. (904-943) fixed the royal residence at Scone. In a national council held at Scone (906) he and his bishop, Cellach, regulated the affairs of the Scottish Church. He repeatedly repulsed the Northmen, but later in his reign formed an alliance with them and with Cumbria against the growing power of Athelstan of England. The allies were defeated in the great battle of Brunanburh (937). Constantine also succeeded in placing his brother Donald upon the throne of Cumbria. His successor, Malcolm I. (943-954), acquired the southern part of Cumbria (modern Cumberland and Westmoreland) from Edmund, King of England, who had conquered it. But the permanent southern borders of Scotland date from the reign of Malcolm II. (1005-34). The royal line of Strathelyde (northern Cumbria) having expired, that country had become a part of Scotland by inheritance. Even more important was the acquisition of Lothian, which Malcolm wrested from the English by his victory of Carham in 1018. Malcolm's attempt to set aside the Scottish law of the succession by the murder of the legitimate heir (i.e. his brother's son) led to the murder of his grandson, Duncan, by Macbeth, Mormaer of Ross and Moray. Shakespeare's wonderful tragedy has treated this event, but his sources were at variance with historic truth. Duncan was in reality an immature youth, and Macbeth, who had married the mother of the

true heir and was his guardian, represented the legitimate succession. Far from being a cruel tyrant, he was an able monarch, whose reign of eighteen years was one of comparative peace and prosperity.

FEDERAL AGE (1054-1286). The accession of Malcolm III. (1054), better known as Malcolm Canmore, marks the beginning of a new epoch in Scottish history. It was the age of the Anglo-Norman influence, of the introduction of the feudal system in Church and State, and of the foundation and growth of towns. Scotland left her Celtic isolation and entered the community of European nations. The long residence of Malcolm III. in England, and especially his marriage with the sister of Edgar the Atheling, rendered his sympathies English, and involved him in English affairs. He espoused their cause against the Norman conquerors, and received many of the victims of William's devastation of Northumberland as settlers in Scotland. His Queen, who was afterwards canonized as Saint Margaret of Scotland, used her great influence to bring the Celtic Church into the communion of Western Christendom by the assimilation of its usages to those of the Roman Church. On the death of Malcolm (1093) a Celtic reaction occurred. Donald Bane, the King's brother, was chosen to succeed him, and the English courtiers were driven out of Scotland. But English aid soon placed Malcolm's son Edgar on the throne, and during his reign (1097-1107), as well as during the reigns of his brothers Alexander I. and David I., the Anglo-Norman influence triumphed. Edgar's reign was marked by the permanent removal of the royal residence to Edinburgh, and by the loss of the Hebrides and part of the western mainland to the Northmen.

During the reigns of Alexander I. (1107-24) and David I. (1124-53) the feudal system was greatly strengthened in Scotland, both in Church and State. Nine bishoprics were created in place of the single bishopric of the Scots, although Saint Andrews continued to hold the primacy. Parishes were established and endowed throughout the country. Foreign ecclesiasties took the place of the Scotch monks, and stately new abbeys were founded, especially by David, who began the construction of Holyrood, Melrose, and the other principal abbeys of the Lowlands. Charters were introduced to take the place of ancient Celtic customs, the *normans* became earls, and the *toisachs* thanes—both royal officers holding their land from the King, who thus became the universal landowner, in place of the tribes. Alexander was still surrounded by Celtic lords, but David portioned out the Lowlands among Norman lords in direct feudal relation to the Crown. Nevertheless, the relation of the tenantry to the new lords was the same as it had been to the old, and there was no oppression of the lower classes, such as took place in the Norman conquest of England. The *visnet* was introduced to take the place of the old practice of compurgation. By this legal process, which was also called the judgment of the peace, every freeman obtained the right to be tried by his peers. The more serious crimes were withdrawn from the lesser courts and made pleas of the Crown. The peace thus became the King's peace, and was maintained by the sovereign in annual judicial circuits until the first half of the fourteenth century, when four justices were appointed to at-

tend to the pleas of the Crown. These reforms were begun by Alexander, but carried out, for the most part, by David. The latter granted many new charters and privileges to the burghs, which grew and prospered during his reign. He prized peace, but his English possessions and relationships brought on war. As husband of the heiress of Northumberland, and brother of the Empress Matilda, he took part in the civil war between her and Stephen. Although defeated in the Battle of the Standard, near Northallerton (1138), he nevertheless attained the object of his ambition when he acquired the Earldom of Northumberland for his son Henry. His son William the Lion, who became King in 1165 on the death of his brother Malcolm, was taken prisoner in an invasion of England, and compelled by the Treaty of Falaise (1175) to swear fealty to Henry II. Scotland remained a feudal dependency for fourteen years, but Richard I. of England renounced the treaty for 10,000 marks of silver. William's son, Alexander II., succeeded him and followed his father's policy of siding with the barons of England in their struggle against John. In 1237, however, he renounced his claims to Westmoreland, Cumberland, and Northumberland for a yearly payment of £200. His successor, Alexander III., recovered the western islands from the Northmen by a formal treaty in 1266, though the question had really been decided in the battle of Largs three years earlier. He then married his daughter to the young King of Norway, and her only child, the Maid of Norway, was declared heiress to the Scotch throne. The death of Alexander III., in 1286, ended this long and prosperous epoch.

WAR OF INDEPENDENCE (1286-1328). The feudal relations of Scotland and England have given rise to much controversy between the historians of the two countries. The facts of the case seem to be that while the English kings usually claimed an overlordship, they had never succeeded in enforcing it except in the case of William the Lion noted above. The Scottish kings did homage for their English possessions and for them only. In 1290, however, Edward I. obtained a favorable opportunity to press the English claims. The Maid of Norway, granddaughter of Alexander III., died on the voyage to Scotland. Thirteen claimants to the throne appeared. Edward I. took the matter into his own hands, claiming this right as suzerain of Scotland. He demanded an acknowledgment of his suzerainty, which was acceded to by the Norman lords and bishops. The Scotch commonalty, however, that is to say, the burghs and the gentry, protested, but without avail. At Norham, in 1293, Edward decided in favor of John Balliol (q.v.), a descendant of the royal house by an elder female line. Balliol was a submissive man, but by his high-handed enforcement of feudal claims Edward drove Scotland to revolt, and to a league with France—the 'auld alliance' with France which lasted over two centuries and a half and was only ruptured by the Reformation. Edward, therefore, invaded Scotland in 1296 and in the battle of Dunbar defeated the Scotch forces. Balliol was deposed and the Norman nobility of Scotland readily swore fealty to Edward as their King.

But the Scotch people were unsubdued, and they soon found a leader in William Wallace (q.v.). After a series of remarkable adven-

tures, he succeeded in arousing the country against the English, and in the battle of Stirling (1297) he destroyed a superior English army. But in 1298 Edward returned with an overwhelming army, and by a new and skillful use of his archers defeated the Scotch at Falkirk. Nevertheless, although Edward repeatedly invaded Scotland, and although in 1305 Wallace was captured and cruelly put to death, the country was not subdued. After the death of Wallace the cause of liberty was taken up by Robert Bruce (q.v.), the grandson of Robert Bruce, Balliol's rival for the throne of Scotland. The nobility supported him as it had never supported Wallace, and he was crowned King at Scone. He gained a series of minor victories over the English, and at length completely routed their superior army at Bannockburn in 1314. From that time until 1328, when the independence of Scotland was formally acknowledged, there were constant invasions of Northern England.

During the War of Independence the Parliament of Scotland first took its definite form. Its origin is to be found in the feudal council of tenants-in-chief summoned by David I. which superseded the council of the seven normans. To the feudal council belonged the lords spiritual (bishops, abbots, priors), and the lords temporal, including the lesser, as well as the greater, barons. With the towns the kings negotiated directly in two groups—the four burghs of the south, of which Edinburgh was the leader, and the Hanse burghs of the north, grouped about Aberdeen. The burghs first appear as an estate in the Parliament of Cambuskenneth, which Bruce called, in 1326, to aid him in the struggle against England. From this date only can we speak of a Scottish Parliament. The three estates sat in the same house, under the presidency of the Chancellor of the Exchequer. The Scotch Parliament, however, never attained the constitutional importance of the English, because the Scotch kings lived within their means, and seldom made demands for money.

SUPREMACY OF THE NOBILITY (1329-1516). In Scotland the nobility was far more powerful than in England. There were many more exemptions from royal judicature, and the royal office of sheriff had become hereditary among the nobility. The prevalence of the tribal system in the Highlands, and to some extent in the Lowlands, strengthened the nobility, because of the intimate personal relation which existed between tribesmen and chief. Moreover, Scotland was unfortunate during the period following the struggle for independence in having most of her kings succeed as minors. During the minorities disorders and feuds prevailed, and peace existed in the royal burghs only. To disorder at home was added almost perpetual warfare on the English border—a dreary chronicle of raids and petty victories on either side. Under David II., the son of Robert Bruce (1329-74), Parliament attained its greatest power, practically conducting the affairs of State, and determining the succession to the throne contrary to the King's desire. In 1371 Robert II., a grandson of Robert Bruce, inaugurated the Stuart dynasty. During the latter part of his reign, which ended in 1396, the Duke of Albany was virtual ruler of Scotland, a position which he held under Robert III. (1396-1406) and during the minority of James

1406-1410). It was not until one year after the death of James I., who had been prisoner in France, and since 1405, was permitted to return to Scotland, a prince of great ability. With a will to rule, he embled the nobility, not hesitating to attain his ends by putting to death his opponents. In his attempt to bring order into Scotland he was aided by the towns. He also sought to make Parliament an instrument to crush the nobility. Finding it impossible to induce the lesser nobility to attend Parliament, he obtained in 1427 that two representative knights should be sent from each sheriffdom in the kingdom, on the model of the English system. This act was unsuccessful, but it became of constitutional importance, because it was re-enacted by the Reformation Parliament in 1560, and in 1585 was finally established as a law.

During the following reigns there was more lawlessness than ever. Some of the nobility were always engaged in treasonable negotiations with England. Chief among the King's opponents had always been the Lords of the Isles, who ruled over what was practically an independent principality in the west. The great House of Douglas, famous in border raids, was also very troublesome. Under James II. (1437-60) there was some wise legislation improving the condition of the lesser tenantry and encouraging tillage. The marriage of James III. (1460-88) with the daughter of the King of Norway brought the Orkneys into the possession of Scotland in 1469. James IV. (1485-1513) married Margaret Tudor, the daughter of Henry VIII., thus opening the way to peace with England. But family quarrels with Henry VIII. and the renewal of the French alliance led to a Scottish invasion of England, which resulted in the defeat and death of James on Flodden Field in 1513. Under James V. (1513-42) the College of Justice, the Scottish supreme court, was established on the model of the Parlement of Paris in 1532. James's chief minister was Cardinal Beaton, the Archbishop of Saint Andrews, who played in Scotland the rôle of Cardinal Wolsey in England, but with greater success. After the death of James V., he directed the destinies of Scotland. Henry VIII.'s barbarous invasion, in which towns were burned, the country was laid waste, and all the inhabitants that resisted were slain, thwarted that monarch's design for a marriage between the infant Queen of Scotland and the heir to the English throne. For a time the same policy was continued by the Protector Somerset, and this so incensed the Scotch that Mary was sent to France to marry the Dauphin. With the assassination of Cardinal Beaton in 1546 the power of the Catholic Church in Scotland was over.

THE REFORMATION AND ITS CONSEQUENCES (1543-1688). James V., although he compelled the clergy to reform abuses, resisted the efforts of Henry VIII. to make him join the Reformation, but after his death Mary of Guise, the Queen mother, in vain attempted to compromise. In 1559 John Knox (q.v.) returned to Scotland and became the greatest power in effecting the Reformation. Urged by his fiery eloquence, many of the nobility organized against the bishops under the name of the Lords of the Congregation. They went through the land suppressing the mass, destroying images, and plundering the monasteries. The Regent secured French aid, but with the as-

sistance of Elizabeth the rebellious nobles more than held their own. Peace came in 1560 with the Treaty of Edinburgh, which provided for the withdrawal of both French and English forces, leaving Scotland to settle her own Church affairs. In that year the Reformation Parliament assembled and adopted a thoroughly Calvinistic Confession of Faith drawn up by John Knox, and established the Church on a democratic and Presbyterian basis. See **PRESBYTERIANISM**, section on *The Presbyterian Churches in Scotland*.

The subsequent history of Scotland until the Union is the story of its Church, the democratic government of which, like the Parliament in England, trained the people for political liberty. During the Civil War the Scots united with the Parliamentarians and by creating a diversion in the north divided the King's forces. The restoration of Charles II. was followed by the restoration of episcopacy and the bloody persecution of the Covenanters, who adhered to the Presbyterian faith. But the nation remained Presbyterian, and in 1689 the Scottish Parliament passed a bill of rights more radical than the English, and invited William to ascend the throne. In 1690 episcopacy was definitely abolished and Presbyterianism was restored to the position of a State religion. The frequent changes in religion were brought about by acts of Parliament, which was entirely under the King's control. A chief source of Parliamentary weakness lay in the growth of the committee system. As early as the fourteenth century business had been referred to two committees called the Lords of the Articles, chosen from the three estates. Consolidated by James V. into a single body, this committee obtained such power that by the sixteenth century Parliament met merely to confirm its decisions. In 1621 a change in the method of its appointment enabled the King to fill it with his partisans, and thus control Parliament. But in 1690 the committee of the Articles was abolished, and from that time until the Union Scotland had parliamentary rule.

THE UNION WITH ENGLAND. In consequence of the massacre of Glencoe in 1692, and of the hostile attitude of the English Parliament toward the Scottish colony at Darien, the Scottish Parliament echoed the popular feeling of hostility toward England. It met the English desire for union with the demand for free trade and equal rights in the colonies, and on being refused this it passed the Act of Security (1703), practically excluding the successor of Queen Anne from the Scottish throne, and providing for compulsory military training of every Scotsman. In retaliation the English Parliament passed several laws greatly restricting the trading privileges of the Scotch. For a year or two there was imminent danger that the Scots would proceed to extreme measures, but in 1707 the Parliament agreed to the Act of Union. Charges of bribery were made and the whole proceeding was execrated by the people of Scotland. As finally passed the act gave Scotland a representation of forty-five in the British House of Commons and sixteen in the House of Lords, the whole Scotch peerage electing the latter for the Parliamentary term of the British Parliament. Scotland received free trade and retained her own Church and laws. The debts of the two countries were consolidated.

The history of Scotland since the Union cannot be separated from that of Great Britain (q.v.). The most important change that has come over the country is its transformation from an agricultural to an industrial community. A disastrous change in the land tenure and population of the Highlands occurred as a result of the gallant participation of the clans in the Jacobite rebellion of 1745-46. The Highland language and customs were suppressed by law, and the tribal ownership of land was abolished. As a result the lords converted the common lands into sheep walks and deer parks, compelling the tribesmen to migrate, unless they wished to remain as tenants at will, under wretched conditions. These evils were only in part remedied by the Crofters Act of 1880.

SCOTLAND, CHURCH OF. See PRESBYTERIANISM.

SCOTLAND YARD. A building at the southeastern corner of Charing Cross, London, England, long famous as the headquarters of the Metropolitan Police Force. It derives its name from a palace assigned from the time of Edgar to Henry II. as the residence of the Scottish kings whenever they should desire to visit London. New Scotland Yard, the police headquarters since 1890, is on the Thames Embankment.

SCOTS GREYS. The oldest dragoon regiment in the British Army. It was raised in Scotland in 1683 and is mounted entirely on gray chargers. Throughout its history it has been one of the most distinguished regiments in the British service. The uniform differs from the other British dragoon regiments, in that bearskin bushes (q.v.) are worn instead of the dragoon helmet. Its present title is the Second Dragoons, Royal Scots Greys regiment of cavalry.

SCOTT, ALFRED (1849-). An American educator, born in Maumee, Ohio. He graduated at Yale in 1869, spent a year in graduate study at the University of Michigan, and in 1871-73 studied history at Berlin and Leipzig. From 1873 to 1875 he was instructor in German at the University of Michigan; became in 1876 an associate in history in the newly established Johns Hopkins University, where he organized and directed the seminary of American history. During this period he also assisted George Laneotti in collecting and arranging the material for his *History of the Constitution of the United States*. In 1883 he became professor of history and economics at Rutgers College, New Brunswick, N. J., and in 1890 succeeded Merrill E. Gates in the presidency of the institution.

SCOTT, CHARLES (1733-1813). An American soldier, born in Cumberland County, Va. He served as a non-commissioned officer under Braddock in 1755, was captain of the first company in the Revolutionary War raised south of the James, became a colonel in August, 1776, distinguished himself at Trenton, and in April, 1777, was made a brigadier-general. In 1780 he was taken prisoner at Charleston, and was not exchanged until the close of the war. Removing to Kentucky in 1785, he served as brigadier-general under General Saint Clair in 1791, and in 1791 was one of Wayne's officers at the battle of Fallen Timbers. He was Governor of Kentucky from 1808 to 1812.

SCOTT, CLEMENT (1841-1904). An English journalist and author, born in London, October 6, 1841, and educated at Marlborough School. He entered the War Office as clerk in 1860, and retired on a pension in 1877. He then joined the editorial staff of the *Daily Telegraph*, to which paper he had contributed dramatic criticisms since 1872. He subsequently became editor of a critical weekly called *The Free Lance*. He is the author of *Lays of a Londoner* (1882); *Lays and Lyrics* (1888); *Round About the Islands* (1886); *Pippa Land Papers* (1886); *Pictures of the World* (1894); *Among the Apple Orchards* (1895); and *Sisters by the Sea* (1897), all delightful sketches. He is author, or part author, of the following plays: *Diplomacy; The Viewage; Off the Line; The Cape Mail; Peril; The Crimson Cross; Obit; Tears, Idle Tears; and Sister*

Scott, William, an actor, is represented by *Stoicism* (1893), *Adaptation* (1893), and *Melancholy* (1893). His dramatic works include *From "The Belts" to "Kiln-Crocks"* (1896), *The Drama of Yesterday* (1897), *Eden* (1899), and *Ellen Terry* (1900).

SCOTT, DAVID (1806-49). An English historical and portrait painter, etcher, engraver, and author, born at Edinburgh. He exhibited his first picture, the "Hopes of Early Genius Dispelled by Death," at the Scottish Academy in 1828. In 1832 he visited Italy, making a short stay in Paris, where he was much impressed by the works of David, and from there going to Rome, he returned to Edinburgh in 1834. Although an artist of undoubted merit, he failed to win the appreciation of the public. His feverish and eager haste to portray his ideas hampered him in his use of color, and one must look to his work as a draughtsman to find the true interpretation of his genius. Among his designs are his *Monographs of Man* (1831), a set of six remarkable etchings somewhat resembling those of Max Klinger, and drawn in delicate outline on copper, and his designs for Coleridge's *Ancient Mariner*, begun in the same year, published in London (1837), a series characterized by vivid imagination and great power. Most of his paintings are in private collections in Scotland. The National Gallery of Edinburgh possesses the "Vintage" and "Ariel and Caliban." Other paintings include: "Achilles Addressing the Muses of Patroclus," Sunderland Art Gallery; "Vasco da Gama," Trinity House, Leith; the "Descent from the Cross," Smith Institute, Stirling; and portraits of Dr. John Brown and of Emerson (Public Library, Concord, Mass.). Scott's last works were the 40 illustrations to *Pilgrim's Progress*, and a series of 18 beautiful designs to Nichol's *Architecture of the Heavens*, both issued after his death. Consult W. B. Scott, *Memoir of David Scott* (Edinburgh, 1850).

SCOTT, DUNCAN CAMPBELL (1862—). A Canadian poet, born in Ottawa, Ontario. He was educated at Stanstead Wesleyan College. Having entered the Canadian civil service as a third-class clerk in 1879, he rose rapidly to the position of chief clerk and accountant (1893). His published verse comprises *The Magic House* (1893) and *Labor and the Angel* (1898). *The Village of Viger* (1896) is a collection of ten short stories of Canadian country life. See CANADIAN LITERATURE.

SCOTT, EDWARD JOHN LONG (1840—). An English scholar and author, born in Bridgewater, Somerset. He graduated at Lincoln College, Oxford, in 1862, in 1863 entered the manuscript department of the British Museum, and in 1888 was appointed keeper of the manuscripts and Egerton librarian. His publications include: *Introduction to Reprint Eikon Basilike* (1880); a translation in verse of the *Elogues of Vergil* (1884); *Private Diary of Shakespeare's Cousin, Thomas Greene, Town-Clerk of Stratford-upon-Avon* (1882); *William Harvey's Original Lectures on the Circulation of the Blood* (1886).

SCOTT, SIR GEORGE GILBERT (1811-78). An English architect. He was born at Gawcott, Buckinghamshire, and in 1827 was articled to a London architect. Converted by the writings of Pugin, he became a leading spirit of the Gothic revival, and was employed in restoring

many of the old English cathedrals, including Westminster Abbey and Ely Cathedral, and in building churches. Prominent among his secular edifices are the Albert Memorial, and the ministerial buildings of the War, Foreign, Home, and Colonial offices. He became a member of the Royal Academy in 1861, and was made professor of architecture, his collection of lectures being published under the title *Mediæval Architecture* (2 vols., London, 1879). He won the gold medal of the Royal Institute of British Architects in 1859, was president of that body (1873-76), and was knighted in 1872. He died in South Kensington, March 27, 1878, and was buried in Westminster Abbey. Consult his *Recollections* (London, 1879).

SCOTT, HUGH LENOX (1853—). An American soldier, born at Danville, Ky. He graduated at West Point in 1876, and entered the cavalry. He saw service in Indian campaigns and was assigned to Western posts. In 1892 he enlisted an Indian troop in the Seventh Cavalry, and commanded it until all Indian troops were mustered out of service in 1897. In the war with Spain he was an adjutant-general in the First Army Corps, holding that office until February, 1899. He then served for fourteen months as adjutant-general of the Department of Havana, after which he became successively assistant adjutant-general, and adjutant-general of the Department of Cuba. Besides reports on the Plains Indians, he wrote a monograph on the sign language of the Plains Indians, published in the *Proceedings of the Folk Lore Congress of the World's Fair at Chicago in 1893*.

SCOTT, HUGH STOWELL (1862-1903). An English author, born at Newcastle-upon-Tyne. He was better known by his pseudonym, Henry Seton Merriman. He published *Phantom Future* (1899); *Suspense* (1890); *Prisoners and Captives* (1891); *Share of the Lamp* (1892); *With Edged Tools* (1894); *Grey Lady* (1895); *The Sowers* (1896); *In Kedar's Tents* (1897); *Floisam* (1898); *Roden's Corner* (1898); *Isle of Unrest* (1900); *Elret Glore* (1901); *The Vultures* (1902).

SCOTT, IRVING MURRAY (1837-1903). An American shipbuilder and iron-master, born in Hebron Mills, Baltimore County, Md. He entered the employ of the Union Iron Works of San Francisco as draughtsman in 1858. He designed much mining machinery, notably that for the Comstock mine. On his suggestion as general manager the Union Iron Works added in 1884 shipbuilding to the construction of mining machinery, and built for the United States Government the *Charleston, Oregon, San Francisco, Olympia, Wisconsin, and Ohio*. He was a trustee of Leland Stanford, Jr., University, and a prominent figure in the Republican Party of the Pacific Coast, his name being urged for the Vice-Presidential nomination in 1900.

SCOTT, JOHN MORIN (1730-84). An American patriot, soldier, and legislator, born in New York. He graduated at Yale in 1746, became prominent as a lawyer in New York, and was conspicuous as an early opponent of the British Ministry, being one of the organizers of the Sons of Liberty. In 1775 he became a member of the New York General Committee, served in the Provincial Congress in 1775-76, and, as brigadier-general, took part in the battle of Long Island. In 1777 he resigned his commission, and subse-

quently served as Secretary of State of New York in 1777-79, and as a member of the Continental Congress in 1780-83.

SCOTT, JULIAN (1846-1901). An American battle and figure painter, born in Johnson, Vt. He served in the Federal Army from 1861 until 1863, and afterwards studied art in the National Academy of Design, and under Lentze. He was elected an associate of the Academy in 1871. His works, mainly taken from Civil War subjects, include: "Rear Guard at White Oak Swamp" (Union League Club, New York City); "Capture of André" (1876); and "In the Cornfield at Antietam" (1879).

SCOTT, or SCOT, MICHAEL (c.1175-c.1234). A famous mediæval scholar, who probably belonged to a family on the Scottish border. He received his education at the universities of Oxford, Paris, Bologna, and Palermo, and spent most of his later life at the Court of the Emperor Frederick II, in Sicily, where he was one of the most famous of the group of scholars collected around that enlightened monarch. He was in high favor with both Honorius III, and Gregory IX, who gave him various benefices, probably in Italy. In 1230 he visited Oxford, taking with him works of Aristotle and various commentaries. There are very few other facts about his life which can be regarded as authentic. Of his printed works, the best known are *Liber Physiognomicæ Magistri Michaelis Scoti* and *Mensa Philosophica*, translated into English and frequently printed under the title of *The Philosopher's Banquet*. In addition he made various translations of Aristotle's works and the Arabic commentaries. He also wrote works on astronomy and alchemy. As was so often the case in the Middle Ages with famous scholars, Michael Scott became known soon after his death as a magician, and as such he has figured extensively in literature. Sir Walter Scott has caused the action of his *Lay of the Last Minstrel* to centre about the traditional grave of Michael at Melrose Abbey. Consult Brown, *Life and Legend of Michael Scot* (Edinburgh, 1897).

SCOTT or SCOT, REGINALD (c.1538-99). A writer against witchcraft, son of Richard Scot of Scots Hall at Smeeth, in Kent. In 1555 he entered Hart Hall, Oxford, but left without a degree. He passed his life in Kent as a country gentleman. His famous work, *The Discoverie of Witchcraft* (1584), was designed to demonstrate the absurdity of the prevalent belief in witchcraft. Besides being full of learning, it is marked by passages of sound sense and humane feeling, qualities that naturally excited the antipathy of King James, who replied in his *Dæmonology* (1597). On coming to the English throne, James ordered Scott's book to be burned. Scott also published a valuable book entitled *A Perfect Platform of a Hop Garden* (1574). The *Discoverie* was edited by Brinsley Nicholson (London, 1886).

SCOTT, RICHARD WILLIAM (1825-). A Canadian statesman, born in Prescott, Ontario. He was admitted to the bar in 1848, and from 1857 to 1863 sat in the Canadian Assembly. In 1867-73 he was a member of the Ontario Assembly, of which he was elected Speaker in 1871. From 1872 to 1873 he was Commissioner of Crown Lands, and from 1873 to 1878 Secretary of State. He was acting Minister respectively of

Finance in 1874, of Inland Revenue in 1875-76, and of Justice in 1876. He carried through the separate Catholic school law of Ontario Province, and the Canada local option temperance act, generally styled the "Scott act". In 1874 he was elected to the Dominion Senate, and in 1896 became Secretary of State.

SCOTT, ROBERT (1811-87). An English clergyman and scholar. He was born at Bondleigh in Devonshire, and educated at Shrewsbury School and at Christ Church, Oxford, where he won the Craven and Ireland scholarships. He took his degree in 1833 and won a fellowship at Balliol two years later. Meantime, in 1831, he had taken holy orders, and held various ecclesiastical preferments until 1854, when he was elected master of Balliol in opposition to Jowett, who was to be his successor. In 1870 he accepted the deanery of Rochester and held it until his death. Scott's name is most widely known by his joint authorship, with H. G. Liddell, of the great Greek-English lexicon, whose appearance in 1843 was epoch-making for English scholarship. For the next forty years Liddell and Scott worked diligently at revision and addition, until the seventh edition (1883) was practically an original work, though the first had been based on the German lexicon of Passow.

SCOTT, ROBERT HENRY (1833-). A British meteorologist, born in Dublin, Ireland, and educated there at Trinity College, and in Berlin and Munich. He was keeper of the mineralogical museum of the Royal Dublin Society from 1862 to 1867, when he became director of the British Meteorological Office, a post which he held until 1900. He wrote: *Volumetric Analysis* (1862); *Weather Charts and Storm Warnings* (1876; 2d ed. 1887); and *Elementary Meteorology* (1883).

SCOTT, ROBERT KINGSTON (1826-1900). An American soldier and politician, born in Armstrong County, Pa. In 1861 he was chosen lieutenant colonel of the Sixty-eighth Ohio Regiment, and next year was promoted colonel. He fought at Fort Donelson, Shiloh, and Corinth, was in the campaign against Vicksburg, was taken prisoner near Atlanta in 1864, but was shortly afterwards exchanged, and served during the remainder of the war with General Sherman. From 1865 until 1868 he was assistant commissioner in South Carolina of the Freedmen's Bureau. In the latter year he was elected Governor of the reconstructed State, and in 1870 was re-elected for the ensuing term of two years. His administrations were very corrupt, and during them the State debt increased about \$13,000,000, although few public improvements were made. In his second administration Ku Klux disorders became so numerous in some parts of the State that President Grant, under the authority conferred by the Enforcement Act of April 20, 1871, suspended the writ of habeas corpus in some of the counties, and many of the offenders were tried by the Federal courts. In 1877 Scott settled in Napoleon, Ohio. In 1881 he was tried for shooting and killing W. G. Dury, but was acquitted on the plea that the shooting was accidental. For accounts of his administrations in South Carolina, consult: Pike, *The Prostrate State* (New York, 1874); and *Why the Solid South?* by Hilary A. Herbert and others (Baltimore, 1890).

SCOTT, JOHN (1707-1783). An English Bible commentator. He was the son of a minister of the church of Scotland. He began preaching in 1730. Afterwards he held various livings in Devon, Cornwall, Essex, Norfolk, and Suffolk. His best sermons are "Happy the Meek" and "Be Still, and be Wise." Consult his *Poems, Devotional and Moral* (1773). He is also translated into English verse *The Table of Codes* (1741) and *The Book of Job* (1771). His sister, ELIZABETH SCOTT (1708; 76), likewise wrote many hymns, several of which are still used. To her belongs "All hail, Incarnate God."

SCOTT, THOMAS (1747-1821). An English Bible commentator. He was born at Braytoft, Lincolnshire, and spent the early years of his life as a grazier. In 1773 he was ordained priest and became curate in Buckinghamshire; he succeeded John Newton, curate of Olney, in 1781; was chaplain to the Lock hospital in 1785; and rector of Aston Sandford in 1803. Among his publications are: *The Force of Truth* (1779); *The Articles of the Synod of Dort*, translated (1818); and his commentary on the Bible (1788-92), which had immense circulation and influence in its day. His collected works appeared in 10 volumes (1823-25), and his *Letters and Papers* (1824), edited by his son, who also wrote his *Life* (1822), including in it a valuable autobiographical fragment.

SCOTT, THOMAS ALEXANDER (1824-81). An American railroad manager, born at Loudon, Pa. Entering the service of the Pennsylvania Railroad in 1851, he was rapidly promoted, and in 1859 became vice-president. In 1861 he was appointed by President Lincoln Assistant Secretary of War, in which capacity he rendered invaluable services by reorganizing the entire system of transportation. Returning to the service of the Pennsylvania Railroad, he inaugurated the policy of securing control of Western railway lines for operation in connection with the Pennsylvania system. He was president at different times of various railroad lines, and from 1874 until a short time before his death was president of the Pennsylvania Railroad.

SCOTT, SIR WALTER (1771-1832). A famous British novelist and poet. He was born in Edinburgh, August 15, 1771, of an old border family, the Scotts of Harden, an offshoot from the House of Buccleuch. Although he grew to be healthy, as a child Scott was sickly; but he grew to be very tall, with bright eyes, a sturdy chest, and powerful arms, and he was thought good-looking. His childhood was passed for the most part at Sandy Knowe, the farm of his grandfather, in Roxburghshire. His early familiarity with the ballads and legends then floating over all that part of the country probably did more than any other influence to determine the sphere of his future literary activity. Between 1778 and 1783 he attended the high school of Edinburgh, where, despite occasional flashes of talent, he shone considerably more as a bold, high-spirited boy, with an odd turn for story-telling, than as a student. In 1783 he began attending the University of Edinburgh, where he continued about two years, as would seem, not greatly to his advantage. Afterwards, at the height of his fame, he was content to spend with deep regret of his neglect of early opportunities. But, though leaving college scantily furnished with the knowledge formally

taught there, he had been hiving up, in his own way, stores of valuable though unsorted information. From his earliest childhood onward he was an insatiable reader; and of what he either read or observed he seems to have forgotten almost nothing. He was a fairly good Latinist; of Greek he knew nothing, but he acquired a serviceable knowledge of French, Italian, Spanish, and German.

In music he showed no talent. In 1786 he was articled apprentice to his father; in 1788 he began to study for the bar, to which he was called in 1792. In his profession he had fair success, and in 1797 he married Charlotte Margaret Carpenter, the daughter of a French refugee, named Jean Charpentier. Toward the end of 1799, through the interest of his friends Lord Melville and the Duke of Buccleuch, he was made Sheriff depute of Selkirkshire, an appointment which brought him £300 a year, with not very much to do for it. Meantime, in a tentative and intermittent way, his leisure had been occupied with literature, which more and more distinctly announced itself as the main business of his life. Excepting a disputation on being called to the bar, his first publication, a translation of Bürger's ballads *Lenore* and *The Wild Huntsman*, was issued in 1796. In 1799 appeared his translation of Goethe's drama of *Götz von Berlichingen*; and at this time he was writing for Monk Lewis the fine ballads, *Glengulfas*, the *Eric of Saint John*, and the *Grey Brother*. In 1802 Scott published the first two volumes of his *Border Minstrelsy*, which were followed in 1803 by a third and final one. This work, the fruit of those "raids"—as he called them—over the border counties, in which he had been wont to spend his vacations, won for him at once prominence among the literary men of the time. In 1804 he issued an edition of the old poem *Sir Tristram*, admirably edited and elucidated by valuable dissertations. Meantime, *The Lay of the Last Minstrel* had been in progress, and on its publication in 1805 Scott found himself the most popular poet of the day. During the next ten years, besides a mass of miscellaneous work, the most important items of which were elaborate editions of Dryden (1808) and of Swift (1814), including in each case a memoir, he gave to the world the poems *Marmion* (1808); *The Lady of the Lake* (1810); *The Vision of Don Roderick* (1811); *Rokby* (1813); *The Bridal of Triermain* (1813); and *The Lord of the Isles* (1815). The enthusiasm with which the earlier of these works were received somewhat abated as the series proceeded. The charm of novelty was no longer felt, and the poetry had deteriorated. Moreover, in the bold outburst of Byron, with his deeper vein of sentiment and concentrated energy of passion, a formidable rival had appeared. All this Scott distinctly noted, and after what he felt as the comparative failure of *The Lord of the Isles* in 1815, he published, with the trivial exception of the anonymous *Harold the Dauntless* (1817), no more poetry. But already in *Waverley*, or *Tis Sixty Years Since*, which appeared without his name in 1814, he had achieved the first of a new series of triumphs. *Guy Rannering* (1815), *The Antiquary* (1816), *Old Mortality*, *The Black Dwarf* (1817, really 1816), *Rob Roy* (1818), and *The Heart of Midlothian* (1818) rapidly followed. The remainder of the famous group known as the Waverley novels form the most

splendid series of historical portraits in any language. *The Bride of Lammermoor* (1819); *The Legend of Montrose* (1819); *Iranahoe* (1820); *The Monastery* (1820); *Kenilworth* (1821); *Quentin Durward* (1823); *The Talisman* (1825)—these are among the most enduring of those great stories which enchanted Europe and had an immense influence on the development of fiction.

Scott was now at the height of his fame and prosperity. He was living at Abbotsford, the 'romance in stone' he had built for himself in the border country which he loved. There he entertained with princely hospitality admirers of many types. In 1820 he was created a baronet. But his fortunes, secure as they seemed, were built upon insecure foundations. In 1805 Scott's income, as calculated by his biographer, was about £1000 a year, irrespective of what literature might bring him, a competency shortly increased, on his appointment to a clerkship of the Court of Session, by £1300. But what was ample for all prosaic needs seemed poor to Scott's imagination. In 1805, lured by the hope of immense profits, he secretly joined James Ballantyne, an old schoolfellow, in a large printing business in Edinburgh. To this, a few years afterwards, a publishing business was added, under the nominal conduct of John Ballantyne, a brother of James; Scott, in the new adventure, becoming, as before, a partner. Gradually the affairs of the two firms became complicated with those of the great house of Constable & Co., in the sudden collapse of which in 1826 the Ballantynes were involved to the extent of £120,000. Compromise with their creditors would have been easy. But Scott regarded the debt as personal. "If I live and retain my health," said Scott, "no man shall lose a penny by me." And, somewhat declined as he now was from the first vigor and elasticity of his strength, he set himself to liquidate by his pen this large sum. The stream of novels now flowed swiftly. *A History of Napoleon*, in eight volumes, was undertaken and completed, with much other miscellaneous work; and within a space of two years Scott had realized for his creditors nearly £40,000. A new and annotated edition of the novels (begun in 1829) was issued with immense success; and there seemed every prospect that, within a reasonable period, Scott might again face the world, as he had pledged himself to do, owing no man a penny. In this severe labor he broke down. In 1830 he was smitten with paralysis, from which he never thoroughly rallied. It was hoped that the climate of Italy might benefit him. The Admiralty placed at his disposal a man-of-war on which he took a Mediterranean voyage, touching at Malta and Naples. But in Italy he pined for the home to which he returned only to die. At Abbotsford, on September 21, 1832, he passed away, with his children round him. On the 26th he was buried beside his wife (d. 1826) in the beautiful ruins of Dryburgh Abbey. By the sale of copyrights, all Scott's debts were liquidated in 1847.

In regard to Scott's poetry there is now little difference of opinion. Its genuine merits continue to secure for it some part of the popular favor with which it was at first received. Deficient though it be in certain of the higher and deeper qualities, and in finish, it is admirable in its frank abandon, in its boldness and breadth of

effect, its succession of clear pictures, and its rapid and fiery movement. Scattered here and there are little snatches of ballad and song scarcely surpassed in our language. As a novelist Scott had some shortcomings. With the artistic instinct granted him in largest measure, he had little of the artistic conscience. Writing offhand, he would not watch his work as it proceeded. Hence he is an exceedingly irregular writer; many of his works are in structure most lax and careless, and some of the very greatest of them are marred by occasional intrusions of obviously inferior matter. Yet it may be doubted whether in mass and stature Scott is quite reached by any other English novelist. Of Scott's novels, those dealing most intimately with Scotch life are the best. As a force, Scott's influence has been immense. He discovered the historical novel and from him proceed the countless tales of national life since written in Great Britain, throughout Europe, and in the United States. Scott, too, gave to fiction that encyclopaedic character since exemplified in Balzac, Dickens, and Thackeray. He did more than all other men of his time to enlarge our vision, by extending it over wide stretches of history. He also revolutionized the current conceptions of history as a body of dry facts. His logical successor was Macaulay.

Scott's miscellaneous prose works, comprising essays on the novelists, etc., were collected in 1827, in 1834-36, and in 1841. His poems and novels exist in many editions. The following list includes such works as have not already been mentioned: *Apology for Tales of Terror* (12 copies privately printed, 1799); "Ballads," in Lewis's *Tales of Wonder* (1801); *Ballads and Lyrical Pieces, from Border Minstrelsy and Tales of Wonder* (1806); *Abstract of Epythia Saga*, in Jameson's *Northern Antiquities* (1811); *Chivalry and Drama*, in Supplement to *Encyclopaedia Britannica* (1814); *Introduction to Border Antiquities* (1814-17); *The Field of Waterloo* (1815); *Paul's Letters to His Kinsfolk* (1815); *The Search After Happiness, or the Quest of Sultan Solimann*, and Kemble's Address on the *Sole Room* (1817); *Description of the Regatta of Scotland* (1819); *The Visionary by Somnambulus*, a political satire, republished from the *Edinburgh Weekly Journal* (1819); *The Abbot* (1820); biographies in Ballantyne's *Novelists* (1821); *Account of George III.'s Coronation* (1821); *The Pirate* (1822); *Halidon Hill* (1822); *Macduff's Cross*, in Joanna Baillie's *Poetical Miscellanies* (1822); *The Fortunes of Nigel* (1822); *Peril of the Peak* (1822-23); *Saint Roman's Well* (1824); *Redguntlet* (1824); *Tales of the Crusaders; The Betrothed* (1825); *Thoughts on the Proposed Change of Currency* (1826); *Woodstock, or the Cavalier; a Tale of 1651* (1827); *Chronicles of the Canongate; The Two Drovers; The Highland Widow; The Surgeon's Daughter* (1827); *Tales of a Grandfather* (1 series, 1828, 1829, 1830, 1830); *Chronicles of the Canongate*, second series; *Saint Valentine's Day, or the Fair Maid of Perth* (1828); "My Aunt Margaret's Mirror," "The Tapestry Chamber," and "The Laird's Jock," in the *Keepsake* for 1828; *Religious Discourses, by a Layman* (1828); *Ann of Geirstein* (1829); *History of Scotland*, in Lardner's *Cabinet Encyclopaedia* (1830); "Letters on Demonology and Witchcraft," in Murray's *Family Library* (1830); *House of Aspen*, in the *Keepsake*

1830; *Deutsche Dichtung* (Anchondria, or German Literature, 1830); *Essays on Ballad Poetry* (1830); *Tales of My Landlord* (4th series); *Count Robert of Paris*; *Castle Dangerous* (1862).

For the facts of his life, consult: Lockhart's *Life* (London, 1838; often reprinted; best edition by Pollard, 1900); *Scott's Journal* (Edinburgh, 1890); and *Familiar Lessons* (ib., 1893); and R. H. Hutton, in "English Men of Letters"

(New York, 1879). For Scott's influence on the continent, consult Louis Maigron, *Le roman historique* (Paris, 1898); and Gutschall, *Die deutsche Nationalbibliothek des 19ten Jahrhunderts*, vol. iv. (Breslau, 1881). For estimates, consult: Carlyle's "Essay," in *Critical and Miscellaneous Essays* (London, 1840); Bagehot, in *Literary Studies* (London, 1895); and Stevenson's "Gossip on Romance," in *Memoirs and Portraits* (London, 1891); also Crockett, *The Scott Country* (New York, 1902). See also NOVEL; ROMANTICISM; ENGLISH LITERATURE.

SCOTT, WILLIAM AMASA (1862—). An American economist, born in Clarkson, Monroe County, N. Y., and educated at the University of Rochester, with a post-graduate course in Johns Hopkins University (1890-92). He had taught political economy in the University of South Dakota from 1887 to 1890, and, on leaving Johns Hopkins, where he had acted as instructor in history, became assistant professor of economics in the University of Wisconsin, was titular professor from 1897 to 1900, and then director of the School of Commerce and professor of economic history and theory. His publications include *Reputation of State Debts* (1893) and *Reports of State Committees of Wisconsin*.

SCOTT, WILLIAM BELL (1811-90). A Scotch poet and painter, born at Saint Leonard's, Edinburgh. He was a son of Robert Scott, the engraver, and a younger brother of David Scott (q.v.), the distinguished painter. He was educated at the Edinburgh High School, studied art at the Government academy and in the British Museum, and worked with his father at engraving. In 1837 he went to London and began his career as etcher and painter. In 1844 he was appointed master of the Government schools of design at Newcastle-on-Tyne, a post which he occupied with distinction till 1864. In the meantime he had executed a series of large pictures for Sir Walter Trevelyan at Wallington Hall, taking his subjects from border history and legend; and a few years later he also painted a series of designs from the *King's Quhair* for the stairway at Penkill Castle in Perthshire. His last years were passed at Chelsea, near his intimate friend D. G. Rossetti (q.v.), and at Penkill Castle with another friend, Miss Boyd. Among Scott's published designs is *William Blake: Etchings from His Works* (1878). On art or artists he wrote a *Memoir of David Scott* (1850); *Albert Durer: His Life and Works* (1869); *The British School of Sculpture* (1872); *Our British Landscape Painters* (1872); *Murillo and the Spanish School* (1873); and works on the modern schools in France, Belgium, and Germany. His own illustrations added to the charm of these books. Scott began writing verse while living in Edinburgh. He was strongly under the influence of Blake and Shelley and later he came under the spell of Rossetti. His

finest poems are contained in *Ballads, Studies from Nature, Sonnets*, etc. (1875), and in *A Poet's Harvest Home* (1882). A love for mysticism is most marked in *The Year of the World* (1846). After his death there appeared, under the editorship of W. Minto, *Autobiographical Notes* (London, 1892), interesting reminiscences of fifty years, particularly of Rossetti and the Pre-Raphaelites (q.v.).

SCOTT, WILLIAM BERRYMAN (1858—). An American geologist, born in Cincinnati, and educated at Princeton (class of 1877) and at the University of Heidelberg. Upon his return to America he was appointed professor of geology and paleontology at Princeton. The Princeton geological expeditions in the West and in Patagonia were under his lead and he made valuable additions to the geological and ornithological collections of the university. Besides many valuable monographs, he wrote *An Introduction to Geology* (1897).

SCOTT, WINFIELD (1786-1866). A distinguished American soldier. He was born near Petersburg, Va., of Scottish ancestry, June 13, 1786; attended William and Mary College for a time; and was admitted to the bar in 1806. In 1808, however, he abandoned the legal profession and accepted an appointment as captain of light artillery. While stationed at Natchez, in 1810, he was court-martialed for accusing his superior officer, General Wilkinson, of complicity in the conspiracy of Aaron Burr, and was temporarily suspended from the army. Upon the outbreak of the War of 1812, he was appointed lieutenant-colonel and sent to the Canadian frontier. He crossed with his regiment to Queenstown, where the American troops were at first successful, but the British troops being reinforced, the Americans were repulsed with heavy loss and Scott was taken prisoner. In the following year he was exchanged and was then appointed adjutant-general with the rank of colonel. During the same year he was wounded by an explosion of a powder magazine after the attack on Fort George. In 1814 he was promoted to the rank of brigadier-general. On July 5th he fought and won the battle of Chippewa, and on the 25th fought in the battle of Lundy's Lane (q.v.), in which he was twice wounded, the last time severely. He declined the appointment of Secretary of War at the close of hostilities, and was raised by Congress to the rank of major-general. He then prepared a set of extensive general regulations for the army, which was the first complete manual of military tactics prepared in the United States.

In 1841 he was appointed commander of the United States Army to succeed General Macomb. In 1847 he was given the chief command of the United States Army in Mexico, and on March 9th landed a force of 12,000 men at Vera Cruz, at once investing and bombarding the city, which surrendered on the 26th. On April 18th he carried the heights of Cerro Gordo, and on May 15th entered Puebla, where he waited for reinforcements. On August 19-20th he won the brilliant victories of Contreras and Churubusco. These were soon followed by the sharp and sanguinary battles of Molino del Rey and Chapultepec on the 8th and 13th of September respectively. On September 14th, with less than 8000 soldiers, he entered the City of Mexico and occupied the

national palace. (See MEXICAN WAR.) General Scott returned from the war with great fame as a soldier, and in 1852 was nominated as the Whig candidate for the Presidency, but carried only four States. In 1855 the office of lieutenant-general was revived by Congress in order that it might be conferred by brevet on General Scott. Increasing age and infirmity prevented him from taking active command of the army during the Civil War, and in October, 1861, he retired from active service. Subsequently he visited Europe and afterwards settled at West Point, where he died May 29, 1866. His autobiography was published in two volumes at New York in 1864.

Consult the biography by Mansfield (New York, 1852), and that by Headley and Victor (ib., 1861). The latest and best is that by Wright (ib., 1894) in the "Great Commanders Series."

SCOTT'DALE. A borough in Westmoreland County, Pa., 35 miles southeast of Pittsburg, on branches of the Pennsylvania and the Baltimore and Ohio railroads (Map: Pennsylvania, B 31). It has large coal-mining and coke interests, and iron-working establishments. It manufactures also flour and lumber products. Population, in 1890, 2693; in 1900, 4261.

SCOTTISH ACADEMY, ROYAL. An institution devoted to painting, sculpture, and the encouragement of the fine arts, formed at Edinburgh, Scotland, in 1826, and incorporated by royal charter in 1838. It was modeled after the Royal Academy of London, and in the early years of its existence occupied a range of galleries in the building of the Royal Institution, in which its annual exhibitions were then held. In 1854 the National Gallery, a building to be devoted to the fine arts, was completed and provision was made for the exhibitions of painting and sculpture of the Royal Scottish Academy, which are annually held there. Accommodation is also afforded in the building for the schools of the Academy.

SCOTTISH GAELIC LITERATURE. Throughout the Old Irish period and most of the Middle Irish, the Gaelic countries may be said to have had a common literary tradition. Inter-course was easy between the two halves of the Gaelic world and the bards passed freely back and forth. The scenes of ancient sagas like the *Longes Mac n-Uisnig* were laid on both sides of the Irish Sea, and the hero-tales of Cu Chulainn and of the Fenians were current in the Scottish Highlands. Unfortunately, the early monuments of Scottish Gaelic are very scanty. The *Book of Deir*, a Latin Gospel-book of the ninth century, contains a Gaelic passage which corresponds strictly to Old Irish; and certain later entries in the same manuscript show that the language of the eleventh and twelfth centuries still stood very near to the Irish of Ireland. A considerable number of Middle Irish manuscripts are preserved in the libraries of Scotland.

Not until the sixteenth century—the time, roughly speaking, of the Protestant Reformation—did the language and literature of Scotland have an independent development. The beginning is marked by *The Book of the Dean of Lismore*, a manuscript collection of poems made in 1512 and containing much valuable Ossianic material. Even in the Dean's Book some poems

are rather Irish than Scottish. The first printed work was Bishop Carsewell's translation of John Knox's liturgy (1567), and a great part of the Highland literature ever since, like that of modern Wales, has been theological in character. There have not been lacking secular poets, however, the successors of the ancient Irish bards whose name they still preserved. In the seven-teenth century the most famous were Mary MacLeod and John Macdonald; in the eighteenth Alexander Macdonald, Robert Mackay (Rob Donn), Dugald Buchanan, Duncan Ban MacIntyre, and William Ross; and in the early nineteenth Allan MacDougall and Ewen MacLachlan were of special note.

The portion of Gaelic literature that has been most widely known and discussed—and at the same time most generally misunderstood—is the Ossianic poetry. (See MACPHERSON, JAMES.) The works of Macpherson and his followers are utterly unlike the real Ossianic literature of both Scotland and Ireland. But these writers rendered a real service to the Gaelic literature which they represented. They made it known to the literary world abroad, and they gave the impulse to the collection of popular poetry at home. During the last hundred years or more a large mass of both ballads and folk-tales has been printed, and the work of collection is still going on. Among those who have labored thus to preserve the national literature the first place belongs undoubtedly to J. F. Campbell ofIslay.

BIBLIOGRAPHY. For the *Book of Deir*, see Dr. Stuart's edition (Edinburgh, 1862). Compare further Whitley Stokes, *Goidelicæ* (London, 1872), and J. Strachan in the *Proceedings of the Gaelic Society of Inverness* (vol. xix.). *The Book of the Dean of Lismore* was edited by Thomas MacLachlan (Edinburgh, 1862) and again more correctly by Alexander Cameron, *Reliquia Celticae* (ib., 1892). The best poems of the modern bards have been printed in the anthology of John Mackenzie, *Sar Ohoir nam Bard Gorbach* (Glasgow, 1865). On the Ossianic controversy see the admirable articles of L. Christian Stern in the *Zeitschrift für Vergleichende Literaturgeschichte* (vol. viii.). Campbell's great collections are entitled *The Popular Tales of the West Highlands* (1860-62) and the *Leabhar na Feinne* (1872). The series entitled *Waifs and Strays of Celtic Tradition* contains many of the most valuable contributions of later collectors. Alexander Carmichael's *Carmina Gadelica* (1900) is the most important work in this field since Campbell. Much of the best Gaelic prose and verse of the nineteenth century was contributed to such periodicals as *An Gaidheal*, the *Cuirtear nan Gleann*, and the *Teuchlaire Gaidhealach*. The Gaelic works of Norman Macleod have been collected under the title *Caraid nan Gaidheal* (new ed., Edinburgh, 1899-1901). On the literary history two general treatises may be cited: Blackie, *The Language and Literature of the Scottish Highlands* (Edinburgh, 1870), and MacNeill, *The Literature of the Highlanders*. See SCOTTISH LANGUAGE AND LITERATURE; CELTIC LANGUAGES; IRISH (GAELIC) LITERATURE.

SCOTTISH LANGUAGE AND LITERATURE. By the Scottish language is meant the English dialect once cultivated in Scotland and now spoken in remote districts. When, in the

the ordinary English becomes again a cultivated language after the linguistic disturbance following the Norman Conquest, it falls into two clearly marked dialects: The southern (of the Thames), the midland (the central portions of England), and the northern, spoken and written from the Humber to the north as far as the Teutons had settled in Scotland. For England the midland dialect, the language of the Court, soon became the standard. But Scotland in the meantime had won her independence at Bannockburn (1314), and had established her own government, which she maintained till the union of the crowns by the accession of James to the English throne (1603). More precisely, then, the Scottish language is the cultivated language of Scotland from about 1310 to 1603. From the standard English of England it differed originally in sounds, in spelling, and in syntax. And these differences subsequently increased, owing to the hostility between the two countries. The Scottish dialect also came under the influence of the Gaelic and the Kymric, from which many words were taken. It was in the north, too, that the Norsemen, settling in the ninth and tenth centuries, influenced in vocabulary and perhaps in syntax the speech of the people by whom they were absorbed. Moreover, Scotland was for a long period in close alliance with France. Scotchmen went to France rather than to England to complete their education, and they entered the French service in large numbers. As a result there was introduced into the Scotch dialect a body of French words not found in the literature south of the Tweed. To the vernacular of Scotland as a cultivated language the Reformation proved a death blow: for it put an end to the friendship with Catholic France, and eventually brought to the cottage of the Scotch peasant the Bible written in the standard English of the south.

Except for some fragments of minstrelsy and the romances which in origin may go back to the mysterious Thomas the Rhymer, Scottish vernacular literature begins with John Barbour, Archdeacon of Aberdeen, whose *Bruce* (1375) appeared while Chaucer, then in his prime, was showing the artistic possibilities of the new English as spoken in London. Barbour's poem, narrating the exploits of Robert Bruce from his wanderings as an outlaw in the mountains to his victory at Bannockburn and then on to Irish and other wars, gave stirring expression to the Scotch feeling of independent nationality. Andrew Winton, prior of Saint Serf's Inch, in Loch Leven, followed Barbour with a metrical history called the *Orignalliche Chronykil of Scotland* (about 1424). Though less exultant in its patriotism than the *Bruce*, this poem is nevertheless very significant as a plain narrative of events in Scotland founded on the best traditions and authorities at the command of the author. Literature had thus discovered the hero and the history of Scotland. Patriotic themes were continued by others, especially by Henry the Minstrel or Blind Harry (toward the close of the fifteenth century), who enriched Barbour's poem with *William Wallace*, pervaded with the spirit of freedom. Oddly enough, Scotch verse had already come under the influence of Chaucer. Patriotism proved weaker than the sense for form and beauty. The first and best of the Chaucerians was James the First, who ruled Scotland from 1420 to 1437. For

nineteen years he had been held in captivity by the English, and while in the Tower of London he is said to have composed *The Kingis Quair* (i.e. *The King's Book*), an allegorical poem in the manner of the romance poems of Chaucer. In previous Scotch poetry the octosyllabic rhyming couplet had usually been employed. James adopted the seven-line stanza of Chaucer. His language, too, with its infusion of English words, was not strictly Scotch. Chaucer's influence in the north reached its height in *The Testament of Cressid* by Robert Henryson of Dunfermline (d. about 1506), long attributed to Chaucer himself. It is a continuation of *Troilus and Cressida*. Henryson was also the author of *Robene and Makyn*, the earliest pastoral in any English dialect, and of several delightful fables in verse. The greatest name of this period is William Dunbar (d. about 1513), who was connected with the Court of James IV. He was likewise affiliated with the school of Chaucer by *The Goldyn Targe* and *The Thrissill and the Rois*. His masterpiece is the grim *Dance of the Sevin Deadly Synnes*. Gavin Douglas, who also handled allegorical themes in *The Palice of Honour*, translated Vergil's *Æneid*, to the various books of which he prefixed remarkable verse descriptions of the months and seasons. A poet more widely read was Sir David Lindsay (d. 1555), who possessed rare power of observation and a vigorous style. His richly imaginative *Dreme* was followed by several trenchant satires on abuses in Church and State, such as *The Testament and Compluynt of our Sovereign Lordis Papynge*, and an interlude entitled *Inc Pleasant Satyre of the Thrie Estaitis*, interesting as a link in the history of the English drama and as a vivid picture of contemporary manners. Lindsay was the last of the great poets distinctly Scottish. After him Scotch verse lost itself in the bitter theological debates of the Reformation. In the period we have covered there had appeared many poets of less fame and a large body of anonymous verse. Particular attention should be called to the popular ballads, which, like the Scotch *Cherry Chace*, far surpass in imaginative detail similar work in England.

If the Reformation, as has been said, proved ungenial to Scotch verse, it gave an impetus to Scotch prose. Much of this prose, however, hardly rises to the plane of literature. The earliest prose work of interest was John Bellenden's translation (completed 1533) of Hector Boece's *Historia Scotorum*. Of greater importance was *The Compluynt of Scotlande* (printed 1549), whose authorship is still uncertain. It is a curious and brilliant satire on Scotland. Scotch prose attained its most effective power in *The History of the Reformation* (completed 1564) and the various tracts of John Knox. Other prose writers of the period were Robert Lindsay of Pittscottie (d. 1565?), author of a continuation of Boece's chronicle history; George Buchanan, who wrote both in Latin and in the vernacular; and Bishop John Leslie (d. 1596), the leading Roman Catholic historian of Scotland. Scotch prose may be said to end with James VI., author of *Demonologie* (1587) and other treatises. After ascending the English throne as James I. in 1603 he adopted in his books the language of the south.

The Scotch poets of the time, like Sir William Alexander and William Drummond of Hawthorn-

den, commonly followed the example of King James. But there were some exceptions. Several balladists among the aristocracy, as Robert Scamhill (d. about 1665) and Lady Wardlaw (d. 1727), continued the traditions of the early poets. The language of the peasantry still remained Scotch, and several writers of the eighteenth century attempted to restore the native speech to literature. Allan Ramsay (d. 1758) gained immense popularity by his songs composed in a mixture of Scotch and standard English. After Ramsay came a group of imitators, and then the fine vernacular verse of Robert Ferguson (d. 1774), who is rightly regarded as the forerunner of Robert Burns. A peasant by birth and thus at home in the vernacular, Burns added to his knowledge by reading Ferguson, Ramsay, and the poets of the old period. In Burns the humor and pathos of native Scotch song reached its highest point. The tradition of Scotch song was kept up with varied success by John Mayne (d. 1836), Hector MacNeill (d. 1818), Joanna Baillie (d. 1851), Lady Nairne (d. 1845), James Hogg (d. 1835), Robert Tamnahill (d. 1810), and Allan Cunningham (d. 1842). Others still continue to write occasional good songs. But Scotch verse since Burns has run into a sort of Scotch-English, which announces its end. It should be observed that the revival of the Scotch dialect has had an important influence on the novel. Sir Walter Scott's characters taken from the peasantry speak this native speech. And more recently Barrie and Watson have written admirable stories in the dialect of remote parishes.

SCOTUS, DUNS. A mediæval schoolman. See DUNS SCOTUS.

SCOTUS, JOHANNES. A philosopher of the ninth century. See ERIGENA.

SCOURGE OF GOD, THE. A name given to Attila, King of the Huns, who was the terror of Europe in the fifth century.

SCRAG WHALE (so called because the back is scragged instead of finned). The name of two different whales. That in the North Atlantic is a porqual (*Agelaphus gibbosus*), which reaches about 50 feet in length, has no dorsal fin, and has whitish baleen. The scrag of New Zealand waters is the 'pigmy right whale' (*Neobalæna marginata*), which does not exceed about 15 feet in length, but yields the most elastic and toughest whalebone sent to market.

SCRANTON. The fourth city in population of Pennsylvania and the county seat of Lackawanna County; situated on the Lackawanna River, 160 miles by rail north of Philadelphia and 145 miles northwest of New York (Map: Pennsylvania, F 2). Five railroads enter the city: the Delaware, Lackawanna and Western, main line and Bloomsberg division; the Delaware and Hudson, main line; the New York,

Ontario and Western; the Erie (Wyoming division); and the Central Railroad of New Jersey. There is one electric line, the Wyoming Valley Rapid Transit Company. The street railway system comprises 40 miles of well-constructed roads. Scranton has a picturesque location in the Lackawanna Valley, on the plateau at the confluence of Roaring Brook and the river. The city, which has an area of 19½ square miles, is situated at elevations ranging from 800 feet to nearly 1800 feet above the sea. There are 149 miles of streets and avenues in addition to traveled courts and places.

Among the notable public edifices are the United States Government Building, Court House, City Hall, Albright Memorial Library, Moses Taylor Hospital, the Oral School for the Deaf and Dumb, and the High School. Other prominent structures are the International Correspondence School, the Y. M. C. A., the Home of the Friendless, the Board of Trade, the Jermyn Hotel, the Masonic Temple, and the spacious Connell Building. The city has two free and several other libraries. The largest is the Albright Memorial, having 45,000 volumes, with an annual circulation of 125,000 volumes. There are 40 school buildings, surpassed by none in the State in architecture and modern improvements, besides several colleges and academies, an Historical Society, and a Society of Natural Science. The two public parks contain 100 acres. The valuation of real property (1903) is \$54,157,813.

Scranton is the centre of the great anthracite coal region, and is one of the principal distributing points for coal. It is also an important centre for general trade, having a number of wholesale blocks. There is invested in incorporated manufacturing establishments \$25,000,000. The leading plants include a nut and bolt manufactory, a lace curtain mill, a knitting mill, iron foundries, locomotive and stationary engine works, and several silk mills. The government is vested in a mayor, elected every three years; select and common councils; and administrative departments as follows: public safety, public works, assessors, city treasurer, city comptroller, city attorney, city clerk, and sinking fund commission. The city spends annually, in maintenance and operation, nearly \$500,000. The public schools are under the direction of a board of control, on which each ward has a representative. The total expenditures for school purposes, including repairs, salaries, and erection of buildings, for 1902, were \$430,489.

In 1788 Philip Abbott of Connecticut, his brother James, and others formed the first settlement, now included in the city, on the 'Roaring Brook.' In 1799 came the Sloenns, who named their settlement 'Sloenn Hollow.' The city was founded, however, by Joseph H. and George W. Scranton in 1840. It was incorporated as a borough in 1854, and was chartered as a third-class city in 1866, becoming a second class city in 1901. The population, in 1860, was 20,000; in 1870, 35,092; in 1880, 43,850; in 1890, 75,275; in 1900, 102,026.

SCRANTON, GEORGE WHITEFIELD (1811-61). An American manufacturer, born in Madison, Conn. In 1839, with his brother, Joseph H. Scranton, he established an iron manufactory on the site of the present city of Scranton, which is named for them. He was one of the organizers of

the Pennsylvania, Delaware and Western Railway, and has served nearly years as its president, being also president of other railroads and transportation companies.

SCREAMER. Any of three curious South American birds, the relationship of which has been a matter of considerable discussion. They are now regarded as most nearly related to the ansutoriform birds and forming a family (Palamedetidae). The bill is rather short, conical, curved at the extremity; there is a bare space around the eyes; the toes are long; each wing is furnished with two strong spurs, one at the bend of the wing and a smaller one nearer the tip. The horned screamer, or 'anhima,' 'chahia,' or 'kamichi' (*Palamedia cornuta*), inhabits swamps in Brazil, Guiana, and Argentina, and feeds on the leaves and seeds of aquatic plants. It is of a blackish-brown color, is nearly as large as a turkey, and has somewhat the appearance of

CRESTED SCREAMER (*Chauna cristata*).

a gallinaceous bird. It receives its name from its loud and harsh cry. From the head, a little behind the bill, there rises a long, slender, movable horn, the use of which is not clear. The spurs of the wings are supposed to be useful in defense against snakes and other enemies.

Closely allied to this is the genus *Chauna*, to which belongs the chauna, or crested screamer (*Chauna cristata*), a native of Brazil, Paraguay, and Argentina, the head of which has no horn, but is adorned with erectile feathers. The plumage is mostly lead-colored and blackish. The wings are armed with spurs. It is capable of domestication, and is sometimes reared with flocks of geese and turkeys, to defend them from vultures, being a bold and powerful bird. Consult: Evans, *Birds* (London, 1900); Sclater and Hudson, *Argentine Ornithology* (London, 1888).

SCREECH OWL. See OWL.

SCREEN (OF. *escriu*, *escriu*, *escriu*, Fr. *écran*, screen, probably from OHG. *scranna*, Ger. *Schraun*, bench, shambles, railing, grate, court), in architecture, an inclosure or partition of wood, stone, or metal work. It is of frequent use in churches, where it shuts off chapels from the nave, separates the nave from the choir, and frequently incloses the choir all round. The rood-screen is that on which most labor is

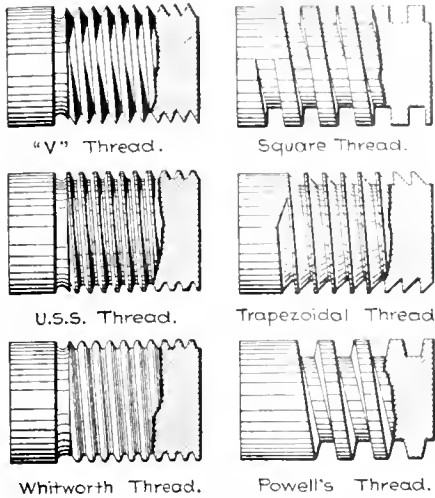

usually bestowed. In England many beautifully carved screens in stone, enriched with pinnacles, niches, statues, etc., remain, such as those of York, Lincoln, and Durham; and specimens in wood, carved and painted, are common in parish churches. The term 'screen of columns' is also applied to an open detached colonnade.

SCREW (OF. *escroic*, *escroic*, *escro*, Fr. *écrou*, screw, perhaps from Lat. *scrobs*, ditch, trench, or more probably from Lat. *serofa*, sow). An inclined plane wrapped around a cylinder in such a manner that the height of the plane is parallel to the axis of the cylinder. If the screw is formed upon the inner surface of a hollow cylinder it is usually called a nut. Defined less technically a screw is a solid cylinder having a helicoidal rib, ridge, or thread projecting from its surface. Historically the invention of the screw is ascribed to Archimedes (B.C. 250). It was used by the Romans of the Empire in their wine and oil presses and was probably familiar to most of the Mediterranean peoples at the beginning of the Christian Era.

It is one of the most extensively used of the elementary mechanisms and is employed in the manufacture and operation of nearly all structures, machines, and mechanisms. The force for operating the screw is universally applied at the end of a lever arm at right angles to the axis of the screw. When used for transmitting energy the screw is generally operated in connection with a nut; either the screw or the nut may be fixed, the other being movable.

Until the nineteenth century the manufacture of screws was a rather crude process of forging and cutting with hand tools. At present large screws for transmitting energy are made on screw-cutting lathes, the cylinder of metal being rotated by the lathe in front of a tool, which advances at a uniform speed parallel to the axis of the work and thus cuts a helicoidal groove. Generally such screws are made with rectangular threads. The most common forms of screws are wood screws for cabinet and carpenter work and machine screws for metal work. Machine screws are made with care to secure precision in the forms and dimensions of the thread, but wood screws are more roughly made. These small screws were little known or used before 1836, being rudely made by hand with imperfect tools. The head was forged or swaged by a blacksmith; the thread and neck were formed by the use of hand dies and hack saws. In 1836, as a result of an American invention, the old hand tools were transformed into machines having the capacity of imparting to each tool its proper motion. The swaging hammer became the heading machine, receiving the end of a coil of wire and regularly cutting the required length for a blank, which then received such a blow as to 'set up' one end of the wire to form the head—the operation continuing automatically until the whole coil was made into blanks. These blanks were then handled individually and presented to organized machines, first for shaving the head, then for nicking, and lastly for cutting the thread. The above constitutes the second era in this manufacture; and such machinery, partly automatic, was all that was in use before 1846. Then a third era ensued, and an entire revolution was effected by constituting the machines entirely automatic. The blanks are by this system supplied in mass by the operator, the machine

separating and handling each blank respectively as the nature of the operation demands, and producing finished screws with wonderful rapidity, regularity, and perfection.

STANDARD SCREW THREADS.

Formerly all wood screws were cut screws, that is, the metal of the body of the blank was cut away in grooves, leaving the thread projecting. In recent years, however, a process of rolling and press working has been employed by which the threads are raised without loss of the metal between them. In nearly all cases the threads of wood screws and machine screws are triangular in shape. The extensive use of screws has led to standard shapes and dimensions being adopted for screw threads. In England this standard is the Whitworth thread, designed by Sir Joseph Whitworth; in the United States it is the United States standard or Sellers thread, devised by William Sellers of Philadelphia. These standards relate particularly to the threads of machine screws, bolts, and nuts, etc. For tables of dimensions of screw threads and various other data regarding the use and efficiency of screws, see Kent's *Mechanical Engineers' Pocket-Book* (New York, 1900); also Rowland, on "Screws," in the *Encyclopædia Britannica*.

SCREW DOCK. See CAISSON.

SCREW-PINE (*Pandanus*). A genus of plants of the natural order Pandanaceæ, natives of tropical Asia and of the South Sea Islands. Many of them are remarkable for their prop roots. Their spiny-edged, sword-shaped leaves, 3 to 4 feet long, are spirally arranged in three rows. In general appearance, when unbranched they resemble gigantic pineapple plants, whence their popular name. *Pandanus odoratissimus* is a widely distributed spreading and branching tree, 25 feet high, much used in India for hedges. It grows readily in a poor soil and is one of the first plants to appear on newly formed islands in the Pacific. The unexpanded flowers are frequently boiled with meat. Oil impregnated with the odor of the flowers and the distilled water of them are highly esteemed East Indian perfumes. The terminal buds, the soft, white bases of the leaves, and the fleshy part of the drupes,

which grow together in large heads, are eaten in time of scarcity. The spongy and juicy branches are used as cattle food. The leaves are used in thatching, and in making a kind of umbrella common in India, and their tough longi-

SCREW-PINE (*Pandanus utilis*).

tudinal fibres for making hats and cordage. Their spindle-shaped fibrous roots are split for basket-making. More valuable as a fibre plant is an allied species, *Pandanus utilis*, the vacoa of Mauritius, which grows to a height of about 30 feet, but from continual cropping of its leaves usually grows to 6 or 10 feet. The fibres of its leaves are used for making bags, which rival in cheapness and usefulness the gummy bags of India. In temperate and northern climates these plants are commonly cultivated in greenhouses for ornament.

SCREW PROPELLER. A contrivance for propelling vessels which acts in the water like a screw bolt in a nut. It consists of a hub of cylindrical or spherical shape to which are attached the blades that form the screw. Screw propellers are cast in one piece or built up, the blades being attached to the hub with bolts. The latter plan is now common, though small screws are usually cast in one piece. Propellers are made of cast iron, cast steel, or bronze. The best are made of bronze of fine quality, because, though not equal to steel in strength, it corrodes very slowly—a very important point, as the corrosion not only diminishes the strength, but makes the blades rough and ragged at the edges, thereby reducing their efficiency.

The blades of a screw propeller may be considered as parts of separate threads winding around the hub and shaft, cut off by planes perpendicular to the shaft and at a distance apart about equal to the length of the hub. A simple true screw would be made of such form, but experiment has shown that some variations from the simple form are desirable. In the first place, the edges of the blades must be sharp and the thickness near the hub sufficient to stand the strain of propulsion. The outer ends are pointed or have the corners cut off to reduce the vibration, and in many screws the driving or leading edge is thrown to the rear from the normal radial line for the same reason. The number of blades varies from two to four. Two-bladed screws are at least as economical in smooth water as screws with more blades, but in

of the propeller may become excessive, and a screw of large diameter are used for the merchant service for slow vessels. For fast vessels, merchant or naval, the screw is the rule.

The *pitch* of a propeller is its linear advance in one revolution, supposing the water to be immovable and the screw to turn in it as a bolt turns in a nut. If we imagine the thread to extend sufficiently along the shaft to make one complete revolution, the pitch is equal to the length of shaft required for this. In the true screw the pitch is constant at all points, but in propellers there are usually some variations in this respect, particularly near the hub in those which are cast and have small hubs. Many propellers are designed to have slightly varying pitch at different parts of the blade, but the advantages of this have never been conclusively determined. The hub, or boss, is now very commonly spherical with a conical tailpiece. Since the part of the blade near a relatively small hub is of little use, hubs are now made quite large, one fifth to one fourth the diameter of the screw. The diameter of the screw depends upon many things and no absolute rule can be laid down, though approximate rules are given in some text books. It is now general practice to record experimental data and design the screws in accordance with the results of actual practice, with such variations as the particular characteristics of the ship and machinery seem to require.

As it works in a yielding fluid, the propeller in ships of ordinary form has a greater speed than would be required if it turned in a solid nut. The difference in the distance traversed in the two cases is called the 'apparent slip.' In all cases, however, the propeller acts upon water already in motion, so that the *real slip*, which represents the backward velocity of the water acted upon by the screw, may differ considerably from the *apparent slip*. The speed of this following water is difficult to ascertain, so that the slip ordinarily referred to is the apparent slip. If v represents the speed of the vessel, s the speed of the screw, and w the forward speed of the water, then

$$\text{real slip} = \frac{s - (v - w)}{s} = s + w - v$$

Since a ship can only move by driving water astern, it is plain that *negative real slip* is impossible; but from the formula given it is evident that if w is large, real slip might exist even if v exceeded s . In rare cases, with vessels of exceptional form, negative slip has been observed; it always indicates a wasteful expenditure of power, for the force which gives forward motion to the water is derived from the ship in some way (bad shape of hull, frictional resistance, etc.). It must be noted that real slip—and therefore usually apparent slip—is a necessity of screw propulsion and does not of itself indicate loss of power. It is a necessary sequence of the action of a screw in a yielding fluid. The slip may be too great or too small, however; in the former case the pitch is probably (i.e. supposing no other cause operative) too great; if it is too small the pitch is probably too little. The efficiency of different forms of propellers differs but little provided their pitch, blade area, etc., are suitable to the conditions of their use; but several changes have to be made in some in-

stances before these details are correctly determined. The most important point to be considered in propulsive efficiency is the shape of the vessel's hull. The shape of the bow (i.e. the entrance) is not so important, however, as that of the stern (i.e. the *rau*); the former may be quite full and bluff without greatly reducing the speed except at very high velocities, but the latter must be very hollow or lean or the water will not flow in solid to the propeller or propellers except at low speeds.

The screw is secured to the end of an iron or steel shaft called the propeller-shaft or tail-shaft, which connects to the line shafting, which in turn joins the crank-shaft at the engines. The push or thrust of the screw is received on the thrust bearing, which has a series of raised lugs or collars and grooves fitting over or into similar ones in the shaft. Slow vessels and small vessels usually have a single screw. Large, fast ships are now generally fitted with twin screws, and a few are fitted with three. Some vessels having turbine engines have as many as nine screws, three on each shaft, and a Russian circular armored ship has six screws, each on a separate shaft. The advantages of multiple screws are that the very large power needed in modern fast vessels may be divided instead of being supplied by one ponderous engine, and the difficulties and dangers of breakdowns much reduced.

One of the first definite proposals—if not the first—of using the screw for propulsion came from the great French mathematician Bernoulli, who, in 1752, received a prize from the French Academy of Sciences for an essay on the manner of propelling boats without wind, in which he proposed the use of a screw. During the Revolution David Bushnell, an ingenious and patriotic American, made a practical submarine boat propelled by a screw turned by hand power and actually used the boat in an attempt to blow up a British man-of-war. See TORPEDO BOAT, SUBMARINE.

Two Americans, Oliver Evans and John Fitch, experimented with screw propellers between 1780 and 1790. In 1801 or 1802 another American, John Stevens, built a screw-propelled steamboat which he successfully used. But it remained for Ericsson to develop the screw. His first successes were achieved in England in 1837-38, but, getting little encouragement there, he came to the United States in 1839, where his plans were eagerly taken up by Commodore Stockton and other officers of the navy. Through their efforts the United States steamship *Princeton*, of 1000 tons, was built under Ericsson's superintendence. She was the first screw man-of-war built in any country and the first to have her machinery wholly below the water line. Her almost unqualified success settled the question of the availability of the screw for propulsion, particularly for war vessels. The use of paddle wheels in the merchant service continued for many years, but by 1870 the screw had everywhere triumphed except in the navigation of shoal or interior waters. For further information, consult: Barnaby, *Marine Propellers* (London and New York, 1891); *Transactions of the Institution of Naval Architects* (London, annual; different numbers contain many important papers on screw propulsion); *Navy Professional Papers* (United States Navy Department), "Screw Propulsion"; *Information from Abroad* (an annual; different

numbers contain papers on screw propulsion and its development), issued by the office of Naval Intelligence, United States Navy; Bennett, *The Monitor and the Navy Under Steam* (Boston, 1900); Seaton, *Manual of Marine Engineering* (London and New York, 1896); Semutt and Oram, *Mariae Steam Engine* (ib., 1898). See also the articles on SHIPBUILDING and on STEAM NAVIGATION.

SCREW-WORM. The larva of a dipterous insect (*Comptosia macellaria*), parasitic upon mammals and occasionally attacking human beings. The adult fly belongs to the family Sarcophagidae and is less than a half an inch in length, bluish green with metallic reflections and three black stripes upon the thorax. It appears in the summer time and lays a mass of eggs either upon some decaying matter or in an open wound on some animal. Many cases are on record where eggs have been deposited in the nostrils of catarrhal persons sleeping in the open air. The eggs hatch in a very short time, even in a single hour. The larva or maggot is a whitish footless grub, rather slender and quite active, and burrows into the tissues of the affected animal or decaying matter that furnishes it food. It grows rapidly and matures in the course of a week or less, then leaves the wound and enters the ground to transform to pupa. The puparia are brown in color, cylindrical, rounded at the end, and about two-fifths of an inch long. The pupal stage lasts from 9 to 12 days, and there may be many generations in the course of a summer. The screw-worm fly inhabits all of tropical and much of temperate America, extending from Canada to Patagonia. As a direct application for the sores infested with worms a carbolic wash is advised, 1 part of carbolic acid to 30 parts of water. A little glycerin may be added, and a final dressing with pine tar is recommended. Where the nasal passages of human beings are inhabited by the maggots they should promptly be syringed out with a mixture of 1 part of carbolic acid to 200 parts of water. Several fatal cases have been reported. See MYIASIS. Consult Osborn, *Bulletin No. 5 (over series)*, Division of Entomology, United States Department of Agriculture (Washington, 1896).

SCRIBE (Lat. *scriba*, from *scribere*, to write, scratch; connected with *scrabs*, ditch). A name given to one of a class of men in the Jewish Church who were learned in the law. The Hebrew word (*sôphér*) is related to the word meaning 'book' (*sôpher*), and hence occurs originally for a 'secretary,' as of Baruch (Jer. xxxvi. 26), or of a writer in general (Ps. xlv. 1); it is also used of a certain governmental official, perhaps a muster-officer (e.g. II. Sam. viii. 17). But upon the canonization of the Jewish Scriptures, which were 'the Books' *par excellence*, the name became confined to those who expounded these sacred volumes. In this confined sense the word first appears applied to Ezra, 'the priest, the scribe' (Ezra vii. 11); this application is significant because Ezra (q.v.) was the leading actor in the process of that canonization. In him the priest and the theologian are combined, naturally enough, for his work dealt with the priestly law. But it was the purpose of this canonization, which took place by a popular ratification (Neh. viii.), to make the law the code for the whole life of the nation, so that it soon became an object of even greater interest to

the laity. Hence after the first steps in this process these scribes came to be drafted more and more from the people, and toward the end of the Jewish Commonwealth only a minority were of the priestly or Sadducee interest, the great number belonging to the Pharisees. (See PHARISEES; SADDUCEES.) The New Testament gives the earliest full data for this learned caste. The Greek word (*γραμματεὺς*, 'man of letters') is a translation of the Hebrew. Other terms used are more exact in definition of the office; they are called 'lawyers' and 'teachers of the law.' Josephus well describes them as 'interpreters of the ancestral laws.' The New Testament carefully avoids confusing them with the Pharisees (e.g. Matt. xxiii. 2), for while the great majority of them belonged to this party, the scribes were the learned leaders of the party, those who had approved themselves by education and public acknowledgment as fit teachers. They were the theologians, and inasmuch as Jewish theology was eminently practical, they were the jurists who interpreted the law for the courts, and the casuists who settled individual questions. Their functions have been defined as (1) the theoretical development of the law; (2) the teaching of the law; (3) the giving of legal opinion in court. They enjoyed the unbounded reverence and obedience of the people (even the Sadducees could not withstand their power) and established what is, perhaps, the most remarkable system of intellectual authority apart from caste and priesthood that the world has ever seen. With the fall of the Jewish State the scribes became the sole authority in the Church, and the results of their labors are preserved in the Talmud (q.v.), which gives the minutest details of their life and thought. Jewish terminology, however, confines the word *Sôphérim* to the pre-Talmudic teachers. Consult Schürer, *History of the Jewish People in the Time of Jesus Christ* (Eng. trans., Edinburgh, 1899). For examples of the methods and thought of the scribes, consult Taylor, *Sayings of the Jewish Fathers* (i.e. the *Pirke Aboth*; Cambridge, 1877).

SCRIBE, skroh. AUGUSTIN EUGÈNE (1791-1861). A French dramatist. Born in Paris, and educated for the law, he turned, at twenty, to the stage (*Les dervis*, 1811), but he won his first great successes with *Une nuit de la garde nationale* and *Flore et Zéphire* (1816), after which, alone or in collaboration, he poured out an almost unbroken succession of some 400 plays collected in 76 volumes, noteworthy for their interesting plots and light, sparkling dialogues, but most of all for their mastery of the technique of the stage. He essayed every kind of dramatic writing, tragedies, comedies, vaudevilles, opera libretti, collaborating with others and often being little more than editor of others' ideas. He was elected to the Academy in 1834. The best of his plays are, chronologically, *Valérie* (1822), *Le mariage d'argent* (1827), *Bertrand et Raton* (1833), *La camaraderie* (1833), *Le verre d'eau* (1840), *Une chaîne* (1841), *Adrienne Lecouvreur* (1849), *Les contes de la reine de Navarre* (1850), *Bataille de dames* (1851), and *Les doigts de fée* (1858). On the last three he worked with Legouvé. The more noted of his libretti are *Fra Diavolo* (1830), *Robert le Diable* (1831), *La Juive* (1835), *Les Huguenots* (1836), *La Fanciulle* (1840), *Le Prophète* (1849), *L'Africain* (1865). Scribe wrote also some insignificant

of opportunity in the gift of dis-
tinctly new and striking theatri-
cal effects. Scribe's local color is careless,
his sense of character weak, but from him
came the singer, Angier, and above all Sardou,
whose mastery of stagecraft, and of the
art of theatrical presentation, which has
been France for half a century unquestioned
leadership in the drama.

BIBLIOGRAPHY. Scribe's *Œuvres dramatiques*
in 76 vols. (Paris, 1874-85). There is a
F. by Legouvé (ib., 1874). Consult: Matthews,

1892).

SCRIBLERUS, MARTINUS, MEMOIRS OF. A
satirical history, ridiculing affectation in learn-
ing, by John Arbuthnot, first published among
Pope's works (1741). The hero had read every-
thing, but lacked taste and judgment.

SCRIBLERUS CLUB. A literary club in
London formed in 1714 by Swift, to which be-
longed Arbuthnot, Pope, Gay, Bolingbroke, and
others. Its object was to satirize the prevalent
false taste in literature; though it was short-
lived, we owe to it Arbuthnot's *Martinus Scrib-
lerus*, Gulliver's *Travels*, and indirectly Pope's
Dunciad.

SCRIBNER, CHARLES (1821-71). An Ameri-
can publisher. He was born in New York City
and educated at the University of New York and
at Princeton College, where he graduated in
1840. He studied for the bar, but on account of
feeble health did not practice, and in 1846
formed a partnership in New York with Isaac D.
Baker in the book-selling and publishing busi-
ness. The firm, or rather Mr. Scribner, for his
partner soon died, acquired the works of such
authors as Headley, Willis, Donald Mitchell ("Ik
Marvel"), Dr. Holland, Dr. McCosh, Dr. Bush-
nell, etc. In 1857 Mr. Charles Welford became
a partner, and a specialty was made of the im-
portation of books from England. The partners
also entered extensively into the publication of
educational books, and in 1865 established *Hours
at Home*, which in 1870 became *Scribner's Maga-
zine*. This monthly, under the editorship of Dr.
J. G. Holland, achieved great popularity, and
was sold in 1881 and rechristened *The Century
Magazine*. On the death of Mr. Scribner, the
firm was reorganized under the name Scribner,
Armstrong & Co.; the name of Charles Scrib-
ner's Sons was assumed in 1879, and eight years
later the new *Scribner's Magazine* was estab-
lished.

SCRIBNER, FRANK LAMSON (1851-). An
American botanist, born in Cambridgeport, Mass.,
and educated at the Maine State College of Agri-
culture. He was connected with Girard College
from 1876 to 1881, and in 1886 entered the Agri-
cultural Bureau of the United States. From
1888 to 1891 he was professor of botany in the
University of Tennessee. In 1894 he was ap-
pointed chief of the Division of Agro-tology in the
United States Department of Agriculture. He
wrote many valuable papers on the grasses, a
subject on which he ranks as a foremost Ameri-
can authority.

SCRIP (corrupted from *script*, Lat. *scriptum*,
written paper, book, law, mark, neu, sg. of *scrip-
tus*, p. p. of *scribere*, to write; influenced by
popular etymology with *scrip*, wallet, pouch). A
certificate of a right to a share or shares in a
corporation, or to receive payment of money at a
future date. Where a corporation is being orga-
nized, and the regular stock certificates have
not been issued, it is customary to give sub-
scribers scrip or 'scrip certificates,' as they are
often called, for payments on account of their
subscription to the capital stock, and this scrip
may be exchanged later for certificates of stock.
Scrip for paid-up subscriptions may be trans-
ferred in the same manner as certificates of
stock, and the same principles of law apply as
to the rights of the parties. Similar 'scrip' cer-
tificates are sometimes issued for sums less than
the full value of a bond in a corporation, as in
rebonding a corporation, which entitle the holder
of a sufficient number to aggregate the face of a
bond to exchange them for it. Corporations some-
times issue scrip dividends, where they desire to
retain surplus earnings as working capital and
increase their capital stock.

The term scrip was also commonly applied to
the certificates issued by State banks which
were designed to pass as currency. This scrip
was merely a promise to pay the bearer the
amount named on the face of the certificate, and
was similar to United States Government 'green-
backs.'

Certificates or orders on stores issued by em-
ployers to employees are often called scrip, espe-
cially where they are issued in a series of
values to correspond with United States currency.
Such 'scrip' is, of course, not legal tender. Consult:
Morse, *Banks and Banking* (3d ed., 1888);
Morawetz, *Private Corporations* (2d ed., 1886);
also see CORPORATION; DIVIDEND; MONEY; STOCK.

SCRIPTURE, EDWARD WHEELER (1864-).
An American psychologist, born at Mason, N. H.
He graduated at the College of the City of New
York in 1884, and studied at Berlin, Zurich, and
Leipzig. He was fellow at Clark University in
1891, and in the following year became instructor
in experimental psychology at Yale and director
of the psychological laboratory there in 1898.
In addition to various psychological apparatus,
he devised a method of producing anesthesia by
electricity, and of measuring hallucinations and
imaginings. He wrote: *Thinking, Feeling, Do-
ing* (1895); *The New Psychology* (1897); *Ele-
ments of Experimental Phonetics* (1902).

**SCRIVENER, FREDERICK HENRY AMBROSE
(1813-91).** A distinguished English biblical
scholar, born in London. He took his degree at
Cambridge in 1835 and after a number of years'
experience as a teacher he became in 1861 rector
of Saint Germans, Cornwall, then vicar of Hen-
don, and prebendary of Exeter in 1876. Dr.
Scrivener was much interested in the textual
criticism of the New Testament and his labors
in this field have proved eminently useful. His
most important service was his *Plain Introduc-
tion to the Criticism of the New Testament*
(1861; 4th ed., posthumous, edited by E. Miller,
1894). Other valuable publications were his
edition of the famous Cambridge *Codex Bezae*,
edited with a critical introduction, annotations,
and fac-similes (1864), and *The New Testament
in the Original Greek*, according to the text fol-

lowed in the Authorized Version, together with the changes adopted in the Revised Version (1881). Scrivener's critical principles were those of the old school, marked by reverence for the *Textus Receptus*.

SCRIVENER'S PALSY, or **WRITER'S CRAMP**. See **NEUROSIS**.

SCROFULA (Lat., diminutive of *scrofa*, sow), or **SIRRMA**. A tuberculous affection manifested by enlargement of the lymph glands and defective nutrition of the tissues generally. The term has had a varied significance at different periods and among different writers on medical subjects, but at the present time scrofula is believed to be merely a manifestation of tuberculosis and to be due entirely to infection and subsequent irritation set up by the specific bacillus of that disease. By many authorities scrofula is looked upon as the 'pre-tuberculous' stage of consumption. It is certain that individuals with tubercular adenitis are prone to develop pulmonary tuberculosis, and the presence of these foci are a constant menace. On the other hand, many persons of exceptional bodily vigor are met with who in childhood had enlarged glands. Many manifestations of disordered blood conditions formerly grouped as scrofulous are now known to be either tuberculous or due to other and definite causes. For example, chronic inflammation of the joints, carious ulceration of the bones, ulcers of the cornea, eczema, and catarrhal states of the mucous membrane of the nose, were formerly classed as strumous.

Individuals of the lymphatic type are most liable to develop marked scrofulous symptoms. Heredity plays some part in the development of the disease, but it is more likely to arise from poor food and bad hygienic surroundings. The glandular enlargements are most frequently seen in the neck, but all the lymphatic glands of the body may be affected with little or no involvement of other portions of the organism. There is a tendency on the part of these glands to suppurate and form very chronic abscesses. Scrofulous children are liable to suffer from chronic bronchitis, diarrhoea, and catarrhal disorders of the nose and throat, and any intercurrent disease such as measles is apt to take a severe form with them.

The treatment of scrofula is chiefly hygienic and comprises fresh air, in abundance, warm clothing, and nutritious food. Cod-liver oil and the syrup of the iodide of iron are the most generally beneficial medicines, although iron, strychnine, and arsenic are excellent tonics. Local applications of iodine will help to reduce the enlarged glands. When these break down, however, or threaten to suppurate, thorough excision is the only efficient remedy, and the unsightly scars that result from long continued suppuration may thus be avoided.

The old English name for scrofula, 'the king's evil,' was derived from the belief that the disease could be cured by the royal touch. The faith in its efficacy was widespread, surviving several centuries. Both the English and French kings practiced this rite, originated, it is said, by Edward the Confessor.

SCROGGS, SIR WILLIAM (c.1623-83). An English jurist, born at Deddington, Oxford. He attended Oriel and Pembroke Colleges, Oxford, took his B.A. in 1640, and was admitted to

Gray's Inn in 1641. During the Civil War he fought on the Royalist side and was called to the bar in 1653. In 1668 he was assigned as counsel for Sir William Penn in his proposed impeachment trial, and in 1676 was knighted and made a justice of the Court of Common Pleas. He was always subservient to the King and made political speeches from the bench. He was appointed Lord Chief Justice in 1678 and was called to the assistance of the Commons in the investigation of the Popish Plot (q.v.). In 1679 he presided over the trials of the accused and intimidated all witnesses for the defense, but at the trial of Sir George Wakeman, the Queen's physician, changed tactics and disparaged the evidence of Bedloe and Titus Oates. By this action he lost favor with the populace and was accused before the Privy Council, but was acquitted. By adjourning the Grand Jury on June 20 he prevented the indictment of the Duke of York as a Papist recusant. He was impeached by the House of Commons on the eight counts, but Parliament was abruptly dissolved and he was never tried. The next year he was removed from office, but was granted a pension of £1500 a year. Though a man of much ability, he was not a great lawyer, and no other judge except Jeffreys has so disgraced the bench.

SCROOGE, EBENEZER. A harsh, avaricious, utterly loveless old man in Dickens's *Christmas Carol*, who by a vision of the ghosts of Christmas, Past, Present, and To Come, is changed into a benevolent, cheerful person.

SCROPE, GEORGE JUDAS PORTER (1797-1876). An English geologist, born in London and educated at Harrow and at Saint John's College, Cambridge. He visited Italy in 1819 to study volcanoes, and after his marriage in 1821, when he took his wife's family name instead of his own, Thomson, traveled in Central France and again in Italy and was an eyewitness of the eruption of Vesuvius in October, 1822. With his intimate friend, Sir Charles Lyell, he attacked the prevailing Wernerian theory of volcanic action and advanced the uniformitarian doctrine, insisting at the same time on adherence to the method of actual observation of natural phenomena. But his great fame is as a geologist, and he must rank as one of the most logical and clear thinkers among the natural scientists of his day. He wrote *Considerations on Volcanoes* (1828; 2d ed. 1862) and *Geology of the Extinct Volcanoes of Central France* (1827; 2d ed. 1872).

SCROPHULARIACEÆ (Neo-Lat., nom. pl., from *Scrophularia*, from Lat. *scrofula*, scrofula; so called either because believed to be a remedy for scrofula, or because the knots on the roots were supposed to resemble scrofula). THE FIG-woor FAMILY. A large and widely distributed natural order of dicotyledonous plants embracing about 180 genera and 2000 species, chiefly herbs and subshrubs, and also a few trees (Pambowia). They are adapted to many different habitats and some show marked modifications due to their surroundings. Some species are semi-parasitic upon the roots of other plants, although they retain their green coloration. Some New Zealand species resemble certain conifers. Many species are grown as ornamentals, as calceolaria, snapdragon, speedwell, mimulus,

of the Scotch have been used medi-

SCRUPLE. A character in Jean Wilson's comedy *The Credits* (performed 1663). He is a Nonconformist minister, touched with a satiric cord, as when he calls the strong liquor which he drinks "too good for the wicked; it may strengthen them in their enormities."

SCRUTIN DE LISTE. *skru tañ' de lest* (Fr., voting by list). A method of electing members of the French Chamber of Deputies. According to this method of *scrutin de liste* all the Deputies of a given department are elected on a general ticket, each elector voting for the whole list—the method by which Presidential electors in the United States are chosen. This method was introduced in 1885 with the view of swamping the minority party and removing the Deputies from the strong pressure of local petty interests. It did not, however, prove satisfactory to the majority, and the arrondissement or single-district method was re-established in 1889.

SCUD'DER, HENRY MARIYN (1822-95). An American missionary and minister. He was born at Panditeripo, Ceylon, the son of the Rev. John Scudder, a missionary of the (Dutch) Reformed Church. He was graduated at the University of the City of New York in 1840 and Union Theological Seminary in 1843. The following year he went as missionary to Madura, India. Here he established a hospital and dispensary, having received the degree of M.D. in 1853. In 1864 he returned to the United States and filled pastorates in San Francisco (1865), Brooklyn (1872), and Chicago (1882). From 1887 to 1889 he was again in the mission field in Japan. He published a number of books in the Sanskrit, Tamil, and Telugu languages.

SCUDDER, HORACE ELISHA (1838-1902). An American author and editor, born in Boston, Mass. He graduated from Williams College in 1858 and then taught school in New York City. Subsequently, removing to Boston, he devoted himself to literary work. In 1867 he was made editor of the *Riverside Magazine for Young People*. In 1890 he succeeded Thomas Bailey Aldrich as editor of the *Atlantic Monthly*. Although a critic and biographer of recognized ability and an influential man of letters by virtue of his position as editor and literary adviser, he was probably most widely known as a writer of juvenile books, such as *Seven Little People and Their Friends* (1862) and the *Bodley Books*, in eight volumes (1875-85). Other titles of his works are: *Life and Letters of David Colt Scudder* (1864), *Stories from My Attic* (1869), *Stories and Romances* (1880), *Noah Webster ("American Men of Letters," 1882)*, *A History of the United States* (1884), *Men and Letters* (1887), *George Washington* (1889), and *Childhood in Literature and Art* (1894). Doubtless his most important single work is his biography of James Russell Lowell (1901), which presents with fullness, accuracy, and sympathy the chief phases of literary life in New England, with which the biographer himself was throughout his life in touch. Scudder also prepared, with Mrs. Taylor, the *Life and Letters of Bowdler Taylor* (1884), and was editor of the "American Commonwealths Series."

SCUDDER, SAMUEL HERRARD (1837-). An American zoologist, born in Boston. He was

graduated at Williams College and at Harvard University. From 1864 to 1870 he was custodian of the Boston Society of Natural History, and its president from 1880 to 1887. He was an assistant librarian at Harvard from 1879 to 1882; was attached to the United States Geological Survey from 1886 to 1892; became a member of the National Academy of Science in 1887, and has been an honorary or corresponding member of several foreign societies. An authority on North American butterflies and orthoptera, he has also a world-wide reputation as an investigator of fossil insects, myriapods, and arachnida. He has discussed the subjects of antigeny and digonitism, proposing these terms, and has made elaborate studies on the larval histories and on the ecology of butterflies. His publications are very numerous, comprising: *Butterflies of the Eastern United States and Canada* (New York, 1887-89); *The Fossil Insects of North America* (ib., 1890); *Index to the Known Fossil Insects of the World* (Washington, 1891); *Tertiary Rhynchophorous Coleoptera of the United States* (ib., 1893); *Revision of the Orthopteran Group Melanoplidi* (ib., 1897); *Catalogue of the Described Orthoptera of the United States and Canada* (1900); *Adaphagous and Clarivoran Coleoptera from the Tertiary Deposits at Florissant, Colorado* (Washington, 1900); *Index to North American Orthoptera* (Boston, 1901).

SCUDDER, VIDA DUTTEN (1861-). An American educator and writer, born in India. She graduated at Smith College in 1884, and after studying at Oxford and in Paris became associate professor of English literature at Wellesley College. Her publications include: *The Life of the Spirit in the Modern English Poets* (1895); *The Witness of Denial* (1896); *Social Ideals in English Letters* (1898); and an *Introduction to the Study of English Literature* (1901).

SCUDÉRY, sky'da'ré', GEORGES DE (1601-67). A French poet and playwright, born at Havre. He was popular in his time, but is now remembered chiefly through Boileau's satire, and as being the brother of the celebrated Madeleine de Scudéry, who published many of her works under his name. He served in the artillery until 1630, when his literary interests drew him to Paris. By means of assiduous flattery and an adroit polemic against Corneille, Scudéry received from Richelieu in 1643 an appointment as Governor of Notre Dame de la Garde, near Marseilles, which he retained until 1658. In 1650 he was elected to the Academy. Scudéry's numerous works include: *La comédie des comédiens* (1634); *La mort de César* (1636); *Arminius* (1643); and a pretentious epic *Marie* (1654), which was honored by Boileau's most cutting satire.

SCUDÉRY, MADELEINE DE (1607-1701). A French novelist, born at Havre. She was left an orphan at six, was well educated by an uncle, and, with her scapegrace brother Georges, went to Paris in 1630, where her wit and good sense soon won her high rank in the brilliant society of the Hôtel de Rambouillet. Her early writing was done under the name of her brother Georges, who seems to have collaborated with her in battle scenes, general plans, prefaces, and dedications, and is said in days of need to have kept his sister under lock to secure steady production.

She soon became prominent in society and her salon was much frequented. Her novels are: *Ibrahim* (4 vols., 1641); *Artamène ou le grand Cyrus* (10 vols., 1649-53); *Clelie* (10 vols., 1654-60); *Abathide* (1660); and *Mathilde* (1667). For a generation after its publication the *Grand Cyrus*, which in classic guise depicted French society, was known and studied in all circles that aspired to literary refinement. The longest novel of the world was also the most profitable of the period. The *Grand Cyrus* is not a story, but a framework for conversation, reflection, analytic portraiture. She painted French aristocracy in the *Grand Cyrus* and the bourgeoisie of the new culture in *Clelie*. The characters of her stories were easily recognized as portraits of prominent persons of the day. Her later novels, Spanish and Italian in scene, are insignificant, though regarded as novels (they are her best). She tactfully yielded to the literary ideals of the school of 1660, voiced in Boileau's *Dialogue des héros*, and passed the last forty years of an honored life with the common esteem of people as different in temper and ideals as Racine and La Fontaine, Condé and Madame de Sévigné. Her *Correspondance* is of much literary interest. Consult: Cousin, *La société française au XVIII^e siècle* (Paris, 1858); Sainte-Beuve, *Causeries*, vol. iv. (ib., 1857-62); Le Breton, *Le roman au XVIII^e siècle* (ib., 1890); and Mason, *The Women of the French Salons* (New York, 1891). Summaries of the stories and keys to the characters may be found in Körting, *Geschichte des französischen Romans im 17ten Jahrhundert* (Oppeln, 1891).

SCULPIN (of unknown etymology), or SEA ROBIN. One of the small, strange, spiny marine fishes of the family Cottidae (q.v.), about 250 species of which inhabit rocky shores in northern regions and are known as 'miller's thumbs,' 'dragonets,' 'father-lashers,' 'Irish lords' (q.v.); while the name is given in California to certain fishes of the related family Scorpaenidae. Some, like the 'sea-raven' (q.v.), are large and brilliant, but most of them are mottled in browns, yellows,

▲ SCULPIN (*Hemitripterus Americanus*).

and blacks. They are grotesque in shape and resemble 'bullhead' catfish with a warted body, many fleshy appendages, and the fins grotesquely elongated and fluttering with 'rags.' These fishes lurk about rocky and weedy places, seeking small animals for food, and are a source of annoyance to fishermen, whose bait they steal. They render service as scavengers about fish-curing stations and furnish an abundance of food for larger fishes.

SCULPTURE (Lat. *sculptura*, from *sculpere*, to carve, cut out of stone). A term including all methods of producing a purely artistic result in solid form, as distinguished from architecture, in

which utilitarian work is beautified, and the representation of solid form on a flat surface, for which see DRAWING; PAINTING.

PROCESSES AND MATERIALS. The processes used in sculpture, each of which involves the practice of a separate art, are of radically different character. There is, first, carving with the sharp tool in a substance sufficiently solid and hard to resist the tool, such as stone of different kinds, ivory in all ages or wherever a little luxury was possible (and, as a substitute for ivory, bone), and wood. These are the more common materials; but there is nothing hard which has not been used for sculpture. There are statuettes in rock crystal; Chinese carvings in jade are famous; canoes in antiquity and in modern times are wrought in onyx, and intaglios or incised sculptures are cut in chaledony, sard, and amethyst. Artists working for Roman nobles under the Empire and modern artists in France, imitating and surpassing them, have worked in several hard materials in a single composition so as to produce a polychromatic effect.

Artistic form is also produced by means of modeling in soft material; wax is peculiarly susceptible of free handling and will retain perfectly the form given to it; it has been employed, therefore, in statuettes, busts, and medallions at many epochs in the history of art. Moreover, as it will receive and retain coloring very perfectly, it has been a common medium for polychromatic sculpture. Clay, the material of ceramic art, is equally susceptible of artistic treatment when no intention exists of fixing its form by heat. It is used in this way by the artist for the original small study as well as for modeling the whole figure or group to be produced. If the clay be of a kind good for the purposes of the potter, the piece as originally modeled may be fired and produce a terra-cotta bust or statuette. Such sculpture in terra-cotta is identified with some splendid periods of art. See TERRA-COTTA.

The metals are used in two ways: First, they are cast, and for the purposes of the artist in cast metal the plastic materials mentioned in the last paragraph above are eminently fitted. The mold for a casting in bronze or silver can be made directly or at one remove, from the clay model; and this mold may suffice for one or for many castings, according to the system adopted. These castings may be finished by hand; the file, the chasing tool, even the cutting edge of what is really a chisel may all be called into use to perfect the forms at the sculptor's will. In very recent times some of the great European iron foundries have tried to do artistic work in the hard material we call cast iron; but this they could only do by singular perfection of molding and casting—in short, by mechanical skill and foresight, as the material hardly allows of finishing by hand. Bronze is by far the most common material for this purpose and has lent itself for thousands of years to the work of the sculptor on a very large scale, and also in minute pieces of ornamentation. Silver and gold, and in modern times tin, either pure or slightly hardened by the admixture of another metal, are materials constantly in use. The artistic goldsmith work for ecclesiastic and civil display has always been a fruitful field for the sculptor. See METAL WORK; FOUNDRY.

Metal may also be used in a quasi-plastic way,

of the great ductility of copper and the somewhat greater and available toughness and extensibility of bronze, together with the perfect ease with which the precious metals can be manipulated in this way, have always induced the artist to work in thin plates, embossing them by hammering from the 'wrong' side and then chasing and perhaps engraving the face so as to modify the original embossing. (See REPOUSSÉ.) This is done on a very large scale in the case of colossal bronze statues, which are commonly made of plates of bronze hammered into reliefs and depressions and afterwards bolted together, and also in producing small decorative vessels.

FORMS OF SCULPTURE. As to its form and character sculpture is divisible into that which is in relief (see RELIEF SCULPTURE), in which the masses project slightly from a solid surface, and that 'in the round,' to use a phrase common among artists and which denotes statues, busts, tree groups, and the like. It is, of course, difficult to draw this line of demarcation very sharply; thus there are terra-cotta statuettes of the Asiatic Greek epoch and modern carvings, both Oriental and Western, in which a flat plate of material is cut through (pierced, or à jour) and is carved or molded on one side only into its characteristic and expressive forms. This is in fact a relief without a background. A similar doubt arises in the case of figures in very high relief. In compositions of this character it often happens that a head, a limb, or even a whole figure, except for a small point of attachment, is free from the background, as in the statues filling the pediments of Greek temples, and the carving of the Gothic churches of the fourteenth century in France and elsewhere.

There is one form of sculpture in which the background has not been smoothed off by the removal of the solid material down to the level of the ground of the relief. This is seen on a large scale in the wall-sculptures of Egyptian pylons and propylons, and in the eighteenth-century ivory work of the Japanese, and is what is known as concavo-convex sculpture, or, more simply, concavo-convex sculpture. It is really a process of detaching a certain part of a larger surface by means of an outline formed by an incision, and the further process of manipulating everything within that incision until the head so bounded becomes much more than a mere delineation and is wrought into modulations of surface until a semblance of solid form is secured.

THE SCULPTOR AT WORK. A model of clay is commonly used in all works of sculpture. In works of cast metal (see FOUNDED) the sculptor's activity, except the final chiseling of the metal, ends with the model from which the statue is made. In marbles the Greeks, indeed, are reputed to have worked sometimes without one, and Michelangelo seems to have used only a small wax model or a sketch. The usual modern process is to make a preliminary sketch of wax or clay on a small scale. An iron skeleton of about the proportions of the intended statue is then set upon a stand with a movable top, enabling the sculptor to work conveniently on all sides. Upon this skeleton modeling clay, moistened by water or stearin and glycerin, is laid, and the sculptor models the figure with bone and wooden tools. When the model is finished piece-

molds of plaster are applied from which the statue is cast in plaster.

The conversion of this model into stone is a more complicated process. The model and the block to be carved are placed upon similar pedestals near each other, and by aid of a mechanical device, called the pointing machine, holes are drilled into the marble of the same depth as the depressions upon the surface of the model. The correspondence between the model and the block was formerly indicated by a series of marks made upon each, which enabled the assistant to locate the holes to be drilled. But now a more exact device is used, consisting of a T-shaped instrument by means of which the three most prominent points of the model are fixed upon the stone, and from these points others are gained by an elaborate similar process of triangulation. From the holes thus drilled a trained stone-cutter (*scarpellino*) rough-hews the stone, leaving only the completion for the sculptor.

HISTORY. It is the purpose of this article to treat the development of modern as distinguished from ancient sculpture. That of the Oriental peoples, whose art is principally decorative, has been treated under such heads as CHINESE ART; JAPANESE ART; INDIAN ART; that of the ancient peoples whose art is not connected with the general development under EGYPTIAN, BABYLONIAN, and ASSYRIAN ART. Classic sculpture, which under the Greeks attained its most perfect development, is treated under GREEK ART; ROMAN ART. That of the Middle Ages, which is entirely dependent upon architecture, is best treated under the chief mediæval epochs. (See CHRISTIAN, ROMANESQUE, and GOTHIC ART.) With the Italian Renaissance modern sculpture begins. With its emancipation from architecture the individual artist becomes of importance. It will be found convenient to treat this part of the subject under the two headings, 'the Renaissance' and 'Modern Sculpture.' The first includes the great revival of the fifteenth and sixteenth centuries, to which may be appended the mannered art of the seventeenth and eighteenth centuries as emanating from the same source. With the nineteenth century begins modern art *par excellence*, achieving results most radically different from the ancient period.

THE RENAISSANCE.

FIRST REVIVAL IN ITALY. The chief revival of the art of sculpture, marking, indeed, the origin of Italian and through it of modern sculpture, occurred in Italy during the thirteenth century. There was a general revival in the peninsula, following classic models, with Southern Italy, Rome, and Pisa as the chief centres, of which only the latter was destined to prevail. (See GOTHIC ART.) Here the father of the art was Niccolò Pisano (c.1206-c.1280). In form and in subject his art is a continuation of Tuscan Romanesque, but differing from it in that its inspiration was antique art. His models were late Roman reliefs and sarcophagi, which he imitated not only in figures and in style, but even in technique, as for example in the conspicuous use of the drill. The expression of the faces is serious and noble, and the treatment of the nude is surprisingly good, but the draperies are heavy and the composition is overcrowded. Of his pupils Arnolfo di Cambio, chiefly celebrated as an architect, and Guglielmo d'Agnolo followed his classical tendencies, but his son Giovanni Pisano

(died 1320) gradually evolved a style, the chief characteristics of which were naturalism and dramatic, even extravagant action. It was, indeed, an independent version of the Gothic style, with its strong religious and allegorical elements, that he introduced into Italy. His influence was decisive upon Italian art. Independent schools of sculpture arose at Florence and Siena, and branches of the Pisan school were established at Milan and Naples during the fourteenth century.

At Florence Andrea Pisano's (d. c.1349) reliefs on Giotto's Campanile and other works show a higher development of symbolism, more perfect technique, simpler composition, and more restrained action than Giovanni's. He perfected the hitherto crude art of casting bronze in relief to the highest extent attained before the Renaissance. Andrea's sons found employment at Pisa, but his successor at Florence was Andrea Oragna (d. 1368). Although more extensively occupied with painting and architecture than with sculpture, his work is in some respects an advance upon that of Andrea Pisano. The beautiful tabernacle of Orsanmichele shows him more picturesque and dramatic in style, richer in composition, and grander in form, but a trifle inferior in detail and with less sense for the significant. The Siennese school was inferior to the Florentine during this epoch, being rather picturesque and narrative in character, without a true understanding of form. Its chief works are the sculptures on the façades of the cathedrals at Siena and Orvieto, the latter probably designed by Maitani, and the most important work of its kind in Italy.

EARLY RENAISSANCE. As in painting and in architecture, the Renaissance (q.v.) opened a new world in sculpture. The sources of inspiration were the same as in painting, viz. the study of nature and of the antique, with this difference, that in sculpture the influence of the antique was stronger, owing to the survival of antique statuary. But although the antique from the beginning made itself strongly felt in decoration, and furnished motives, sometimes even figures, to the sculptor, it did not materially influence the general treatment, line or modeling, the prevailing characteristic of which, during the Early Renaissance, was a healthy naturalism. In relief, as in statuary, the highest development was attained; in the former, indeed, some of the qualities of painting, such as the use of color and perspective, were adopted. Marble backgrounds, when not sculptured, were painted blue; other parts, like hair and angels' wings, were gilded, as were usually bronzes, while terracottas were colored to rival painting itself. The art of sculpture, which in the preceding centuries had been mainly a Tuscan product, now became essentially Florentine.

In Florence the beginnings of the new movement appeared toward the end of the fourteenth century in the works of such sculptors as Piero di Giovanni Tedesco, which, though still Gothic, display a new naturalism; and somewhat later in those of Nanni di Banco (d. 1420), showing both naturalism and a remarkable resemblance to Roman portrait statues. The Renaissance achieved a complete victory in the works of Ghiberti, Donatello, and Luca della Robbia—the principal figures in the first half of the fifteenth century. Lorenzo Ghiberti (1378-1455) was es-

entially a goldsmith, achieving his highest triumphs in this art and in bronze relief, in which he attained the highest perfection. His first doors of the Florentine Baptistery, compared with Andrea Pisano's, show the advance of the new art in naturalistic treatment, beauty of form and grace of draperies, richer composition and skill in relief; his famous "Paradise Portals" show besides a masterly treatment of sculptural perspective, in which he surpassed all contemporaries. See Plate under GIBERTI.

The greatest sculptor of the Early Renaissance, and, indeed, one of the greatest of all times, was Donatello (c.1386-1466). Although leavened by the antique, his art was realism of the highest type; he sought the characteristic, even at the sacrifice of beauty. He understood perfectly the handling of the materials, achieving the highest effects, whether in marble or in bronze, and he was equally good in statuary or relief. His art dominated Italian sculpture till the advent of Michelangelo. Michelozzi (1391-1472), his associate, excelled as a bronze-founder, but shows in his own designs a talent sufficiently mediocre. The art of Luca della Robbia (1399-1482) was midway between that of Donatello and Ghiberti, uniting charm of color with beauty of form. His best known achievements are in the celebrated terra-cotta ware which he invented, but in his "Singing Galleries" and other works he showed equal mastery over marble, especially in composition, and he also worked with some success in bronze. His nephew Andrea della Robbia (1437-1528) introduced terra-cottas into the smaller towns of Italy, and, though more sentimental and less dignified than Luca, he produced very graceful works. Other members of the family carried on the art for a century and a half.

During the second half of the fifteenth century the demand for sculpture continued in the main ecclesiastical, and gave occasion for numbers of tombs, pulpits, tabernacles, and friezes. Donatello's principal pupil was Andrea del Verrocchio (1435-88), originally a goldsmith, who worked chiefly in bronze. Though more angular than his master's, his art is powerful and shows a high sense of beauty. In the statue of Bartolommeo Colleoni at Venice he produced the finest equestrian statue of the Renaissance, if not of all times. Another bronze worker of importance was Antonio Pollajuolo (1429-98), whose art, like Verrocchio's, was angular and realistic, but was without his sense of beauty. The marble workers of the later fifteenth century sought to combine beauty of form and charm of presentation with Donatello's naturalism. Desiderio da Settignano (1428-64) added elegance and harmony to Donatello's realism, and did decorative work of the highest order. Bernardo Rossellino (1409-64), though lacking in originality, excelled in architectural arrangement and in his tomb of Leonardo Bruni (Santa Croce) created a model for the Early Renaissance. Antonio Rossellino (1427-78), his younger brother, shows rather the influence of Desiderio in the delicacy and charm of his work. Benedetto da Majano (1442-97), the celebrated architect, continued the same tendencies as a sculptor, and in the pulpit at Santa Croce, the most beautiful of the Renaissance, he solved the problem of perspective in marble carving. Mino da Fiesole (1431-84) is widely known because of the large number

sculpture possesses a certain naïveté and simplicity of treatment which are often mannered. The Italian Renaissance, an independent school, the product of a century in which were sentimentalism and elaborate architectural decoration. A typical Sienese artist was Lorenzo Vecchiotti (d. 1480). The greatest master of the school, Jacopo della Quercia (1371-1438), represents the transition from the Gothic. Neglecting form and detail, he seeks to give his figures life, exhibited in motion. Under Quercia's influence stood Niccolò dell'Arca (1414-91), at Bologna, and he in turn gave impulse to Guido Mazzoni (1450-1518) of Modena, the principal sculptor, during this period, of painted terracotta groups, generally placed in a niche or chapel. He represented, with great realism, the Italian peasant as participant in sacred story—a species of work most popular with the people.

At Padua the influence of Donatello was paramount. In Lombardy, too, the influence came from Florence, with the activity of Michelozzo at Milan, though this school was somewhat influenced by neighboring German art. Its chief characteristics were luxurious decorations and the multiplication of details, executed, however, in a crisp and vigorous style. Its chief monuments are the sculptures of the cathedral at Milan, of the Certosa at Pavia, and of the Colonna Chapel at Bergamo, and the principal masters are Omodeo (d. 1522), Cristoforo Solari (d. 1523), Caradossa (d. 1527), and Bussi (d. 1548). The influence of Milan prevailed throughout the northern part of Italy as far east as Verona.

In Venice sculpture was closely united with architecture. It was richly decorative in character and luxuriant in form, being softer and more sensuous than the Milanese or Florentine. Gothic forms lingered longer here than elsewhere, as is shown in the beautiful Porto della Carta (1438-43) of the Ducal Palace, by Bartolommeo Buon, representing the transition to the Renaissance forms. The later work of Antonio Rizzio, however, belongs to the best that the Early Renaissance has produced. Pietro Lombardo (d. 1515) is thoroughly Renaissance in style, and characteristically Venetian in ornamentation, as may be specially seen in the decorations of Santa Maria dei Miracoli. His sons Tullio and Pietro, together with Alessandro Leopardi (d. 1522), present the remarkable spectacle of artists seeking inspiration in Greek monuments instead of the customary Roman, exactly as Canova did at Venice three centuries later, and achieving fine decorative results.

HIGH RENAISSANCE (sixteenth century). Sculpture now became freer than at any previous period, being no longer dependent upon architecture as in the Gothic epoch, or even upon decoration, as in the fifteenth century. It was allotted a more important place by architecture than previously; indeed, architecture itself became sculpture-like—a framing for statues or monuments. Half colossal or even colossal figures were used in place of the former life-size figures, and new types of biblical subjects were invented. At first there was a deeper study of the antique, which gave a monumental style and universal type; but this soon degenerated into a mannered imitation of the great masters who preceded it.

Florence again furnished the greatest geniuses. Among the first to enter the new path was

Andrea Sansovino (1460-1529), a follower of Verrocchio, called the Raphael of sculpture. With all beauty of form, however, his work shows a lack of originality, and his later statues are mannered. More original in fancy, but not his equal in technique, was Benedetto da Rovezzano (1476-1536), who excelled as a decorator. Torrigiano (1472-1522) introduced the Italian Renaissance into England and into Spain, while Tribolo (1485-1559), a Florentine chiefly active in Bologna, was prevented by misfortunes from attaining the higher rank that his early work promised.

The greatest of the Florentines, and, indeed, the greatest sculptor in modern art, was Michelangelo, 'the man of destiny,' in whose hands were placed the life and death of sculpture. To a perfect knowledge of anatomy and perfect skill in line, he added an equal technical ability in the treatment of the marble. Using the action of the human figure as expressive of emotion, he developed a style which was the culmination of that of Donatello, Quercia, and Signorelli. Its chief characteristics were gigantic, highly developed forms combined with intense dramatic action, and these qualities, which the Italians call *terribilità*, dominated the sculpture of the remaining sixteenth century, and, indeed, of the seventeenth and eighteenth. Not possessing his genius, and impelled by the demand for rapid production, his followers produced works without real feeling and mannered in character. His pupils and followers show no particular individuality. Bandinelli (1488-1560) was, in spite of himself, a mere imitator of Michelangelo, and his pupil Ammanati (1511-92) was even worse. Brilliant exceptions to the general mediocrity were the Florentine bronze sculptors Benvenuto Cellini (1500-71) and Jean Boulogne (1524-1608), by birth a Fleming.

In Venice the chief master was the Florentine Jacopo Sansovino (1477-1570), a pupil of Andrea Sansovino, who modified his style to suit the rich decorative effects demanded there. His pupils, like Girolamo Campagna, produced good work after the rest of Italy had sunk into mannerism. But during the two following centuries came the same decline.

Sculpture of the seventeenth century in Italy was dominated by Giovanni Lorenzo Bernini (1598-1680), active chiefly at Rome. He was a most skillful technician, but in his exaggerated works failed to recognize the limitations of sculpture. His followers, like Algardi and Maderna, lost even the capacity for great ideas, and were hopelessly mannered and extravagant.

THE FRENCH RENAISSANCE. During the fifteenth and still more during the sixteenth century the Italian influence spread throughout Europe, at first propagated by Italian sculptors who were summoned abroad. The Renaissance of sculpture appeared much sooner in Northern Europe than did the Italian influence. Before this event the observation of nature had partially transformed mediæval sculpture and painting, and the ensuing amalgamation produced an art which remained essentially national in character.

During the fifteenth century a style of sculpture prevailed in France analogous to that of the Netherlands, the chief characteristic of which was a pictorial naturalism. The works of Claus Sluter at Dijon exercised a wide influence, and the greatest French sculptor of the period, Michel

Colombe, is said to have been his pupil. Italian influence was greatly strengthened by the expedition of Charles VIII. to Italy, especially through Perreal, the King's director of art. The principal school of the period was at Tours, and its greatest master was Michel Colombe (1432 c.1515), whose work is worthy of comparison with the best of the early Italian Renaissance. He at first worked in the native style, but he gradually combined Italian grace and beauty of form with a rare naturalism. Antoine Juste (d. 1519) and his brother Jean Juste (d. 1534) were Florentines by birth, but even they ultimately adopted the French style of figures.

In the early sixteenth century the patronage of Francis I. greatly promoted the Italian influence, which was stronger in the south than in the north. During the first half of the century decorations like those in the cloisters of Saint Martin at Tours and the choir screen at Chartres rival the most delicate Florentine decoration, and during the latter half of the sixteenth century figure sculpture attained its highest development in the persons of Bontemps, Goujon, and Pilon. Pierre Bontemps, who flourished about the middle of the century, represents the native influence in its powerful naturalism, while Jean Goujon (c.1520-c.72), perhaps the greatest French sculptor of the Renaissance, shows the native style transformed by Italian grace and beauty. He was without a rival in his wonderful manner of filling in architectural space, and portrayed the female figure in beautiful rhythmic lines. Germain Pilon (d. 1590?) possessed a more vigorous talent, being a fine anatomist and a man of science. He was only gradually influenced by the Italian style, which, however, he finally adopted to the extent of occasional mannerism. His best pupil was Prieur (d. 1611). All of these men worked under royal patronage and in close association with the King's architects, whence the excellent decorative character of their work. Outside of Paris local schools at Toulouse, Troyes, and elsewhere show the same tendencies. In Lorraine Richier (1500-57), the French Begarelli, was mediæval in spirit, though finally adopting Renaissance forms.

In the early seventeenth century the Italian influence increased with the stay in Italy of men like Guillaïn and Sarrazin. This influence, however, had changed to the mannered forms of the Baroque, although the Frenchmen tempered it by a certain grace, which was national in character. Under Louis XIV. sculpture became pompous and exaggerated, retaining good decorative qualities. The greatest genius of the century was Pierre Puget (1622-94), a native of Marseilles, whose Italian training shows the influence of Bernini and Algardi. Though often exaggerated in form, his work is of wonderful technical ability and full of Provencal fire. At Court the pompous Girardon (1630-1715) was representative sculptor and the head of a large school. Coysevox (1640-1720) was more original and measured, and his pupils, the brothers Coustou, in the graceful character of their work, foreshadow the eighteenth century.

During the eighteenth century exaggerated form gave place to a sort of courtly grace and delicate sentiment, and sculptors occupied themselves with the rendition of individuality and the technical treatment of marble. A healthy realism, manifesting itself chiefly in por-

traiture, gradually developed. Lemoine designed pompous monuments, and better busts; Bouchardon (d. 1762) is more measured in his characteristic busts and his charming antiques; and Pigalle (d. 1785) united great technical ability with a brilliant temperament. Jacques Caffieri and Augustin Pajou (d. 1809) are chiefly known for their fine and graceful busts; Claude Michel (1738-1810), called "Clodion," executed minor works of household art, of a light and charming character, chiefly in terra-cotta. All that was best in French sculpture of the eighteenth century culminated in Jean Antoine Houdon (1741-1828), a pupil of Lemoine and Pigalle, who, though capable of creating beautiful and ideal works, was chiefly active as a portraitist, in an art essentially realistic and modern.

GERMAN RENAISSANCE. In Germany the emancipation of sculpture from the Gothic was very slow; throughout the fifteenth century we find the influence of the Gothic forms. Its course of development followed that of painting, and so we find German sculpture pictorial in character, richly colored and gilded, and in elaborate Gothic framing. Its chief activity was in large carved altar pieces and religious figures. The chief difference between German sculpture and Italian consists in German lack of the sense of beauty and form. Draperies were not treated to show the outline of the figure, but rather to conceal it. But German sculpture was all the more naturalistic because of the absence of classic influence, and its most pleasing manifestation was the expression and delineation of character in the human face. Even when, in the sixteenth century, the Italian influence entered Germany, it was less important than in other countries. The German schools are divided into two groups; the South German, which is more monumental in character, reflecting the Italian influence; and the North German, which was shaped by the Netherlands.

The most important school was the Franco-German, and its chief centre was at Nuremberg. The first sculptor of prominence there was the well-known painter Michael Wohlgemuth (1434-1519), who designed a large number of wooden altar pieces, the style of which, characterized by earnest expression and minute naturalism, resembles that of his paintings. Veit Stoss (1440-1533), the principal wood carver of the school, executed altar pieces more plastic in character and dramatic in action. His figures were varied and highly individual, but the composition was restless and overcrowded, with too much striving after effect. Contemporary with these masters lived a number of anonymous artists, whose work, like "Our Lady of Sorrows" in the Germanic Museum, shows great ability. The foremost stone-cutter of the Nuremberg school was Adam Kraft (c.1440-1507), whose style is simpler and more dignified than that of Stoss, deeper in feeling, more realistic and careful in execution. The chief bronze-founder of the German Renaissance was Peter Vischer (c.1455-1529). In his works, like the shrine of Saint Sebaldus and the statues of the monument of Maximilian, at Innsbruck, the Italian Renaissance first appears in German sculpture. The same influence appears more prominently in the work of his sons, Hermann and Peter, who assisted him.

In Nether Franconia there were a number of important sculptors, like the master of the

of the latter (d. 1487), whose measured and plastic sense shows some Italian influence, as may be seen in the extent that of Tilman Riemenschneider (d. 1507), the chief master of the Northern school. The work of the Swabian school is characterized by a greater grace and charm, as may be especially seen in the choir stalls of the Münster at Ulm, carved by Jörg Syrlin. This is even more the case in Bavaria and Tyrol, where the chief master, Michael Pacher (d. 1498), displays a German naturalism modulated by a highly developed sense of the beautiful, much like Italian work.

In Middle and Northern Germany the prevailing influence radiated from the Netherlands, producing an art which was pictorial in execution and crowded in composition. The stone monuments of the middle Rhine have perished, but along the lower Rhine and in Northern Germany wood-carving was very generally practiced, the finest surviving monument being the beautiful carved altar of Selhswig (1515-21), by Hans Brüggemann. Its powerful naturalism and high dramatic action show distinct Dutch influence. Fine stone-carving was also done in the mining district of Saxony, near the Bohemian boundary, as may be seen in the beautiful portal of the Church of Amaberg.

After about 1530 foreign artists were mostly employed, Italians in the south, Netherlanders in the north. The Thirty Years' War put an end to all artistic activity. The greatest German artist of the Baroque period, during which foreign artists were chiefly employed, was Andreas Schlüter (1664-1714), active chiefly at Berlin. Though the monumental character of his work shows the influence of Bernini, his conception of form and general treatment were derived from the Netherlands. Raphael Donner (1692-1741) held a similar position in Austria, but his reaction against the Rococo was based on the study of nature and the antique.

OTHER COUNTRIES. The sculptures of the Netherlands were largely destroyed during the Reformation. Here the northern Renaissance began earlier than anywhere else—at the end of the fourteenth century, even preceding the revival of painting. The centre from which this revival proceeded was Dijon, in Burgundy, where under the patronage of the dukes a number of important masters were active, the chief among whom was the Dutchman Claus Sluter. While still Gothic in the draperies, his figures display a powerful naturalism, combined with a high plastic sense. This naturalistic art dominated the Netherlands during the fifteenth century, and it was not until the sixteenth that the Italian influence appeared. It manifested itself chiefly in the charming decorations, but, although good work was produced, no individual artists of prominence are recorded, except Jean Boulogne, whose art was practically Italian. In the seventeenth century the school of Antwerp came into prominence. Francois Duquesnoy (1594-1644), the chief master, has been compared to Rubens, and in spite of his training in the Italian Baroque he maintained some dignity of style. His pupil, Artus Quellinus (1609-88), active chiefly in Amsterdam, had a wide influence in Germany. In the eighteenth century sculpture in the Netherlands declined, the Flemish school showing increasing mannerism, while the Dutch was more naturalistic.

To the early Netherlandish influence prevailing in Spain, succeeded, in the fifteenth century, a transitional, semi-Italian style. Italian artists continued to be summoned to Spain, and in the sixteenth century a more monumental style, the chief characteristic of which is richness of decoration, arose. Sculpture found wide employment in rich altars, retables, and reredoses. The best known representative of this high Renaissance is Berruguete (d. 1561), whose fantastic style was modeled upon Michelangelo. Similarly mannered were the brothers Leoni, chief sculptors to Philip II. In the seventeenth century a realistic reaction, corresponding to that in painting, originated in Andalusia (Seville), the chief representative of which was Martinez Montañes, who sought above all to express energy and character. His pupil Alonzo Cano (1601-67) continued this style in works of an ascetic religious character. In the eighteenth century mannerism reigned supreme.

England depended almost entirely upon importation during this period, of Netherlanders during the fifteenth century, and of Italians during the sixteenth. It remained barren soil during the two following centuries as well, the only names of note being Nicholas Stone, who was associated with the architect Inigo Jones, and Grinling Gibbons (d. 1721), a Dutchman associated with Christopher Wren. Flaxman belongs to the following epoch.

MODERN SCULPTURE.

The reaction upon the extravagancies in form and feeling of Baroque sculpture took the form of a return to classical simplicity. The antique was followed more closely than ever before, as well in subject as in form. Sculpture lost its religious character and became private and aristocratic. With the increasing prominence of national and democratic movements, a demand for a more natural art arose. Finally, in the latter half of the nineteenth century, sculpture began to occupy itself with the actualities of life. The earliest leader of the classical reaction was Antonio Canova (1757-1822), whose life work was done at Rome, where he came under the influence of the movement originated by Winckelmann. His earliest works were in the Baroque, the spirit of which is still evident in his statuary of a classical character, and his art represents the transition from the Baroque to the more purely classical spirit of Bertel Thorvaldsen (1770-1844). A Dane by birth, but a Roman by adoption, the latter became the greatest representative of the classic in modern art. As Canova had excelled in statuary, so he in relief, using the purest Greek work as his models, and producing the highest class of work possible to one expressing himself in the dead forms of a past epoch. From Rome the influence of these men radiated throughout Europe, transforming sculpture.

FRANCE. The chief representatives of the classical school in France were Antoine Denis Chaudet (d. 1810), whose best works were of an ideal character, and Francois Joseph Bosio (d. 1845) and James Pradier (1792-1852), who attained a higher technical perfection by a tendency toward sensuous treatment. Some of Pradier's many pupils manifested within their classical forms a tendency toward naturalism.

Corresponding with the Romantic reaction in painting there came a similar tendency in sculp-

ture, which found its inspiration in the Middle Ages, from which its subjects were largely drawn. Its chief representative was Preault (1809-79), but neither he nor his followers made technical improvements on the classicists. A more important form of the reaction was naturalism, which found its chief early representative in David d'Angers (1780-1856), whose works are a transition from classicism to modern realism. His portrait statues and busts are often not only characteristic, but absolutely realistic. The most prominent figure during the first half of the nineteenth century was François Rude (1784-1855), who also began as a classicist, but soon yielded to an innate naturalism. His "Departure of the Volunteers in 1795" on the Arch of Triumph in Paris was epoch-making in modern sculpture. The same naturalism was applied to the representation of wild animals, the savage strength and character of which was presented with great force by Antoine Louis Barye (1795-1875), and by his pupil Auguste Nicolas Cain (1822-94), who portrayed, though with less ability, the greater pachyderms.

Classical and naturalistic tendencies run parallel in the second half of the nineteenth century with an increasing influence of naturalism. Among the more strictly classical are men like Henri Chapu (1833-91), who worked freely in the Greek spirit, Dumont, Joffroy, and Perraud. In academic circles the romantic and naturalistic tendencies have gained great ground, so much so that the Renaissance rather than antiquity may be considered the source of inspiration in the well-balanced and technically faultless compositions of men like Paul Dubois (1829—). Other important representatives are the clever and versatile Falguière (1831-1900); Antonin Mercié (1845—), whose art is graceful and refined; the fantastic but more highly individual Saint Marceaux (1845—); Bartholdi (1834—), sculptor of the Liberty Statue in New York Harbor; and Louis Ernest Barrias (1841—), whose work is characterized by largeness of treatment.

Jean Baptiste Carpeaux (1827-75), a pupil of Rude, carried his master's naturalism to its logical conclusion in work characterized by great abandon and dramatic power and by a sensuality reminding of Rubens. Emmanuel Frémiet (1824) combined the art of his uncle Rude with that of Barye, being equally successful as an animal and figure sculptor. His works are mostly fine equestrian monuments and genre subjects. Perhaps the greatest works of all have been produced by the later naturalists, who since the misfortunes of 1870, which seem to have had a disciplinary effect upon French art and life, have executed works of the highest order. The two chief leaders were Jules Dalou (1838—) and Auguste Rodin (1840—), who headed the sculptors in the secession of 1890, when, joining with the painters, they formed the salon of Champs de Mars. The former is a realist on the order of Carpeaux, refined by academic training, who endeavors to maintain an historical continuity with French art of the time of Louis XIV. Rodin is probably the greatest sculptor of the century. Scorning all traditions and following nature alone, without regard to elegance of form, he has produced dignified though melancholy statues, which will bear comparison with the best work of all times. A very remark-

able individuality is Bartholomé (1848—), a painter without training in sculpture, who has recently produced masterpieces of the first order, especially in funerary sculpture. There are many other important talents in France whom it is impossible even to mention by name. In sculpture, even more than in painting, Paris has become the school of Europe. The minor arts of sculpture have also been most highly developed. Chaplain and Roty have brought the art of engraving medals to high perfection, and great success in medals as in statuettes has been achieved by Théodore Rivière.

Sculpture in Belgium has not essentially differed from that in France. The realistic movement began in 1830, producing such men as Fraikin (1819-93), Constantin Meunier (1831—), who with fine realism has represented the dignity of labor in a manner reminiscent of Millet, and Lambaux (1852—), who delights in fantastic Rubens-like figures. The naturalism of Jules Lagae (1862—) is even more pronounced, and Charles van der Stappen (1843—) may be said to hold the balance between the two.

ENGLAND. The first representative of the classical reaction in England was John Flaxman (1755-1826), who, with remarkable purity and fine idealism, excelled in designs and relief, his larger sculptural work being often deficient in technique. He was followed by a long series of men much inferior to him, like Westmacott, Chantrey, Bailey, and especially John Gibson (d. 1866), the most important of the group. Their work was cold and elegant, and often deficient in technique. A new spirit, the reaction against cold classicism, came with Alfred Stevens (1817-75), a pupil of Thorwaldsen, who was, however, more influenced by Michelangelo than by the antique, and brought life and personal feeling into English sculpture. John Henry Foley (1818-74), at first classical, in later years became more naturalistic; other representatives of the transition were J. Edgar Boehm (1834-90) and Thomas Woolner (1825-92), who in his later work displayed a higher degree of naturalism.

The greatest change, however, has come over British sculpture since 1870. Among the first to show the new tendency were some of the great painters, especially George F. Watts (1817—), who ranks equally high as a sculptor. His work is grand and original in conception, full and rich in modeling, and broad in treatment. Frederick Leighton (1830-96) is more advanced in his few sculptural efforts than in his painting. The change, however, is mainly due to French influence, especially to Jules Dalou, who was for some years professor in the South Kensington schools. Among those influenced by the French school are Henry Hugh Armistead (1828—), George Simonds (1844—), and Thomas Brock (1847—), whose work is well balanced and excels in line. Hans Thornycroft's (1850—) work, though modern, represents the reaction of the Greeks against the 'Fleshy School' of Carpeaux. Edward Onslow Ford (1852-1901) did work refined and graceful in form and charming in sentiment. The greatest influence of the present day in English sculpture is Alfred Gilbert (1854—), a very versatile artist, treating with high poetic imagination subjects both dignified and light. He has made much use of goldsmith's work in his art, and his example has been followed by many of the younger artists. Other important sculptors of re-

1800-1809), George Schadow (1809-1892), the sculptor of the "Lion of the North," and Albert Stark and John Swan. In France, the sculptor of the "Lion of the North," Albert Stark and John Swan, and the sculptor of the "Lion of the North," Albert Stark and John Swan, who has made fine works in the style of the "Lion of the North."

GERMANY. The first German classicist of importance was Johann Heinrich Dannecker (1758-1827), who established the Stuttgart school. In Berlin, Johann Gottfried Schadow (1764-1850), though a classicist, and superior where the real element was involved, began the introduction of historical sculpture. His principal followers were his son Rudolf Schadow (d. 1822), Christian Friedrich Tieck (1776-1831), and Christian Rauch (1777-1857), the greatest sculptor of the German historical school. Though his sense of form was refined by the antique, Rauch's art was in the main naturalistic, and faithful to historical detail. In a series of fine monumental sculptures he succeeded in the rendition of modern costume. Among his followers were Drake, Bläser, Schiewelbein, Kiss, famous for his animals in bronze, Siemerling, Eneke, and Schweinitz. The tendency of the Berlin school was toward historical and naturalistic sculpture. At Dresden, Ernst Rietschel (1804-61), the best of Rauch's pupils, continued his master's style, with a slight tinge of Romanticism. Ernst Hähnel (1811-91) represents rather the transition from classical to romantic style, while Johannes Schilling (1828-) . Rietschel's most distinguished pupil, shows a tendency toward the Rococo in such works as the National Monument in the Niederwald.

At Munich the tendency was toward Romanticism, modified by the classic style. Konrad Eberhard (1768-1859) executed a large number of medieval subjects, Ludwig Schwanthaler (1802-48), notwithstanding his training under Thorwaldsen, was best in the treatment of national subjects of a romantic character. Not until the end of the nineteenth century did the naturalistic tendency definitely triumph, especially at Berlin in the work of Reinhold Begas (1831-), whose masterpiece is the memorial to William I. (unveiled 1897), and in that of Karl Begas, Eberlein, Geiger, Schott, and others. Much more pronounced is the naturalism, in their sculptural efforts, of the painters Franz Stuck, in Munich, and Max Klinger, at Leipzig, where also Karl Seffner is conspicuous as a realistic portrayer. In Vienna the modern period was ushered in by Fernkorn (1813-78), of Schwanthaler's school, and counts among its chief representatives Zumbusch (1830-), Kundmann (1838-), Weyr (1847-), and, pronouncedly naturalistic, Viktor Tilgner (1844-96). Arthur Strasser (1854-) is especially noted for his polychrome statuary. Among the German sculptors who settled in foreign parts, the most distinguished are Emil Wolff (1802-79) in Rome, and Adolf Hildebrand (1847-) in Florence.

OTHER EUROPEAN COUNTRIES. In Italy the classical tendency has been stronger than elsewhere in Europe, and the ultimate triumph of realism has therefore been more retarded. The chief pupil of Canova was Pietro Tenerani (1789-1858), afterwards an ardent follower of Thorwaldsen. Pompeo Marchesi (1789-1858) is known as the creator of classical statues. The Italian romanticists, though not quite naturalistic with classical tendencies, as may be seen in the works of Bartolini (d. 1850), Paoletti (d. 1847), and Pio Fedi (1815-

92). Far more naturalistic, though still classical, compared with other contemporary European sculptors, were Giovanni Dupré (1817-82), Vincenzo Vela (1822-91), and Giulio Monteverde (1837-). The most important sculptor of the present day is Ettore Ximenes, who has executed a large number of monumental works of importance.

The Scandinavian countries followed the general European development, the Renaissance finding entrance later than elsewhere in Europe. The influences were at first Netherlandish, but during the eighteenth century French masters were mostly employed. In Sergel (1740-1814), Sweden possessed a classicist whose works are said to bear favorable comparison with those of Thorwaldsen. Byström (1783-1848) and Fogelberg (1786-1854) followed in his wake. Sergel's pupils and those of Thorwaldsen in Denmark early tended toward romantic subjects from Norse mythology. Most akin to Thorwaldsen's art was that of Bissen (1798-1868). At present the general tendency in these countries is naturalistic, after French models, and its most prominent exponent is the Norwegian Stefan Sinding (1846-). A strong naturalism, combined with sharp characterization, is also the principal trait of Russian sculpture, which is of very recent growth. The best known artists are Lanceray, whose bronzes are full of spirited action combined with detailed execution, and Lieberich (1828-), a sculptor of animals.

UNITED STATES. Neither distinguished foreigners like the Italian Cerachi and the Frenchman Houdon, who came to America during the eighteenth century, nor self-taught Americans like William Rusk (1757-1853), of Philadelphia, and John Frazee (1790-1852), had any influence on the development of American sculpture. The first artists of prominence belong to the school of Canova and Thorwaldsen. The first to go to Rome was Horatio Greenough (1805-52), who executed portrait statues, like Washington as the Olympian Zeus, in classical garb, and a number of refined busts. Hiram Powers (1805-73), whose "Greek Slave" is well known, was a conscientious artist. Thomas Crawford (1813-57) was more original, mingling the classical spirit with American sentiment. Erastus Dow Palmer (1817-), William Wetmore Story (1819-96), and Randolph Rogers (1825-92) were less important representatives of the same group. John Rogers (1829-) appealed to sentiment and everyday incident by statuettes groups of military and domestic subjects. The most able of the later American classicists were William Henry Rinehart (1825-74), who did both ideal works and public monuments in a pure dignified style, and Harriet Hosmer (1830-), the favorite pupil of the English sculptor Gibson. Only two prominent sculptors of the early period were distinctly national in spirit. Henry Kirke Brown (1814-86) executed public monuments with a vigorous style, and his pupil J. Q. A. Ward (1830-) is widely known for his statues and statuettes of Indians and negroes. Ward's remarkable gifts of composition and form have raised him to the highest rank among American artists.

Since about the time of the Centennial Exposition (1876) classicism has ceased to influence American art. A number of sculptors like Ephraim Keyser (1850-), of Baltimore, have had German training, while others have remained

in Italy, but by far the most important influence has come from Paris. Howard Roberts (1845—) was the first to show French influence; Olin Levi Warner (1844-96), a pupil of the *École des Beaux-Arts*, had executed strong character-istic busts and portrait statues, as well as work in higher relief, when his life was terminated by an accident. Augustus Saint Gaudens (1848—) has gained remarkable fame from the decorative and illustrative character of his work. Daniel Chester French (1850—), whose training is chiefly American, is a master of sentiment treated in sculpture with infallible good taste and in remarkably pure forms. More thoroughly Parisian is Frederick MacMonnies (1863—), a pupil of Saint Gaudens, who in a nervous, highly modern style has executed a number of statues of good taste and powerful realism. Herbert Adams, although modern and realistic, has found inspiration in the Florentine Renaissance, with the best products of which his works bear favorable comparison.

Besides these artists mention should be made of William Ordway Partridge; Paul Bartlett, the author of the Lafayette statue in Paris; Karl Bitter, who has designed much architectural sculpture for great buildings; Charles H. Niehaus, a master of modeling; J. Massey Rhind, who had done good decorative work; A. P. Proctor, the sculptor of Indian life; Edward Kemys, who has portrayed in an admirable manner American native animals. Among younger sculptors George Gray Barnard has recently attracted attention by his difficult and ambitious projects.

BIBLIOGRAPHY. For the history of sculpture in general, consult: Lübke, *Geschichte der Plastik* (3d ed., 1880; Eng. transl., London, 1872); Viardot, *Les merveilles de la sculpture* (Paris, 1869); and Marquand and Frothingham's excellent and reliable *Text-book of the History of Sculpture* (New York, 1901). For Greek and Greco-Roman sculpture, Brunn, *Geschichte der griechischen Künstler* (Stuttgart, 1891), and Overbeck, *Geschichte der griechischen Plastik* (Leipzig, 1894). There is no general dictionary of sculptors and sculpture, as there are of painting and architecture. The earliest work on Italian sculpture is that of Cicognara (Venice, 1813-18); the most refined and appreciative commentary is still Burckhardt's *Cicerone* (10th ed., Leipzig, 1900). See also Raymond, *La sculpture florentine* (Florence, 1898-1900); Bode, *Italienische Bildhauer der Renaissance* (Berlin, 1887). In English the most comprehensive treatment is Perkins, *Tuscan Sculptors* (London, 1864), and *Italian Sculptors* (ib., 1868); see also his *Historical Handbook of Italian Sculpture* (New York, 1883); and the latest works: Freeman, *Italian Sculpture of the Renaissance* (London, 1901), and Hurl, *Tuscan Sculpture* (New York, 1902), the latter popular in character. For France the most extensive work is Goussier, *La sculpture française* (Paris, 1895); see also Lami, *Dictionnaire des sculpteurs de l'école française* (ib., 1898); Brownell, *French Art* (New York, 1901); *Französische Skulpturen der Neuzeit* (139 heliogravures, Berlin, 1896-97); Lady Dilke, *French Architects and Sculptors of the Eighteenth Century* (London, 1900); and the general works on the French Renaissance. (See RENAISSANCE.) For the nineteenth century, consult especially the monographs in the *Gazette des Beaux-Arts*. German sculpture up to the nineteenth century is best discussed in Bode,

Geschichte der deutschen Plastik (Berlin, 1885); for the modern period, see Hedlmeyer (Munich, 1901); and for illustrations, Arthur Schulz (Berlin, 1900). Consult also Spielmann, *British Sculpture of Today* (London, 1901); Collin, *Masters of American Sculpture* (New York, 1903).

SCULPTURE SOCIETY, NATIONAL. A society formed in New York in 1893 to foster the taste for, and encourage the production of, ideal sculpture for the household and museum; to promote the decoration of public buildings, squares, and parks with sculpture of a high class; to improve the quality of the sculptor's art as applied to industries; and to provide from time to time for exhibitions of sculpture and objects of industrial art into which sculpture enters. There are two classes of members—sculptors and non-sculptors. The number of members in 1903 was about 80 of the former class, and about 250 of the second.

SCUP (contracted from North American Indian *nishcup*, from *nishcuppe*, large scaled, thick-scaled). **SCURVAC**, or **POGAY**. A fish (*Stenotomus chrysops*) of the family Sparidae (q.v.) resembling the sheep-head (q.v.). Very abundant off the eastern coast of the United States south of Cape Cod, and highly valued as a toothsome food-fish. It is brown,

THE SCUP

with bright reflections, and about a foot in length. It approaches the coast to spawn among the eel grass in early summer, and feeds mainly upon mollusks, sand worms, and other animal matter. This habit makes it exceedingly useful as a scavenger, and it congregates near fertilizer factories and similar places where oil is thrown into the sea. It is especially liked in Southern markets, where it is called pogy, as also is a Southern congener (*Stenotomus arcutatus*). Compare Pogey. Consult Goode, *Fishery Industries*, sec. 3. (Washington, 1884).

SCURVY (variant of *scurfu*, from *scurf*, AS. *scurf*, *seora*; OHG. *scurf*, Ger. *Schurf*, *scurt*, from AS. *seorfan*, OHG. *scurfan*, Ger. *scurfen*, to gnaw, scratch), or **SCORRUS**. A constitutional disease, characterized by profound alterations in the blood resulting in hemorrhages beneath the skin, mucous membranes, and in other parts of the body, and by a spongy condition of the gums, anemia, and great weakness. It is induced chiefly by the deprivation of fresh vegetable food, and is not contagious. From the earliest times until the beginning of the nineteenth century scurvy had been the scourge of sailors. The cause was the exclusive diet then prevalent aboard ship of salt meat and hard bread, with a deficient and impure supply of drinking water, upon which

scorbutic, and continued to subsist on long voyages. Since the beginning of the nineteenth century scurvy has become comparatively rare. The better voyages of modern times, owing to the introduction of steam, and the compulsory carrying of fresh meat, vegetables, and lemon or orange, have made the disease almost unknown at sea, although it is still found on land among garrisons and in prisons, in starving, isolated communities, and among improperly fed infants.

Scurvy generally comes on slowly, with loss of color, weakness and apathy, and pains in the neck and limbs. In a week or more small hemorrhages (petechiæ) occur under the skin in various parts of the body. The spots are small, gray or reddish brown, some of them resembling pinpoints. Later there may be seen large extravasations of blood into the eyelids, and tense rawny swellings will be found at the bend of the elbows or knees, in front of the tibia, and under the angle of the jaw, due to the effusion of blood or serum into or between the soft tissues and the bones. The gums become swollen, spongy, ulcerated, and bleed at the slightest touch. The teeth may loosen or even fall out. It is a curious fact that in toothless infants and elderly persons the gums are but little affected. When the disease has lasted for some time the patient has a sallow, bloated look, is short of breath, subject to fainting spells, and quite unable to exert himself mentally or physically. Nose-bleed and swelling of the feet often occur. An affection of the vision known as *hemeralopia* may be an early symptom. This consists of entire blindness in the dusk or darkness, without interference with the sight during the day. Death takes place after several weeks from exhaustion or hemorrhage unless suitable treatment is instituted.

Children from six months to two years old are sometimes attacked with scorbutus (*infantile scurvy* or Barlow's disease), the essential lesion of which is a subperiosteal hemorrhage, which causes thickening and tenderness along the shafts of the bones. It occurs as a result of exclusive feeding with condensed milk, the various prepared infant's foods, or sterilized milk. The disease is often associated with rickets, and is characterized by an earthy pallor, spongy and bleeding gums, after dentition, and the swelling of the limbs referred to above.

Treatment depends on the use of an abundance of fresh vegetable food, such as onions, mashed potatoes, cabbage, lettuce, and spinach, with fresh meat, and the administration of lime, lemon, or orange juice in doses of three or four ounces daily. In infants the orange juice and the restoration of a diet suitable to the age will be sufficient. When the mouth is sore and mastication is impossible, milk, beef tea, broth, and eggs may be given. For the prevention of scurvy in time of war, or on shipboard or in places where fresh food is scarce, canned vegetables will take the place of fresh to a great extent. In addition to these, an ounce of lemon juice daily, or the addition of the malates, citrates, tartrates, and lactates of potassium to the food or drink will be found efficient preventives. The law requires merchant ships to serve lime juice to each man daily after ten days at sea. This is mixed with a small percentage of brandy, whisky, or other spirits.

SCURVY-GRASS (*Cochlearia*). A genus of small annual, biennial, or rarely perennial plants of the natural order Cruciferae with an acrid biting taste, due to the pungent volatile oil characteristic of horse-radish. Common scurvy-grass (*Cochlearia officinalis*), which is sometimes a foot high, is a very variable, widely distributed plant in rocky and muddy places, on high mountains, in Arctic regions, and on seashores throughout the world. It was formerly valued by sailors as a preventive of or remedy for scurvy.

SCUTAGE, or **ESCUAGE** (Lat. *scutum*, shield). A pecuniary tax sometimes levied by the Crown, in feudal times, as a substitute for the personal service of the vassal.

SCUTARI, skōō'tá-rê (Turk. *Ishkodra*). A town of Albania, the capital of the Turkish Vilayet of Scutari, situated at the southern end of the Lake of Scutari, 12 miles from the Adriatic (Map: Balkan Peninsula, B 3). It is a fortified town dominated by a citadel. It has some manufactories, a bazaar, and yards for building coasting vessels. There is an export trade in skins, woolsens, stomach, and grain. Scutari, the ancient Scodra, fell into the hands of the Romans in B. C. 168. At the close of the Middle Ages it was in the hands of the Venetians. In 1477 it withstood an eight months' siege by the Sultan Mohammed II., but two years later was ceded to the Porte. Population, about 36,000.

SCUTARI (Turk. *Uşküdar*). A town of Asia Minor, on the eastern shore of the Bosphorus, opposite Constantinople, of which it is a suburb (Map: Turkey in Asia, C 2). It contains several mosques, bazaars, baths, colleges, and schools. There are manufactories of silks, cotton fabrics, and leather. Scutari is the rendezvous and starting point of caravans trading with the interior of Asia. It has long been famed for its extensive cemeteries, adorned with magnificent cypresses, the chosen resting-place of many of the Turks of Constantinople. The town acquired notoriety during the Russian War (1853-56), when the enormous barracks built by Sultan Mahmud were occupied by the English troops, and formed the scene of Lady Nightingale's labors. Scutari occupies the site of the ancient Chrysopolis. About two miles to the south lies the village of Kadiköi, the ancient Chalcedon. Population, estimated at 80,000.

SCYLAX, sí'láks (Lat., from Gk. Σκύλαξ, *Skylax*). A Greek geographer of the sixth century B. C. Herodotus (4, 44) says that he was sent by Darius Hystaspis, probably about B. C. 508, to explore the lower course of the Indus, and then sailed west through the Indian Ocean and the Red Sea, completing the voyage in thirty months. The *Periplus* now extant and bearing the name of Scylax (edited by Fabricius, 1883) is almost certainly of the fourth century B. C.

SCYLLA (sí'lá) **AND CHARYBDIS**, ká-ríb'dis (Lat., from Gk. Σκύλλα, *Skylia*, and Χάρυβδις, *Charubdis*). Two sea monsters described in the *Odyssey* (xii. 73 ff.), personifications of the dangers of navigation near rocks and eddies. Scylla is described as dwelling in a cave in a precipitous cliff, a monster with twelve feet, and six long necks, each bearing a head with three rows of teeth. With these she devours any prey that comes within reach, and snatches six men from

the ship of Odysseus. Opposite her, a bowshot's distance, is a low rock, where under a wild fig-tree Charybdis sucks in and belches forth the water three times daily, and nothing that comes near can escape. This dangerous passage, where it was impossible to avoid both dangers, was early localized by Greek travelers at the Straits of Messina. In Homer Scylla's mother is called Cratais, but later legend told many stories about her, which in general relate that she was a beautiful maiden, beloved by a god (as Glaucus or Poseidon) and transformed by a jealous rival, Circe or Amphitrite. The Greeks of the Saronic Gulf told how Scylla, daughter of Nisus, King of Megara, won by her love or a bribe, betrayed her father to Minos of Crete. Minos, however, disgusted by her unnatural treachery, dragged her at his rudder until she was transformed into the monster of the sea-bird Ciris, which is always pursued by the sea-eagle into which Nisus had been changed.

SCYLLIS, sil'is (Lat., from Gk. Σκύλλης, *Skyl-lis*). An early Greek sculptor whose name is associated with that of Dipenus. See DIPENUS AND SCYLLIS.

SCYPHOZOA, sī'fō-zō'ā (Neo-Lat. nom. pl., from Gk. σκύφος, *skypφος*, cup + ζῷον, *zōon*, animal). A class of Celerentata (q.v.) characterized by the scyphistoma or polyp-like early stage. See MEDUSA.

SCYROS, sī'rōs. An island in the Aegean Sea, the largest of the northern Sporades, 25 miles northeast of Cape Kumi, Euboea (Map: Greece, F 3). Length, 19 miles; area, 77 square miles. Skyros is mountainous and uncultivated in the south, but the northern part has fertile plains which produce excellent wheat. The principal industries are vine growing and the raising of sheep and goats. The only town on the island is Skyros, built on a high peak on the eastern coast, the broad summit of which is occupied by the ruins of a castle, and was the site of the lofty 'Scyros' of Homer. The island is connected with the Homeric legends of Theseus and Achilles. Population, in 1896, 3512.

SCYTHIA, sith'i'ā (Lat., from Gk. Σκυθία, *Skythia*). According to the ancient Greeks, a vast, undefined region, lying north and east of the Black and Caspian seas, and inhabited by a large number of barbarous nomadic tribes; though in a more restricted sense the Scythians are identified with the Scoloti, who inhabited the plains of Southeastern Europe. These tribes have been thought to be of Mongolian origin, but the prevalent modern opinion is that they belonged to the Indo-European family. They are frequently mentioned by Herodotus (see especially book iv.) and other Greek writers, and are described as herdsmen without settled abodes, living like Gypsies in tent-covered wagons, cruel in war and filthy in their habits. In the seventh century B.C. they invaded Media and were driven off by Cyaxares only after a ten years' struggle. Darius invaded their country about B.C. 508, but retreated after heavy losses from attacks and from the hardships of the trackless country. The Scythians of Europe were finally overcome and exterminated or assimilated by the Sarmatians, who afterwards occupied their country. In the farther East, however, the Scythian tribes maintained themselves, and invaded Parthia and In-

dia, where their leaders adopted Buddhism and established dynasties that lasted to centuries. To the Romans, *Scythia* meant the little-known wastes of Northern Asia, from the river Volga to India and China. Consult: Neumann, *Die Hellenen im Skythienlande* (Berlin, 1855); Reichardt, *Landeskunde von Skythien* (Halle, 1889); Krause, *Turisko Land* (Glogau, 1891); Latyschev, *Scythica et Caucasica* (Saint Petersburg, 1893).

SCYTHOPOLIS (Lat., from Gk. Σκυθόπολις, *Skuthopolis*). The classical name of a town of Palestine, the biblical Beth-shean or Beth-shan, the modern Beisan, about 15 miles south of the Sea of Galilee and 3 miles west of the Jordan. Although assigned to the tribe of Manasseh (Josh. xvii, 11, 16), the original Canaanites kept possession of it (Jud. i, 27), and it is not until the days of Solomon that we find it in the hands of the Hebrews (I. Kings iv, 12). When Saul and his sons fell in the battle of Gilboa, the Philistines fastened their bodies to the wall of Beth-shean, whence the men of Jabesh-gilead afterwards removed them (I. Sam. xxxi, 10-13; II. Sam. xxi, 12). Beth-shean was called Scythopolis in the third century B.C., at which time it was tributary to the Ptolemies. It belonged to the Decapolis. It was the seat of a Christian bishopric in the fourth century. There are extensive ruins in the neighborhood of the modern town.

SEA. See OCEAN.

SEA, LAWS OF THE. See MARITIME LAW; NAVIGATION LAWS.

SEA ADDER. The fifteen-spined stickleback (q.v.).

SEA-ANEMONE. The name applied to polyps or zoöphytes (Actinozoa) which do not secrete a coral-stock, and resemble flowers, especially those of the mesembryanthemum. They are also called actinians. They are practically stationary, though they can slowly move over the surface of the rock to which they are attached. They are in general as broad as high, and more or less vase-like, the mouth being surrounded by one or more circles of tentacles. They may attain a diameter of several inches, though few are ever more than three inches across. The common actinian of our coast (*Actinobola marginata*) is to be found between tide-marks on rocks under seaweed, in tidal pools, but grows most luxuriantly on the piles of wharves and bridges. In the tentacles are lodged the lasso-cells, or nematocysts (q.v.), by which it obtains its prey. When a passing shrimp or small fish comes in contact with certain tentacles, the barbed thread is thrown out from the lasso-cell; these paralyze the victim, and the other tentacles assist in dragging it into the distensible mouth, where it is partly digested, the process being completed in the second or lower division of the digestive canal. At the base of certain tentacles are the eye-specks. The process of taking food is almost purely reflex.

Nearly all actinians multiply by budding, as well as by eggs. The new individuals arise at the base of the body, sometimes as many as twenty young ones growing out from the base, and finally becoming free. Adult sea-anemones in rare cases subdivide longitudinally. (See SCHIZOGONY.) The young grow up without any

in the mouth, but in Ceriantius, which is a colonial form, buried in the mud or fine sand, it secretes a leathery tube, the space of which opens out at the end of the tube. The young of the European Ceriantius, as well as Edwardsia, unlike those of other actinians, lives at the surface, being free-swimming. Consult Gosse, *The Aquarium* (London, 1854); *Bot. Sea Anemones and Corals* (ib., 1858); E. C. and A. Agassiz, *Sensory Studies in Natural History* (Boston, 1871); Arnold, *The Sea Beach at Low Tide* (New York, 1900).

SEA-BASS. A large family (Serranide) of marine, perch-like fishes, abounding in all warm seas and in some fresh waters. They remain as a rule in comparatively deep water, except when they approach the shore for spawning in the early summer; are carnivorous, feeding near the bottom; are powerful swimmers and leapers; are often very handsomely colored and marked; and are excellent food. Some have commercial importance (see FISHERIES), while others are prominent among game fishes. About 60 genera and 400 species are recognized in the family as now delineated. (For classification, see Jordan and Eigenmann, *Bulletin* VIII., United States Fish Commission, Washington, 1888; and Boulenger, *Catalogue of Teleostean Fishes in the British Museum*, vol. I., London, 1895). A typical species and the one best known under this name in the United States is the black sea-bass (*Centropristis striatus*), illustrated in the Colored Plate of FOOD-FISHES, with the article FISH AS FOOD. It is about 18 inches long and three pounds in weight, and is dusky brown or black, more or less mottled, and with pale longitudinal streaks. It is numerous along the Atlantic coast from Cape Ann to Florida, and is one of the most highly esteemed fishes for the table. Local names for it are 'blackfish,' 'black Harry,' 'hannahill,' and 'tallywag.' This species is of special interest to fish-culturists as the one with which Mather, in 1874, first succeeded in producing artificial fertilization, and demonstrated the practicability of modern methods.

Other prominent marine Serranide in America are the jew-fishes, nigger-fishes, groupers, hinds, gasas, scamps, squirrel-fishes, and yellowtails. The typical genus *Serranus* is represented in Europe and in Eastern waters by familiar and useful species frequently called sea-perches, of which a very handsome Eastern one (*Serranus marginatus*) is well known on Japanese and Philippine coasts. See Colored Plate of FISHES or THE PHILIPPINES. Consult general works on ichthyology (see FISH); and for American forms especially the writings of Goode, Bean, and Jordan.

SEA-BREAM. A British name for several fishes of the family Sparidae (q.v.), especially a common and useful species (*Pagellus centrodontes*) of the European coast. The name is sometimes given to the American 'sailor's choice' (*Liandrus rhomboides*). See BREAM.

SEA'BRIGHT. A borough in Monmouth County, N. J., 27 miles south of New York City; on the Central Railroad of New Jersey (Map; New Jersey, E 31). It is chiefly important as a residential place and as a summer resort. It had a population of 800. Population, in 1900, 1,198.

SEA'BURY, SAMUEL (1729-96). The first bishop of the Episcopal Church in America. He was born at Groton, Conn., graduated at Yale in 1748, and later studied medicine and theology at Edinburgh. He was ordained deacon and priest at the end of 1753, and returned to America five months later, engaging in pastoral work first at New Brunswick, N. J., then at Jamaica, L. I. (1757-66), and at Westchester, N. Y. (1766-75). He was obliged to resign his parish owing to his loyalist or Tory sentiments, which he advocated in able pamphlets, suffering imprisonment and practical exile for his convictions. In March, 1783, he was elected bishop by the fourteen Episcopal clergymen then resident in Connecticut, and went to London to seek consecration from the English prelates. But various difficulties, chiefly political, stood in the way of their action; and, after waiting more than a year, he made the same request of the bishops of the Episcopal Church in Scotland. They, unhampered by any connection with the State, were willing to act, and Seabury was accordingly consecrated on November 14, 1784, by the Bishops of Aberdeen and Moray and Ross, and the Coadjutor Bishop of Aberdeen. He returned to America the following summer, and was more or less formally recognized as in charge not only of Connecticut, but of all New England. The validity of his consecration was, however, denied by some in the Middle and Southern States; and the question was not finally set at rest until the General Convention of 1789 formally declared in favor of it by a unanimous vote. He died at New London, Conn. Consult Beardstley, *Life and Correspondence of Samuel Seabury* (Boston, 1881), and the authorities referred to under EPISCOPAL CHURCH.

SEABURY, SAMUEL (1801-72). A Protestant Episcopal clergyman, grandson of Bishop Samuel Seabury. He was born at New London, Conn.; was ordained priest in the Protestant Episcopal Church in 1828; was editor of *The Churchman*, 1831-49; rector in New York City, 1838-68; and professor of biblical learning in the General Theological Seminary, 1862-72. He published: *The Continuity of the Church of England in the Sixteenth Century* (1853); *Supremacy and Obligation of Conscience* (1860); *American Slavery Justified* (1861); *The Theory and Use of the Church Calendar* (1872); *Discourses on the Holy Spirit* (edited by his son, with memoir) (1874).

SEA-BUTTERFLY. A pteropod mollusk (*Cione papilionacea*), a beautiful and rather large flesh-pink form, common in the Arctic seas, where it forms the food of the baleen whale, and is called by the whalers 'brit.' It has been observed on the Labrador coast rising and sinking in the water among the cakes of floe-ice, and is said to have been detected as far south as New York. It is an inch long, the body fleshy, not protected by a shell, the 'wings' being rather small.

SEA-CLAM. A large bivalve of the north-eastern Atlantic coast (*Maetra solidissima*); it inhabits rather deep water, but is often cast ashore in large quantities, and is useful as bait.

SEACOAST ARTILLERY. See COAST ARTILLERY; ORDNANCE.

SEA-COW. A huge, herbivorous, aquatic mammal of the order Sirenia (q.v.). The name

applies specifically to the extinct rytina or Arctic sea-cow (*Rhytina Stelleri*), which once frequented Bering Straits, but was exterminated about 1767 by seal-hunters and sailors who found its beef-like flesh excellent eating. When discovered by Bering's expedition in 1741, it lived only on Bering and Copper Islands. G. W. Steller, the naturalist of the expedition, made sketches and wrote an account of the animal, which he describes as 24 to 30 feet long, with a girth of 19 or 20 feet and weighing about 8000 pounds. The head was small, and the jaws had, instead of teeth, horny pads similar to those in the mouth of the dugong. The skin was very thick, dark-colored, and rough. The rytina was gregarious, and dwelt in herds about the mouths of streams, where it lived on seaweeds. It was unable to dive, and hence was restricted to shallow water, where its feeding was often prevented by ice, so that in winter many starved. It was stupid, sluggish, and comparatively helpless. Stejneger's writings in the *Proceedings of the United States National Museum*, vol. vii. (1884), and in *The American Naturalist*, vol. xxi. (1887), contain most of what is known of this extinct ræe. Consult also Nordenskjöld, *Voyage of the Vega* (New York, 1881).

SEA-CUCUMBER. A holothurian (q.v.). The name, which refers to the shape, is appropriate only for certain of the pedate species, most of the footless forms being more or less elongated and worm-like. Compare TREPANG.

SEA-DEVIL. A devil-fish; especially the great ray (*Manta birostris*).

SEA-EAGLE. See EAGLE.

SEA-ELEPHANT. See ELEPHANT-SEAL; and Colored Plate of SEALS.

SEA-FAN. An alcyonarian (q.v.) coral, in which the form of the colony is not unlike that of a fan, being very greatly flattened, so that it becomes wide and high but very thin. Moreover, it is not solid, but consists of an open network, with the meshes of comparatively small size. The forms to which the name is most popularly given are species of *Gorgonia*, and especially the common West Indian species, *Gorgonia flabellum*. Fine specimens are sometimes four feet high and nearly as far across. The color is very variable, but is usually yellow or dull reddish purple. Sea-fans are sparingly represented in a fossil state; only a few forms are known from Cretaceous and Tertiary rocks. See GORGONACEA.

SEAHAM (sē'am) **HARBOR.** A seaport in the County of Durham, England, 5 miles south of Sunderland (Map; England, E 2). It has a finely equipped harbor, a seaman's infirmary, and the Londonderry Literary Institute. Bottle works, blast furnaces, an iron foundry, and chemical works are its principal industrial establishments. The chief article of export is coal. Seaham was founded in 1828 by the Marquis of Londonderry. Population, in 1901, 19,200.

SEA-HOLLY. See EBYNGO.

SEA-HORSE. One of the small strange syngnathous fishes of the pipefish family, which constitute the genus *Hippocampus* and its near allies, and take their name from the rude resemblance of the head to that of a horse. The body is compressed, with an elongated tail, and the integument is a series of large, rectangular

bony plates, with a series of spines and projections along the lines of juncture. These spines, together with the divided, streamer-like fins of some species, give them a strong resemblance to the seaweeds among which they live. There are about 20 species in various warm and temperate seas. All keep near shore, often developing in brackish water; and as their powers of swimming are feeble, they have become able, by the development of prehensibility in the tail, to cling firmly to weeds and other supports and so resist being swept away. Like the pipefishes (q.v.), the males take charge of the eggs, which are placed in an abdominal pouch, and remain there until they hatch; and for

A SEA-HORSE.

some time afterwards the fry will, when alarmed, return to the shelter of the pouch. Consult Gunther, *Introduction to the Study of Fishes* (London, 1880).

SEA ISLANDS. A group of low sandy or marshy islands on the coast of South Carolina between Charleston and Savannah. They are separated from the mainland by a series of lagoons, sounds, and narrow, tortuous channels. Their soil is especially well adapted for rice and cotton, the latter, for which the islands are celebrated, being a fine, long-stapled variety.

SEA-KALE, or CRAMBE (*Crambe maritima*). A perennial plant of the natural order Cruciferae native to European seacoasts. Its blanched sprouts are eaten like asparagus. Sea-kale is especially popular in England, but is grown to a limited extent elsewhere. Sea-kale is generally propagated by offsets or cuttings of the roots, and sometimes by seed. A plantation remains productive for several years.

SEAL (OE, *seol*, *seol*, Fr. *scellu*, from Lat. *sigillum*, seal, mark, diminutive of *signum*, sign, mark, token). By ancient common law a seal must consist of a piece of wax, lead, or other tenacious metal or substance, stamped with words or a device, according to the fancy of the person adopting it. At present two of the most common devices are: a circular bit of paper stamped in some manner and attached to the instrument by mouflage; the impress of a design or words in the paper of the instrument itself by means of a die.

Introduced at a time when practically only the clergy could write, and used for a long time instead of signatures on private writings, etc., as well as legal instruments, seals did not originally invest an instrument with any distinctive solemnity, but after the art of writing became a common accomplishment and most private writings, not of a legal nature, were signed instead of sealed, the courts began to attach a peculiar and

of the seal as a legal instrument as well as a means of sealing merely a signature. The seal has become a means of transfer of property, and all conveyances were recorded under seal. The most important consideration in the use of a seal was that it afforded an important consideration for a promise or obligation contained in a sealed instrument.

However, today in the United States the matters of the necessity for a seal on various instruments and the kind of a seal required when necessary are almost wholly regulated by statutes. In New York and Connecticut the word 'seal' or the Latin abbreviation 'L.S.' written on the instrument, are recognized as sufficient substitutes for seals; and in Arkansas, California, Florida, Illinois, Indiana, Maryland, Michigan, Missouri, New Mexico, North Carolina, Oregon, Pennsylvania, South Carolina, Virginia, and West Virginia, a scroll executed with a pen will be sufficient. In New Jersey, Minnesota, Wisconsin, and Wyoming any device or flourish with the pen will be recognized as a seal if intended as such.

In the following States the common-law distinction between sealed and unsealed instruments has been abolished by statutes: Arkansas, California, North Dakota, South Dakota, Mississippi, Indiana, Kentucky, and Tennessee.

It is not necessary for individuals to use seals in Arizona, Colorado, Idaho, Iowa, Kansas, Nebraska, Nevada, Ohio, Utah, and Washington. Most States, however, require a seal on instruments executed by corporations. Public officers are usually required to have official seals and all important public documents must be impressed with the proper seal.

The courts will usually recognize without proof the seals of nations and of the various States of the United States, the seals of superior courts and of public officers within their own State, including notarial seals. See CONTRACT; CONSIDERATION; NOTARY PUBLIC, and consult "History and Use of Seals in England," in vol. xviii. of *Archæologia* (London); Blackstone, *Commentaries*; Parsons, *On Contracts*.

SEAL (AS. *seol*, *siol*, OHG. *selah*, *selach*, seal). A carnivorous aquatic mammal of the suborder Pinnipedia, without tusk-like canines in the upper jaw; any pinniped except the walrus. Seals are specially modified for their aquatic life, particularly in the structure of the limbs. The upper arm and forearm of the front limb, and the two corresponding parts of the hind limb, are very short and more or less imbedded in the tissues of the body, while the hands and feet, especially the latter, are greatly enlarged and fully webbed. Five well-developed digits are present in all cases, but in the hind limbs the outer and inner digits are stouter and often longer than the other three. There are no clavicles in the shoulder girdle, and the limbs are poorly adapted for use on land. The tail is always very short, but the hind limbs often serve the purpose of a rudder. The body is sleek and graceful, tapering posteriorly as in cetaceans (q. v.), but the head is always distinct and well formed. The whole surface of the animal develops a hairy covering, even the palms of the hands and soles of the feet being thus protected in the true seals. There are always fewer than twelve incisor teeth, and usually four premolars and only

one molar are present on each side of the head, in each jaw. The brain is large and much convoluted, and seals exhibit much intelligence. The eyes are large and exposed, with flat corneas, and external ears, though small, are often present.

Although so specially adapted to their aquatic life, seals come to shore or upon ice-floes to mate and to bring forth their young. One or two young are produced at a time, not oftener than once a year. Seals are polygamous and the males fight savagely for the possession of the females. As the pairing occurs soon after the birth of the young, the latter, known as 'pups,' are often neglected and many die. During the breeding season the males do not eat, and it is said they sometimes endure three months of abstinence. The food consists of various marine animals, chiefly fish, squids, and crustaceans; possibly vegetable food is also used at times. It is a curious fact that seals often swallow pebbles and even large stones, which are frequently found in their stomachs, but the purpose is not clearly understood. They are regurgitated, as are also the indigestible parts of the food, such as fish-bones and squids' beaks. Seals are large eaters, the remains of more than 200 squids having been found in a single fur-seal at one time, although digestion is very rapid. The food is masticated little or not at all, fishes being usually bolted head first. In the capture of their food, as in all their movements in the water, seals are quick and graceful. On land, however, their movements are awkward and progression is chiefly effected by a succession of jerks caused by the upward bending and sudden straightening of the spine, which is remarkably flexible, the limbs being little used by the true seals; the eared seals move mainly by the aid of the limbs. Food is not normally taken on land, and in pursuit of it seals are capable of remaining under water for long periods of time, respiration being very slow.

As regards the intelligence of seals there seems to be considerable difference of opinion, according to the opportunities and point of view of the observer. In captivity some species of seal have shown considerable readiness to learn tricks of more or less difficulty, and trained seals have often been exhibited. On the other hand, observations made on the fur-seal in its native haunts seem to show that while the instincts are strong, there is little real intelligence, and ordinarily stupidity is a marked characteristic. The homing instinct is very strong in most seals, and they will return year after year to their breeding grounds, even though they are sure to meet with slaughter. Most species are also very gregarious, and in their herds they constantly tend to imitate each other, so that they follow their leaders in a perfectly unreasoning way.

Seals are widely distributed in all parts of the oceanic world, but especially in the colder regions. A few species occur in the tropics and temperate regions, but it is in the Arctic and Antarctic parts of the ocean that seals really abound. There they swarm on rocky coasts and on ice-floes during the breeding season, and in the water during the rest of the year. Although seals are normally marine, two species inhabit the Caspian Sea and Lake Baikal.

The classification of the seals and the limits of the species are still much debated subjects and

SEALS

are very perplexing. Two principal groups are recognized—true seals (Phocidae) and otaries (Otaridae), the former without external ears, which the latter possess; there are also differences in dentition. The Phocidae are all 'hair'-seals; that is, they have no thick coating of fur under the outer hairy coat. Some of the otaries are also hair-seals, but all fur seals are otaries. There are three subfamilies of Phocidae—Phocinae, Monachinae, and Cystophorinae, the first having ten incisors, the second eight, and the third only six. The Phocinae include many of the best-known species, such as the common seal (*Phoca vitulina*), the harp-seal (*Phoca Granaulica*), the floe-rat or ringed seal (*Phoca hispida*), and the freshwater seals (*Phoca Caspica* and *Sibirica*), already referred to.

The common 'harbor' seal is circumpolar in its distribution, and extends in range downward into both the North Atlantic and Pacific oceans. It is locally common along the eastern coast of America, and on the wilder and less frequented parts of the British coast. The pelage is yellowish, variously spotted and marked, with brown above, while underneath it is generally yellowish-white; but there is considerable variability in the coloration. In size the common seal is one of the smaller species, the entire length being from three to five feet. Although gregarious, this species is not found in large 'rookeries,' but small herds are occasionally seen. The skin, which is used for leather and other purposes, and the oil, which is colorless, nearly odorless, and in many ways superior to whale oil, are of sufficient commercial importance to subject these animals to continual slaughter, and their numbers are probably steadily diminishing. The females show some attachment to their young, though their devotion has probably been exaggerated. In captivity the common seal is docile and is said to become attached to its keeper. It is endowed with much curiosity, and there may be some basis for the belief that it is strongly attracted by musical sounds. The sense of smell is very acute and the vocal power ranges from a plaintive bleat to a hoarse bark or grunt. The popular name 'sea-calf,' and the specific name *vitulina*, have reference to a supposed resemblance between its voice and that of a calf.

The harp-seal is a much larger and more northern species, reaching a length of eight or nine feet and rarely coming south of Newfoundland. It is extremely gregarious and almost wholly pelagic, resorting to the ice floes only to breed. It is much sought after by sealing vessels, several hundred thousand being annually slaughtered on the breeding grounds. The floe-rat is one of the smallest seals, although about as long as the common species. It is an Arctic form, and is of great importance to the Eskimos as a source of food and clothing. This is the species which forms a domed cavity in the ice, called by the Eskimos an 'igloo,' after the name of their own winter houses; and it also keeps open breathing holes through the ice. The seals of the Caspian Sea and Lake Baikal are near relatives to the floe-rat, which they resemble in size, though differing in some other details. Their presence in Lake Baikal, a fresh-water lake, is not so remarkable when one considers that the seal often ascends rivers for long distances and has been taken in Lake Champlain.

The Monachinae are a small group of half a

dozen species, all Antarctic, except the two species of monk-seal which are tropical. The European monk-seal (*Monachus albicinctus*) occurs in the Mediterranean Sea and adjacent parts of the Atlantic Ocean, while a closely allied species, the West Indian seal (*Monachus tropicalis*), of which little seems to be known, is confined to the Gulf of Mexico, where it is nearly extirpated. (See EXTINGUISHED ANIMALS.) These seals have the first and fifth toes of the hind feet greatly longer than the others, and the nails of both fore and hind feet are very small and rudimentary. The other seals of this subfamily are rare and little known except the sea-leopard (q.v.) of the south temperate and Antarctic seas.

The Cystophorinae are a small group containing only two or three species, but both of the genera are of considerable interest. The hooded seal (q.v.) is a large Polar species, remarkable for the hood-like distensible sac covering the head of the male and connected with the nostrils. The second genus, *Macrorhinus*, includes the largest of all seals, the elephant seals (q.v.), or sea-elephants so called in reference to the proboscis of the male as well as the great size.

Turning to the otaries, or 'eared seals,' it is convenient to recognize two principal groups, the 'sea-lions' or hair-otaries, and the 'sea bears' or fur-otaries. The former group includes the largest species, some of them attaining a length of fourteen feet. The southern sea-lion (*Otaria jubata*) occurs commonly on the west coast of South America, while the northern sea-lion (*Eumetopias Stelleri*) is found throughout the North Pacific from California to Japan. The common sea-lion of California is, however, a much smaller species, called the black sea-lion (*Zalophus Californianus*), and is often seen in menageries and zoological gardens. It is famous as the attraction at the Seal Rocks, close by the Cliff House, near San Francisco. The sea-lions are all very timid animals, easily terrified, and may be driven in herds, even far inland, by means of flags or umbrellas. See Colored Plate of SEALS.

THE FUR-SEALS. The last group of seals to be considered are the fur seals, by far the most important commercially of all marine mammals. The fur-seals of the Southern Hemisphere are now usually placed in a separate genus, *Actocephalus*, which ranges as far north in the Pacific as Guadalupe Island (29° N.), although mainly confined to the south-temperate and antarctic zones. The skin is of considerable value, and these seals have therefore been eagerly sought wherever they resorted for breeding. They have therefore been practically, if not totally, exterminated, except in some small rookeries in New Zealand and on the west coast of Cape Colony, which are under rigid governmental control, and yield about 7000 skins per annum; and especially on Lobos Island, off the mouth of the Rio Plata, which is leased by the Government of Uruguay to a private company, which so controls the slaughter that about 13,000 skins are furnished annually.

The northern fur seals (genus *Callorhinus*) are confined to the North Pacific Ocean. At the present day they breed mainly on the Pribilof, Commander, Robben, Bering, and Kurile islands, the first being the most famous resort. The northern fur-seal varies considerably in size, color, and proportions, and specialists recog-

three species. In size the male is much larger than the female, the difference being especially noticeable in the young. A full-grown male is about 80 inches long and weighs rather less than 100 pounds, while the female is only about 48 inches long and weighs less than 80 pounds. The color is considerably affected by age, the length of time the seal has been out of water, and the amount of dirt on the fur, but in general the adults are dark gray, with a more or less chestnut or seal-brown cast. The young are black above and brownish gray beneath, but when three months old have assumed the steel-gray pelage of yearlings. At this stage they are nearly white beneath and the sexes are alike. With increased age the white lower parts become grayish; the female assumes the adult aspect a little more slowly. The pelage in all the fur-traries consists of the ordinary outer coat of 'water-hair,' and a dense, soft under fur. To prepare a pelt for use as 'fur' the water-hair is removed and the under fur is cleaned. On account of their exceptional warmth, softness, and beauty, seal-skins have long been in great demand, and the wanton destruction of breeding females, literally by the millions, in the nineteenth century, so depleted the seal herds that the supply is always less than the demand. The high prices thus constantly obtainable have led to the continued existence of a considerable fleet of vessels which hunt and slaughter seals, wherever they can find them, regardless of age or sex. Ever since the discovery of the Pribilof Islands in 1786, the competition for the skins of the seals breeding there and elsewhere in the North Pacific has been so keen that the animals have been in imminent danger of extermination. The organization of the Russian-American Company in 1799, however, improved conditions somewhat, as the killing of the seals was legally restricted to the employees of a single corporation, which had the greatest interest in the maintenance of the herd. At first the slaughter was indiscriminate as to age or sex, but regulations protecting the females and young were soon made, so that when the Pribilof fur-seal herd came under the control of the United States in 1867, it was in a prosperous condition. Since then it has been sadly depleted. For a discussion of the Alaskan seal question, see SEALING.

The great evil of pelagic sealing lies in the fact that the nursing mothers wander far in search of food, while the males do not take food during the breeding season, but remain on the islands. Consequently practically all the seals taken by pelagic sealers are nursing females, the death of which ordinarily results in the starvation of the pups. There can be no doubt that pelagic sealing is suicidal, the catch showing an annual decrease since 1894, while it is probable that the profits to each vessel engaged in it are extremely small. Recent calculations based on the most trustworthy figures indicate that the Pribilof herd of breeding seals did not in 1903 exceed 60,000 females, and unless remedial measures be devised and enforced the early extinction of the herd is probable.

The terms used in reference to the fur-traries present a curious anomaly. The animal so generally called 'fur seal' is properly a sea bear, and very probably more nearly related to the bears than to the true seals. The male is called a

'bull' and the female a 'cow,' but the young one is a 'pup,' which if a male becomes a 'bachelor.' The 'cows,' moreover, are gathered in 'harems' on a 'rookery' and, to cap the climax, the capture of these mammals is commonly designated as a 'fishery'!

For full particulars, in every detail, regarding the fur-seal and the sealing industry, consult the remarkable four volumes issued by the United States Treasury Department in 1899, designated *Report of Fur Seal Investigations*.

SEA-LEOPARD. A seal (*Ogmorhinus leoponius*) of the monk-seal group, widely distributed in the southern oceans. It grows to be ten feet long and is the largest of the southern hair-seals, excepting the elephant-seal (q.v.). It takes its name from its spotted gray-and-white coat.

SEALING. An important industry, chiefly of Alaska, notable for the international complications to which it has given rise. The Alaskan seal fishery is the most valuable of its kind in the world, and was one of the chief considerations that induced the United States to purchase Alaska from Russia in 1867. It has afforded considerable revenue to the United States by the lease of the privilege of taking seals, in fact an amount in excess of the price paid for Alaska, and gives employment to large numbers of natives. From 1870 to 1890 the seal fisheries, 'carefully guarded and preserved,' yielded 100,000 skins a year. The company to which the administration of the fisheries was intrusted by a lease from the Government paid a rental of \$50,000 per annum and in addition thereto \$2,62½ per skin for the total number taken. The skins were transported to London to be dressed and prepared for the markets of the world, and the business had grown so large that the earnings of English laborers since the acquisition of Alaska by the United States had amounted by 1890 to \$12,000,000. Then came the depredations of Canadian vessels with their indiscriminate slaughter of the seals, so that the Government was compelled to reduce by 40 per cent. the number that could be taken, while the actual number taken came to be far short of the number allowed.

During the breeding season the colony of seals have a habit of crossing from their fixed habitation on the Alaskan shore to the Pribilof Islands, also the property of the United States, for the purpose of producing and rearing their young. In making this passage they cross a portion of the Bering Sea, which is considerably more than three miles outside of either shore, and therefore beyond the usual limit of jurisdiction recognized as belonging to any particular nation. Beginning in about 1886, it became the practice of certain Canadian vessels to intercept the passing seals while beyond the three-mile limit and shoot them in the water, often killing both male and female. As a result of this ruthless course it became evident that the fisheries were in a fair way to be wantonly destroyed together with the resulting industries so valuable both to the United States and Great Britain. As soon as these depredations became known to the Government of the United States, during the first administration of President Cleveland, a proposal was made to the Government of Great Britain that a convention be entered into between the two

nations, in which Russia should be invited to join, for the purpose of restricting the season during which seals could be taken and prescribing a period which covered the breeding time during which they could not be molested. Great Britain and Russia promised their concurrence, but an unexpected obstacle occurred in the opposition of the Canadian Government, whose subjects were profiting by the depredation. The Canadian objections could not be overcome, and the scheme had to be abandoned. The Government of the United States was therefore compelled to assert its authority over the business of sealing or suffer the destruction of the seal herd. In August, 1886, three British vessels were seized in the Bering Sea by a United States cruiser for taking seals in a part of the sea from 45 to 115 miles from land. The British Government protested and the captures were restored. A prolonged diplomatic controversy with Great Britain now ensued, in the course of which the United States took the ground that the waters in which the seizures were made did not constitute a part of the open sea, but were within the jurisdiction of the United States. An attempt was made to show that Russia had treated the Bering Sea as *mare clausum* first to the fifty-fifth degree of north latitude and later to the fifty-first degree, and that whatever rights she possessed in this respect passed to the United States by the cession of Alaska and the Aleutian Islands in 1867. The question was at once raised whether the cession included all the waters east of the meridian mentioned as the boundary between the United States and Russia, or whether it referred only to the lands and islands within those limits together with the ordinary territorial waters. Secretary Boutwell, in 1872, took the view that the jurisdiction of the United States did not extend beyond the ordinary three-mile limit. In 1886 this opinion was reversed by Secretary Manning, who announced that jurisdiction would be asserted over the entire Bering Sea east of the meridian mentioned. In 1889 Mr. Blaine became Secretary of State, and entered upon a long diplomatic controversy with the British Ambassador, Sir Julian Pauncefote, in regard to the matter. Other grounds than *mare clausum* were now put forth in defense of the position of the United States. The stand was taken that the Canadian practice was *contra bonos mores*, a practice which involved a serious and permanent injury to the rights of the Government and people of the United States. It was further asserted that the United States had a right of property in the seals by reason of its ownership of the coast on which they live and of the islands to which they regularly resort for the purpose of producing and rearing their young; that this property interest was claimed and exercised by Russia until ceded to the United States, and that Great Britain had impliedly recognized it by abstaining from all interference therein until about the year 1886. In view of this right the United States asserted the claim to protect on the high seas such property from wanton destruction by individuals, and that it was, in a sense, the trustee thereof for the benefit of mankind.

In view of the pending negotiations for the settlement of the dispute by arbitration, a *modus vivendi* was agreed to on June 15, 1891. By this the depredations were ordered to be discontinued for a period of one year. Finally an

arbitration treaty was concluded February 29, 1892, providing for a reference of the questions in dispute to a commission of seven persons, two appointed by the President of the United States, two appointed by the Queen of England, one by the King of Sweden, one by the President of the French Republic, and one by the King of Italy. The arbitrators met in Paris in the spring of 1893. The United States was represented by able counsel, including Hon. E. J. Phelps, Hon. James C. Carter, and Mr. Frederick B. Condit. When the evidence was before the tribunal it was plain that the United States had a very weak case with regard to the claim of exclusive jurisdiction in the Bering Sea, and it was not strongly pressed by the counsel of the United States. The real question, therefore, and the one upon which the chief argument was directed, was the claim of the United States to the right of property in the seals and the right of protecting them beyond the three-mile limit. The tribunal decided that Russia never asserted or exercised any exclusive jurisdiction over the Bering Sea beyond the three-mile limit; that Great Britain did not recognize any such claim; and that the United States had no right to the protection of or property in the seals frequenting the islands of the United States in the Bering Sea when found outside the three-mile limit. On the latter point, the American commissioners, Justice Harlan and Senator Morgan, dissented. The tribunal, however, prescribed a series of regulations for preserving the seal herds which were to be binding upon and enforced by both nations. They limit pelagic sealing as to time, place, and manner by fixing a zone of sixty miles around the Pribilof Islands within which the seals are not to be molested at any time, and from May 1st to July 31st each year they are not to be pursued anywhere in Bering Sea. Only licensed sailing vessels are permitted to engage in fur sealing, and the use of firearms or explosives is interdicted. The regulations are to remain in force until abolished by mutual agreement, but are to be examined every five years with a view to modification. Consult: Snow, *Topics in American Diplomacy* (Boston, 1891); Phelps, in *Harper's Monthly Magazine*, April, 1891.

SEALING-WAX. A composition of hard resinous materials used for receiving and retaining the impressions of seals. Since the introduction of gummed envelopes its manufacture has been of much less importance than formerly. Common beeswax was first used as a sealing wax, being mixed with earthy materials to give it consistency. Nevertheless, it was difficult to preserve it, as a very small amount of heat softened it. The Venetians, however, brought the Indian sealing-wax to Europe, and the Spaniards received it from the Venetians, and made it a very important branch of their commerce. The great value of the Indian wax consisted in the fact that it was made only of shellac, colored with vermilion or some other pigment, and this has been found superior to all other materials. In addition to the shellac and coloring material, there is added to the wax a portion of Venice turpentine. See LAC.

SEAL ISLANDS. A group of islands off the coast of Peru. See **LOBOS ISLANDS**.

SEAL KOTE. A city of the Punjab, India. See **SIALKOT**.

SEAL OF SOLOMON. Order of the Ancestral Throne, with two classes, founded by the Emperor Meiji (1871). The decoration is a six-pointed star, encircled by two engaged triangles, and surmounted by a bearded cross and surmounted by the crown of the Emperor.

SEALS'FIELD, CHARLES. The name assumed by KARL POSTL (1793-1864), an Austrian novelist and traveler in the United States, Mexico, and Central America, in early life secretary of a religious Order in Prague, and ordained priest. He died in 1822 in the United States, where he traveled extensively, mainly in the Southwest. For a short time (1829-30) he was editorially connected with the *Courier des Etats-Unis*. He afterwards resided mainly in Switzerland. In 1828 he published *Tokah, or The Wild Rose*, and later some remarkable descriptive novels: *Der Leptine und die Republikaner* (1833, a rewriting of *Tokah*); *Der Virey und die Aristokraten* (1834, rewritten as *Morton*, 1846); *Das Kajutobuch* (1840); and the social studies *Lebensbilder aus beiden Hemisphären* (1835-37), *Deutsch-amerikanische Wahlverwandtschaften* (1835-37), and *Suden und Norden* (1842-43).

SEAMAN. In law, any man serving on board a seagoing ship below the rank of officer.

SEAMANSHIP. The science and art of rigging, equipping, manœuvring, and handling a ship or boat under all conditions. The advent of steam as the motive power has changed the character of seamanship to a large extent, but it has not lessened its importance. A moderate but accurate knowledge of steam engineering is necessary for officers as well as thorough information in regard to modern marine meteorology and navigation. Consult: Knight, *Modern Seamanship* (New York, 1902); Luce, *Seamanship* (revised edition, New York, 1898); Todd and Whall, *Practical Seamanship for Use in the Merchant Service* (London, 1896). See NAVIGATION; SAILING; SIAM NAVIGATION, etc.

SEAMEN, LAWS RELATING TO. In its broadest sense a 'seaman' is a person engaged in navigation; but with respect to the laws affecting seamen the term is generally used in the sense which it is given in the construction of the British statutes regulating merchant shipping, as "any person (except masters, pilots, and apprentices, duly indentured and registered) employed or engaged in any capacity on board any ship."

Laws for the protection of seamen and sailors have been passed in all maritime countries, and the subject is very fully covered in the statutes of modern civilized nations. Details of the regulations of the English and American statutes differ from each other and from those of the non-English nations, but the general scope and purpose of such laws is the same in all European and American nations. In Great Britain most of the acts governing the subject of merchant seamen were consolidated into the Merchant Shipping Act of 1854 (17 and 18 Vict., ch. 104), and most of the previous acts, beginning with that of Elizabeth, ch. 13, were repealed in the same year. This act, with numerous amendatory statutes, governed the subject until 1894, in which year the acts affecting the subject were again consolidated in the Merchant Shipping Act of 1894. This last

act did not materially modify the laws existing under the previous act, but was chiefly important for bringing the laws together in convenient form, and for its greater stringency affecting the provisions insuring the crew against overloading, undermanning, the carrying of dangerous cargoes, the inadequacy of life-saving appliances, and, in general, any deficiency or defect which might make the ship unseaworthy. There are various acts in the British colonies upon the same subject, some of which follow the Imperial statute, but most of them differ in various details. In Great Britain the Merchant Shipping Act of 1894 vests the general control of shipping interests in the hands of the Board of Trade, and provides for the appointment of officers, called superintendents and deputy superintendents, whose general business is to afford facilities for engaging seamen by keeping registries of their names and character, to superintend and facilitate their engaging and discharging, to provide means of securing the presence on board at the proper times of men who are so engaged, and in general to carry out the regulations of the statutes concerning the dealings of the seamen with their employers. The Board of Trade has power to detain any vessel regarded as unseaworthy, subject to an appeal to a court of survey, and is authorized to prescribe a load water-line (usually called 'Plimsoll's mark'), and to provide for the proper indication by marks upon the side of the ship of the levels of the various decks, etc.

In the United States the subject is governed by the provisions of Revised Statutes, sections 4554 to 4591, and the various amendments and additions made subsequent to them.

The terms master, seaman, and owner, in the United States statutes, are defined, for the purpose of the acts, as follows: "Every person having command of any vessel belonging to any citizen of the United States shall be deemed to be the master thereof; and every person (apprentices excepted) who shall be employed or engaged to serve in any capacity on board the same shall be deemed and taken to be a 'seaman,' and the term vessel shall be understood to comprehend every description of vessel navigating any sea or channel or lake or river to which the provision of this title may be applicable; and the term 'owner' shall be taken and understood to comprehend all the several persons, if more than one, to whom the vessel shall belong."

When in foreign countries the seamen may generally look to the consul of the country under whose flag they sail to enforce their rights against the master or owner of the vessel on which they are employed; and the rights of the master and owners are likewise enforced.

No detailed statement of the rights and duties of seamen can be given here. The laws of the United States, which may be taken as showing the spirit of the British laws, in general provide that the seaman must be under written contract duly executed; must present himself on board under severe penalties, and for unauthorized absence from the vessel forfeits three days' wages for an absence of less than forty-eight hours, and all back wages and property on the vessel when longer than forty-eight hours. He may be imprisoned for desertion, but he may not be flogged, as formerly, nor can forfeiture of

wages be added to any other form of corporal punishment. A seaman is entitled to medical attendance and aid without deduction from his wages, and if he dies on a voyage his heirs receive his full wages for the entire voyage.

The rights of seamen are within the jurisdiction of the admiralty courts when they are engaged in trade or commerce on tide water or on the high seas; but for the purpose of this jurisdiction persons who do not contribute to the aid of the navigation of the vessel, or to its preservation in the course of their occupation, are not to be considered seamen; and, on the contrary, any person whose regular occupation would not impose these duties upon him may get the rights of a seaman by temporarily assuming the duties of one. See ADMIRALTY LAW; MARITIME LAW; and consult the authorities there referred to, and the statutes of the various nations.

SEA-MOUSE. A sea-worm (see ANNELIDA) of the genus *Aphrodite*. It is broad, short, somewhat flattened, and so densely covered with long fine setae, or bristles, as to resemble a mouse. It grows to the length of about two inches, and is not uncommon in the North Atlantic at a depth of from five to twenty fathoms.

SEA-OTTER. A marine otter (*Enhydris* or *Lutra Marina*) of the North Pacific shores and islands. It yields the most valuable of furs. It is about three feet long from nose to root of tail, and the tail is about 10 inches long. Its form is robust, the head massive, the color dark liver brown, paler on the head, and the tail is terete and obtuse. The hind feet are very broad, forming swimming organs like a seal's flippers, but with furry soles; the fore paws are small and cat-like, and their palms are naked. The dentition resembles that of the otters (*Lutra*), but a pair of incisors in each jaw is lacking, and the molars have lost the sharp points seen in other Mustelidae, in accordance with its peculiar diet. When Alaska was first visited by Russian traders they found this animal numerous on all the coasts of Alaska and of the Aleutian chain and other islands of Bering Sea, and as far south as Puget Sound, and secured thousands of their valuable pelts; but the on-slaught made upon the race by Russian and Hudson Bay fur traders and the Indians reduced it so rapidly that the otter soon became rare except upon the most remote and difficult islands, where it would long ago have become extinct had not rude measures been taken for its preservation. In spite of all attempts at protection, however, fewer skins are obtained annually, and the price of the fur has correspondingly increased, until now a fine skin is worth in Liverpool \$500, and even \$1500 has been paid for special examples. One reason for the modern scarcity of the fur is the fact that the animal has changed its habits somewhat under the influence of man's persecution, and now spends much more of its time in the sea, and seeks its food more constantly in deep water than formerly. Its food consists mainly of crabs and sea-urchins with some fish. It has been most extensively studied and described by H. W. Elliott, whose many observations and statistics are summarized by Coes in his monograph *Fur-Bearing Animals* (Washington), where references to many other authorities will be found. See Plate of FUR-BEARING ANIMALS.

SEA-PEN. An alcyonarian (q.v.) coral of the family Pennatulidae, in which the colony is bare of polyps at its base, while the lateral branches nearer the tip bear them in large numbers. These branches are arranged in series on opposite sides of the central shaft so that the entire colony looks something like a rather stiff feather or quill pen. Sea pens occur in water of moderate depth, on sandy or muddy bottoms, where they are only lightly attached by the bare end of the shaft. They ordinarily reach a length of several inches, but an Arctic species of deep water (*Umbellularia triadactyla*) may be four feet long. Some of them are richly colored, and some are highly phosphorescent.

SEA-PERCH. See BASS; SEA BASS.

SEA-RAVEN, or DEEP-WATER SCULPIN. A large, reddish-brown, much variegated sculpin (*Hemirhamphus Americanus*) of the coast of New England and Canada, which has a great number of spiny cirri, and dangling fleshy appendages, a spongy dorsal fin of great length, and generally extraordinary aspect. See illustration under SCULPIN.

SEARCH (from OE. *sercher*, *sercher*, Fr. *chercher*, to search, from Lat. *circare*, to go around, traverse, from *circus*, ring, *circus*, Gk. *κῆκος*, *kurkos*, *κῆκος*, *krikos*, circle). RIGHT OF. As a part of the law of nations, the right of a belligerent to stop neutral merchant vessels on the high seas for the purpose of ascertaining their nationality and destination, and the character and ownership of their cargoes, with a view to determining their liability to capture. This right follows as a necessary incident of the belligerent right of capturing an enemy's property at sea, of seizing contraband of war, and of blockading an enemy's coast, since liability to capture cannot be determined until a search has been made. But the right of search in such cases is restricted to merchant vessels only, and has no application to the public armed vessel of a neutral or the merchant vessel of a belligerent. This somewhat extraordinary usage is strictly a belligerent right, comes into existence at the outbreak of war and ends with the conclusion of hostilities. All neutral vessels of whatever character are liable to search by a properly documented armed vessel of either belligerent and are subject to seizure and condemnation upon refusal to submit, although they may have been engaged in innocent traffic. But the belligerent whose vessel makes the search may be held responsible to the neutral concerned if the search is not conducted in a manner warranted by the law of nations. Thus any injury done to the cargo or any oppressive or insulting conduct during the search would be sufficient ground for complaint. Unless regulated by treaty the manner in which the search is to be conducted is determined by the usage of nations. This matter is now frequently the subject of treaty regulation, and where so regulated the distance at which the searching vessel shall remain from the vessel to be visited, the number of persons permitted to take part in the search, and the amount of evidence necessary to satisfy the belligerent of the innocent character of the vessel are all specified. The notification of intent to visit a neutral vessel is usually given by firing an unshotted gun, which should be followed by

the vessel's neutral flag and a heaving to, the vessel's search in earnest is justified in respect to her crew in compel obedience. The distance at which the searching vessel shall remain when the search party is on board is usually stated to be "not within the range of a cannon shot." The search party is limited to an officer, a boat's crew, and one or two persons to assist in the work of conducting the search. If the vessel's documents indicate neutral origin and destination it is allowed to proceed; if they are fraudulent or indicate hostile destination search is made for contraband articles, and if any be found the ship is declared a good prize and sent into port for condemnation.

To prevent the annoyances incident to the right of search, governments have sometimes arranged with one another that the presence of a public armed vessel with a fleet of neutral merchant vessels shall be regarded as sufficient evidence that they are engaged in a lawful trade. Many neutrals, among them the United States, have even claimed this as a right of international law without the necessity of sanction by treaty, but others, like England, deny the right. In addition to the belligerent right of search, a similar usage with respect to foreign vessels is permissible in the following cases: to search vessels within the territorial waters of a State as a means of executing revenue laws; to search vessels on the high seas on suspicion of piracy; to search merchant vessels on the high seas for the purpose of ascertaining their nationality. In general, European nations have conceded the reciprocal right of detention and visitation of their vessels suspected of being engaged in the slave trade.

Prior to the War of 1812 the British Government took advantage of the right of search to exercise what it regarded as its right of impressment (q.v.). For many years in connection with the suppression of the slave trade Great Britain endeavored to obtain the consent of the other maritime powers to a qualified right of search in time of peace. Before the year 1820 the British Government had succeeded in making treaties to this effect with Denmark, Spain, Portugal, and the Netherlands. Similar concessions concerning the right of search in time of peace were obtained by Great Britain from France in 1831-33, from Denmark and Sardinia in 1834, from the Hanse Towns and Tuscany in 1837, from Naples in 1838, and from Haiti in 1839. In 1841 a treaty conceding mutually a qualified right of search for the purpose of suppressing the slave trade was negotiated between Great Britain, Austria, Russia, Prussia, and France, but France, largely influenced by Lewis Cass, then United States Minister at Paris, refused to ratify this quintuple treaty. Throughout this period the British Government made repeated but uniformly unsuccessful efforts to obtain a recognition of the right of search from the United States Government, and in the progress of the negotiations endeavored to distinguish between the right of search and the right of visit, though the United States never assented to the distinction. On April 7, 1862, during the Civil War, Secretary of State Seward, evidently desiring to conciliate the British Government, signed a treaty for the suppression of the slave trade which provided, among other things, that the United States and Great Britain should have a mutual right of search. The right, how-

ever, was seldom exercised, since at this time the slave trade had become virtually extinct. A good account of the negotiations may be found in Schuyler, *American Diplomacy* (New York, 1886).

SEARCH LIGHT. The electric search light consists of an electric arc mounted in the focus of a parabolic mirror. The mirror receives the rays which diverge from the lamp and by virtue of the properties of a parabola reflects them in a direction parallel to the axis. The search-light casing consists of a thin metal cylinder, blackened inside to prevent interference of light by reflection, from 18 to 72 inches in diameter and of slightly greater length. It is supported on trunnions or pivots to give it motion in the vertical plane, and the arms carrying the pivots are secured to a pivoted horizontal plate which permits lateral movement. The feeding in the lamp is generally automatic, though hand feed is also provided. The light may be trained by hand or by a search-light controller located at a distance from the light. If reliable in its operation the controller is to be preferred, as it is difficult for the operator to see objects illuminated by the rays when he is too near the light. The earliest practicable search lights were designed by a Frenchman, M. Mangin. In the earliest models the carbons of the lamps were nearly vertical, but in more recent types they are horizontal, as this arrangement permits the crater formed in the carbon to give its full brilliance to reflection and prevents irregular feeding from displacing the incandescent arc from the optical axis of the mirror. See COAST DEFENSE.

SEARCH OF TITLE. In law, a search in the various public offices where instruments which may affect the title to real estate are recorded, in order to determine whether a person has a good record title to real property. If there have been any proceedings involving the transfer or division of the property, such as a partition, the searcher must look up the records of the proceedings and determine whether they were regular, and whether they included all necessary parties, etc. The memorandum of the results of the search is called an 'abstract of title.' A search for conveyances and mortgages is always made for twenty years back, as that is the period required to gain title by adverse possession, and many persons require a complete chain of title from the original grant by the Government to the date of the conveyance. An attorney who searches a title for a client is responsible to the client for any damages which may result from a defective title, if the defect was a matter of record and the attorney failed to find and report it.

See ABSTRACT OF TITLE; RECORDING OF DEEDS; RECORDS, PUBLIC, etc.; and consult the authorities referred to under ABSTRACT OF TITLE and REAL PROPERTY.

SEARCH WARRANT. A warrant or mandate of a court of competent jurisdiction, usually a magistrate's court, addressed usually to the sheriff or a constable, requiring him to search a house or place named in the warrant for property alleged to have been stolen. The warrant requires the officer serving it to seize the property if found and the person named in the warrant and to bring both before the court issuing the

writ. By a gradual relaxation of practice, the use of the search warrant was early adopted by the common-law courts, and by modern statutes its use has been extended to the search for and seizure of intoxicating liquors, gambling implements, counterfeiters' tools, burglars' tools, smuggled goods, obscene literature, and generally all articles the bare possession of which is made a crime. The use of the search warrant was before the nineteenth century subject to many grave abuses, not only because of its use as a means of securing evidence of political offense, but as a means of securing evidence of crimes chiefly important because of their semi-political character, as in the case of the use of writs of assistance (which were really forms of search warrants) in the American colonies before the outbreak of the Revolution. The final overthrow of these abuses was brought about in the reign of George III., and it is now established that by the common law a search warrant can be issued only on oath or affirmation showing probable cause. It is required to specify definitely the place in which the search is to be made and the property to be seized. If the officer executing the warrant does not comply with its terms, he is civilly liable for all his acts not authorized by it and may be compelled to respond in damages for trespass or assault or both, but if strictly obeying the warrant the officer may break outer or inner doors after demand is made for admittance, and his act is justified by his writ whether he succeeds or not in finding that for which he makes search. The United States Constitution (Fourth Amendment) contains a provision prohibiting the oppressive use of the search warrant; and this provision has been enacted in substantially the same form in all of the State constitutions. This amendment does not operate as a prohibition upon the governments of the several States, but the corresponding provisions of State constitutions have received a similar interpretation. See PROCEDURE; CONSTITUTIONAL LAW; CRIMINAL LAW; and consult the authorities there referred to.

SEA-ROBIN. A fish of the genus *Prionotus*, of the gurnard family (*Triglidae*), remarkable for their big-headed, ugly form, and scaleless, mottled body, with a great number of appendages, and many 'rags' about the fins. These ugly shore fishes represent in a dozen species on the American coasts the gurnards of the Old World, and have similar habits. They are scavengers, and greatly detested by the fishermen, whose hooks they rob of bait, and to whom they are worthless.

SEARS, BARNAS (1802-80). An American educator and theologian, born at Sandisfield, Mass. He graduated at Brown University in 1825, studied at the Newton Theological Seminary, and in 1831 became a professor at Madison University. In 1833 he went to Germany, and after pursuing studies at Halle, Leipzig, and Berlin, accepted the professorship of theology at the Newton Seminary, of which he became president. In 1848 he was made secretary and executive agent of the Massachusetts Board of Education. From 1855 to 1867 he was president of Brown University. Afterwards he acted as general agent of the Peabody Education Fund for the Southern States. He edited *The Christian Review*, contributed to the *Bibliotheca Sacra*,

wrote a *Life of Luther* (1850), and many pedagogical and educational treatises.

SEARS, ISAAC (1729-86). An American patriot, one of the leaders of the Sons of Liberty (q.v.) in New York. He was born in Barwich, Mass., but removed to New York City. He commanded a privateer, and in 1758-61 cruised against the French, but lost his vessel by shipwreck. He then engaged in the European and West Indian trade. In the early disputes between the colonists and the British Government he allied himself with the more radical element of the Patriot Party in New York, and during the opposition to the Stamp Act (q.v.), as well as afterwards, was one of the leaders of the Sons of Liberty. He was a member of the Committee of Fifty One in New York in 1774, and of the Committee of One Hundred in 1775; led a company of Connecticut light horse into New York City later in 1775, and destroyed the press of Livingston's *Loyalist New York Gazetteer* (see RIVINGTON, JAMES); was appointed deputy adjutant-general with the rank of lieutenant colonel by Gen. Charles Lee in 1776, and was a member of the State Assembly in 1783. He was commonly known as 'King Sears.'

SEARS, LORENZO (1838—). An American educator, born at Searsville, Mass. He graduated at Yale in 1861, and at the General Theological Seminary, New York, in 1864. He was rector of various parishes in New England until 1885, when he became professor of rhetoric and English literature at the University of Vermont. In 1890 he accepted a similar position at Brown University. His writings include: *The History of Oratory* (1896); *Principles and Methods of Literary Criticism* (1898); *A Historical Introduction to the Library of Modern Eloquence* (1901); and *American Literature in Its Colonial and National Periods* (1902).

SEA-SERPENT. An imaginary marine creature supposed to be of snake-like form and nature, and of huge size and pelagic habits. Many so-called 'sea serpents' have been shown to be floating gigantic seaweeds, or strings of porpoises following one another in Indian file. The ribbon-fish (*Regalecus*) is perhaps responsible for some; giant squids or chains of ascidians may explain others. The supposition that some of the marine saurians of past ages may survive in the depths of the sea, and occasionally appear at the surface, is not scientifically credible. A discussion of this subject in its various bearings, with illustrations of things seen by mariners, may be found in Wilson, *Leisure Time Studies* (London, 1878); and in Oudemans, *The Great Sea Serpent: An Historical and Critical Treatise* (London, 1892).

SEASHORE. The space of land adjoining the sea and covered at high tide and bare at low tide. By the English common law the seashore belongs to the Crown, subject to the public rights of fishing on it, and sailing over it. In the United States the seashore belongs to the States in whose dominion it lies, and a State may make such reasonable regulations as to its use by the public as are not inconsistent with Federal laws. However, the public have the right of fishing on the seashore, and gathering various forms of shell fish thereon, and this right cannot be interfered with by private owners. Consult: Angell, *Treatise of the Right of Property in Tides*

SEA-SICKNESS. *Thrombosis* (2) **SEA-SICKNESS.** A reflex nervous affection characterized by nausea, vomiting, and extreme depression, occurring in susceptible individuals during the motion of a ship at sea. Premonitory symptoms are vertigo, headache, and distress and pain at the pit of the stomach appear almost immediately after a susceptible person is exposed to the motion of rolling water in a vessel. Vomiting has a convulsive character soon comes on, with a sense of overwhelming prostration as to render the patient utterly regardless of what is going on about him, and almost indifferent to life. A coldly pallor, a profuse cold sweat, and diarrhoea are commonly present. Susceptibility to seasickness varies greatly in different persons, and the same individual may exhibit varying degrees of susceptibility at different times. Children and aged persons possess comparative immunity from sea-sickness, and women as a rule suffer more than men. It is believed that persons with a strong heart and a slow pulse are less liable to the affection than irritable individuals, having a rapid pulse and a tendency to palpitation.

The primary cause of sea-sickness is the motion of the vessel, and the pitching, or alternate rising of the bow and stern, is specially apt to induce it. In some persons other regular oscillatory movements bring on a very similar condition; the motion of a swing, a railway train, or even a carriage is enough to provoke nausea and vomiting in these individuals. The exact manner in which such causes produce seasickness is not definitely settled. It is now generally believed to be by a reflex disturbance of the nervous system due to the violent and unusual stimulation of the organs of special sensation concerned in maintaining the equilibrium of the body, particularly the semicircular canals of the ear, the eyes, and also of the abdominal viscera, especially the stomach. Very probably no one cause is operative in any case. Some cases seem to be primarily of gastric origin, while others are purely psychical or nervous. It has been suggested that the attack is due to a congestion or hyperæmia of the nervous centres in the spinal cord, which are related to the stomach, and the muscles concerned in vomiting.

The remedies which have been suggested and used for sea-sickness are innumerable. Most persons are benefited by a preliminary course of calomel and a light diet for several days before sailing. Small doses of strychnine may be taken for a few hours before embarking. A laxative pill at night for the first two or three days of the voyage is also beneficial, together with a simple diet and avoidance of fluids. If in spite of precautions the attack comes on, the patient should at once go to bed, and stay there for a day or two or until the attack subsides. A belladonna plaster over the nape of the neck, and one of mustard, spice, or capsicum over the epigastrium, will sometimes keep all symptoms in abeyance. The surface temperature may be kept up with hot-water bottles if necessary. Vomiting may be combated by taking pieces of ice, cold champagne, ginger ale, or a few drops of brandy; these are better than the hot broths or tea so usually given. Cocaine in small doses by the mouth is a valuable agent to control severe vomiting. Headache and nausea are often amenable to the use of either of similar preparations.

Chloral, the bromides, antipyrine, nitroglycerin, and amyl nitrite are also useful in certain cases. If the onset of the sickness is not sudden and severe, a determined effort to breathe regularly and not in rhythm with the motion of the ship will often overcome the spasmodic muscular contractions and the tendency to vomit. Compression of the abdomen by a broad tight belt will sometimes give relief. Lastly, the patient should not remain too long below deck. All unpleasant symptoms will sometimes quickly vanish on a return to the fresh air and sunshine. See VOMITING.

SEASIDE GRAPE (*Coccoloba urifera*). A small West Indian tree of the natural order Polygonaceæ, which grows on the sea-coasts. It attains a height of 20 feet or more; has leathery, shining entire leaves, and a pleasant, subacid, edible fruit, half an inch in diameter, somewhat resembling a currant, formed of the pulpy calyx investing a bony nut. The wood is heavy, hard, durable, and beautifully veined, and when boiled yields an astringent red coloring matter, sometimes called Jamaica kino.

SEASIDE SPARROW. One of several small conspicuously streaked marsh-sparrows constituting the genus *Ammodramus*, and found numerously in four species in the Eastern United States, specifically *Ammodramus maritimus*. The sharp-tailed and Henslow's sparrows are others.

SEA-SLUG. A shell-less creeping mollusk of the nudibranchiate group. (See NUDIBRANCHIATA and accompanying Colored Plate.) The term is also sometimes applied to holothurians (q.v.).

SEA-SNAIL. A fish of the family Liparidæ, consisting of small sluggish, goby-like fishes of Arctic and Antarctic seas, which creep about the rocks at various depths, adhering to them by

SEA-SNAIL.
a, A North Atlantic sea-snail (*Liparis liparis*); b, its sucking disk.

a ventral sucking disk (see illustration), formed of the modified ventral fins. They feed upon both vegetable and animal substances.

SEA-SNAKE. One of the poisonous marine snakes of the elapine subfamily Hydrophiidæ. They are from two to four feet long, and have the tail, and sometimes the entire body, compressed vertically in adaptation to their swimming life. They are absolutely aquatic, and die when kept long out of the water, though they go ashore to bear their young, which are born alive, and are guarded by the mother for a period. They cast their skins piecemeal. These serpents are found in about 50 species of several genera, from the Persian Gulf to the Philippines (casually to Japan), and also on the coast of Central America. They abound, sometimes in

schools, in the estuaries and tidal waters, and are often met with far from land; while one species (*Distira Stupeii*) is confined to the land-locked Lake Taal, in Luzon. One of the well-known species of the Bay of Bengal is the 'keriril' (*Distira Jordani*). These serpents feed upon fish, and are extremely poisonous, and very dangerous to fishermen, pearl divers, and bathers in certain regions. Most of them are dull brownish or greenish in color, but others are brilliantly colored, as in the case of the Indian species (*Hydrophis nigricincta*) figured on the Colored Plate of FOREIGN VENOMOUS SERPENTS. Consult: FAYRER, *Thanatophidia of India* (London, 1874); BOUTLENGER, in *Natural Science*, vol. 1. (ib., 1892).

SEASONS (OF, *season, seison, saison*, Fr. *saison*, from Lat. *satio*, a sowing, from *seco*, to sow; connected with Ochurch Slav, *seti*, Lith. *segir*, Goth. *saiun*, OHG. *säen*, *säun*, AS. *säwan*, Eng. *sow*). Divisions of the year based upon climatic conditions. The changes of the seasons are due to two causes: (1) the inclination of the earth's rotative axis to the plane of the ecliptic (q.v.); (2) the varying length of the day as compared with the night, resulting from the inclination of the axis. As a result of the first of these causes, the sun's rays fall more obliquely on the earth in the winter than in the summer. The number of rays striking a surface varies as the sine of the angle of inclination. Thus the greater the obliquity the less the number of rays. In the summer the sun rises to a greater elevation each day than at other seasons, and therefore the number of rays falling on the earth's surface in that season will be greater than in the winter. The second cause is obvious. Since the heat of the earth is due primarily to solarization, it follows that the hot season should occur when the days are longest. Within the tropics the difference in the obliquity of the sun's rays is never so great as to make one part of the year very sensibly colder than another. There are, therefore, either no marked seasons, or they have other causes altogether, and are distinguished as the *wet* and *dry* seasons. (See RAIN.) But in the temperate zones the year is naturally divided into four seasons: *spring*, *summer*, *autumn*, and *winter*. In the Arctic and Antarctic regions spring and autumn are very brief, and the natural division of the year is simply into summer and winter, and this is very much the case also in regions of the temperate zones lying near the Arctic and Antarctic circles. In subtropical regions the distinction of four seasons is in like manner very imperfectly marked. This distinction is everywhere somewhat arbitrary as to the periods of the year included in each season, which really vary according to latitude, and partly according to the other causes which influence climate (q.v.), the seasons passing one into another more or less gradually, and their commencement and close not being determined by precise astronomical or other phenomena. The greatest heat of summer is never reached till a considerable time after the summer solstice (q.v.), when the sun's rays are most nearly vertical, and the day is longest; the greatest cold of winter is in like manner after the winter solstice, when the day is shortest, and the sun's rays are most oblique. The reason in the former case is that as summer advances the earth itself becomes more heated by the continued action of the sun's rays, and in the latter, that it retains a portion of the

heat which it has imbibed during summer, just as the warmest part of the day is somewhat after midday, and the coldest part of the night is toward morning.

SEASONS, THU. A descriptive poem in blank verse by James Thomson. *Water* appeared in 1726, *Summer* 1727, *Spring* 1728, and *Autumn* 1730, and a revised and enlarged edition in 1744. It marks a reaction against the artificial poetry of that day, and led up to the nobler nature-poetry of the succeeding period.

SEA-SQUIRT. Any of several marine animals which have the power of ejecting water when removed from their native element. In the West Indies the large holothurians (q.v.) which eject water from the respiratory trees through the anal opening are often so called. The name is more commonly and rather more properly applied to the larger ascidians (q.v.), which force the water out of the atrial cavity through the atrial pore by the contraction of the tunic, often with considerable velocity, and for many inches.

SEA-SWALLOW. A small gull or tern (q.v.).

SEA/TON, WILLIAM WINSTON (1785-1866). An American journalist, born in King William County, Va. From 1812 until 1860 he was, with his brother-in-law, Joseph Gales, proprietor of the *National Intelligencer* at Washington, D. C. From 1812 until 1820 the two were the only reporters of Congressional proceedings. Their *Annals of Congress, Debates and Proceedings in the Congress of the United States from 3 March, 1798, till 27 May, 1827* (42 vols., 1834-56), and their *Register of Debates in Congress from 1827 till 1837* (29 vols., 1827-37) are sources of the utmost importance on the history of the times.

SEA-TROUT. One of various fishes, as (1) the weakfish (q.v.), and (2) in Great Britain the trout (*Salmo trutta*).

SEATTLE, se-ät'tl. The largest city of Washington and the county-seat of King County, situated on the eastern shore of Puget Sound, 864 miles by water north of San Francisco, Cal., and 185 miles by rail north of Portland, Oregon (Map; Washington, C 2). It is a terminal point of the Canadian Pacific, the Northern Pacific, and the Great Northern railroads, the first named using the tracks of the Northern Pacific for its entry into the city. Transportation facilities by water, too, are excellent. Besides several coast-wise steamship lines to San Francisco, the principal ports of Alaska, etc., there are regular lines to Japan, China, Siberia, the Philippines, and Honolulu. Communication is maintained also, but more irregularly, with ports of South America, Europe, Africa, and Australia.

Seattle is magnificently situated midway between the Cascade and Coast ranges, with Puget Sound in front and Lake Washington at its rear. Green and Union lakes are within the municipal limits, and the Duwamish River flows through the city. The business quarter occupies the lower level, near the river and sea. Planks, gravel, macadam, asphalt, wooden blocks, and vitrified brick constitute the paving materials of the more important thoroughfares.

Denny and Kimear, Lincoln, Volunteer, Woodland, and Washington are the chief parks, together with the beautiful and extensive grounds

the State University and of Fort Lawton. The annual appropriation for the maintenance of the city is about \$10,000. Edifices of importance are the city hall, county court house, the high school, Providence Hospital, and the seven buildings of the University of Washington (qv.). The Federal Government has purchased for \$150,000 land on which to erect a \$750,000 building for its various departments. A public library building (\$200,000), the gift of Andrew Carnegie, is in course of construction (1903), the site having been acquired by the city at a cost of \$100,000. The Public Library contains some 40,000 volumes.

Commercially and industrially, Seattle is one of the foremost cities of the Pacific Coast. It has valuable fisheries and a tributary region rich in timber and in mineral and agricultural resources. The opening of the Alaskan gold fields, for which the city is a popular sailing point, and the development of trade with the Orient, especially with the Philippines since the Spanish-American War, have contributed to the remarkable growth of the city in recent years. The waterway connecting Puget Sound with Lakes Union and Washington, which is now under construction by the Federal Government, will add much to its shipping advantages. The project contemplates the creation of a canal, nearly eight miles long and of sufficient depth for the largest merchant and war vessels, leading to the fine fresh-water harbor afforded by Lake Washington. The value of Seattle's trade by sea in 1901 was \$45,596,067, including goods to the amount of \$6,958,613 carried to Japan by a single line. In that year shipments by water included some 25,000,000 feet of lumber, 470,000 tons of coal, 88,000 bales of cotton, 1,214,000 bushels of wheat, and 175,000 barrels of flour. Large quantities of beer, meats, fruit, hay, oats, and manufactured goods are also exported. Seattle is one of the chief ports of the country for the receipt and shipment of gold and silver. The Federal Government in 1898 established an assay office here. Lumber and shingles constitute the principal shipments by rail to Eastern markets.

Manufacturing interests, too, are of importance. In the census year 1900, \$10,132,000 capital was invested in the various industries, which had a production valued at \$26,373,000. The manufacture of lumber, slaughtering and meat-packing, flour-milling, fish canning and preserving, the manufacture of foundry and machine shop products and bridge work, ship and boat building, the roasting and grinding of coffee and spices, bottling, and the manufacture of confectionery, dairy products, furniture, and carriages, are the leading industries. Electric power, used in Seattle for manufacturing and other purposes, is derived from Snoqualmie Falls, on the river of the same name, 24 miles from the city. The falls are 270 feet high, with water power at high water estimated at 100,600 horse power, and at low water 30,000 horse power. The Puget Sound Naval Station is at Port Orchard, 14 miles from Seattle. Here is a dock 650 feet long, constructed at a cost of more than \$600,000.

The government is vested in a mayor, elected biennially, and a common council, consisting of a single chamber. The administrative officers include a treasurer, comptroller, corporation counsel, boards of public works, health, parks, library, etc. The public school affairs are con-

trolled by a board of education, separate from the municipality. The water-works, which cost \$2,500,000, are owned by the city. The daily supply is 23,000,000 gallons. The reservoirs in the city have a storage capacity of 50,000,000 gallons. The municipal water revenues in 1901 were \$227,000. The city is engaged (1903) in the installation of an electric plant to cost \$550,000.

First settled in 1852, Seattle was laid out in 1853 and named after a noted Indian chief. In 1856 it was unsuccessfully attacked by the Indians. The business portion was almost entirely destroyed by fire in 1889, the loss aggregating about \$10,000,000. The population in 1870 was 1107, and in 1880, 3533; in 1890, 42,837; in 1900, 80,671.

SEA-URCHIN. The name applied to species of the echinoderm class Echinoidea. The sea-urchin of the coast north of Cape Cod (*Echinus* or *Strongylocentrotus Drobachiensis*) is common among rocks, ranging from low-water mark to fifty or more fathoms. It eats seaweeds, and is also a scavenger, feeding on dead fish and the like. Certain kinds are known to bore for a little way into limestone rocks or coral reefs, where they are protected from the waves. Sea-urehins have scattered over the surface, among the spines, microscopic button-like bodies called *spharidia*, which are thought to be organs probably of taste or smell. They evidently react to odors. The eggs are numerous and small. After hatching the young sea-urchin enters the free-swimming larval or pluteus stage, passing through a complicated metamorphosis. On the other hand, certain forms (*Anochanus Sinensis*) have a direct development, the larval stage being suppressed. A Chilean form and also a South Pacific species of *Hemiaster* carry their young in brood-pouches, and they also directly develop, for no pluteus sea-urchin larva were captured by the *Challenger* expedition in the Southern Ocean. The large sea-urchin of the Mediterranean is an article of food, and the Indians of the northwest coast eat the large local species. See ECHINOIDEA; ECHINODERMATA.

SEAWEED or **SEAWARE.** In a wide sense, any plant of the class Algae; in a more restricted sense, only plants of this class which live in the sea. The term is also applied to any plant growing in the sea. Several species are edible, the most important of these being Irish or carrageen moss, used as a cattle food and also in the preparation of jellies (blanc mange and similar dishes). Dulse, or dillesk, and kelp, or tangle, are also used to a limited extent as human food.

Eel grass has been used in filling mattresses, cushions, etc., and in sheathing houses. Seaweed ashes formerly supplied much of the alkali used in soap and glass making and for the preparation of iodine. (See KELP.) As a rule, however, cheaper sources of most of the materials furnished by seaweed have been discovered. The principal use of seaweed is as a manure, for which purpose it is extensively employed on many coasts, some of the best farms of New England being maintained largely by the use of seaweed. Exact data as to the quantity used are not available. The use of seaweed as a manure is confined to a narrow strip of coast because the material is very bulky (contains from 70 to 90 per cent. of water), and consequently cannot be profitably transported far. It has been carried

inland, however, to a distance of from 8 to 10 miles. It is undoubtedly an economical practice to allow the seaweed to dry partially on the beach before carting it, but it is not advisable to allow it to dry out so thoroughly that it will not readily decompose in the soil. It should not be subjected to any considerable amount of fermentation or leaching, since a large proportion of its valuable constituents—nitrogen and potash—would thus be lost. On account of its bulk and wateriness, seaweed must be applied in very large amounts (20 to 30 tons per acre) in order to supply sufficient amounts of nitrogen, phosphoric acid, and potash for the needs of crops. The potash of seaweed, which is probably its most important fertilizing constituent, is subject to wide variation. Fresh seaweed often contains 1 per cent, and more of this constituent, but it is soluble and is rapidly lost if the weed is subjected to washing. The lime is also very variable, owing to the adherence of shells, etc., but normally it is probably less than 1 per cent.

Seaweed belongs to the same class of manures as barnyard manure and green manures, and, like them, proves valuable on porous, sandy soils. It differs from average barnyard manure in its higher percentage of potash and lower percentage of phosphoric acid. While, like barnyard manure, it is a general fertilizer, it is not so well balanced, and since its continued use alone is likely to result in a one-sided exhaustion of the soil, bone or other phosphatic fertilizer should be applied with it. An advantage which seaweed has over barnyard manure is its freedom from weed seeds, insects, etc. Since it contains soluble potash, it is considered a potassic manure especially valuable for crops like potatoes, clover, etc., which are 'potash feeders.'

The nitrogen of seaweed is in organic form, and is therefore not available to plants until decomposition and nitrification have taken place, processes which usually occur rapidly in the soil. It may be applied fresh as a top-dressing (on grass) or may be plowed in. On account of the rapid decomposition, especially of the more succulent and mucilaginous kinds, seaweed furnishes a valuable means of starting fermentation in manure, compost heaps, peat, etc. Red grass is about as rich in fertilizing constituents as the other kinds analyzed, but is of less actual fertilizing value because it decomposes slowly in the soil, for which reason it has been condemned as a worthless manure, although valuable as a mulch. Its value as a fertilizer could no doubt be greatly increased by composting. The objections to the use of seaweed ashes as a fertilizer are the difficulty and expense of burning and the loss of nitrogen. Seaweed, when applied in the spring, has been found to injure the quality of potatoes, probably on account of the chlorine it contains. It also apparently delays maturity as compared with barnyard manure. It seems, however, to reduce scab when applied at planting. Undoubtedly the safest practice with potatoes and other plants injured by chlorine is to apply the seaweed the previous summer or fall. Consult *Rhode Island Experiment Station Bulletin 21; Transactions Highland and Agricultural Society, 1898*, p. 118; *Agricultural Students' Gazette*, new series 9 (1898), p. 11; Storer, *Agriculture in some of Its Relations with Chemistry* (New York, 1897).

SEA'WELL, MOLLY ELLIOT (1860—). An American author. She was born in Gloucester County, Va., October 23, 1860, and began to write at an early age. She published her first novel in 1889, but attracted wider public attention in the following year by *Little Jarvis*, a story for boys. Perhaps the most noteworthy of her novels is *The Sprightly Romance of Mairae* (1896), a lively tale constructed on a French model. Others are *Throckmorton*, *Maud Marun*, *Children of Destiny*, *The Loves of the Lady Arabella*, *The House of Egreavot* (1899), and *The Fortunes of Pip* (1903). Some of her juvenile stories have been very popular; the best of them is perhaps *Gavin Hamilton*.

SEB. or **KIB.** An Egyptian deity, identified by the Greeks with Cronos. (See **SARIRN.**) He was the husband of Nut (q.v.), and is sometimes called the father or leader of the gods, since he was the father of Isis, Osiris, Typhon, and Nephthys. Seb plays but little part in Egyptian mythology, excepting in the legend of the destruction of mankind by Re.

SEBAL'DUS (†801). A saint in the Roman Catholic Church, and one of the patron saints of Nuremberg. He is said to have been the son of a Danish king. He studied in Paris and, according to the tradition, married a daughter of King Dagobert III., but on the day following their marriage the vows were dissolved, and for the ensuing years Sebaldus was a stern ascetic, and lived as a hermit in a forest near Nuremberg. He was buried in Saint Peter's Church at Nuremberg. He was canonized by Pope Martin V. in 1425. The day of his death, August 19th, is still commemorated in Nuremberg.

SEBASTE, See **SAMARIA**.

SEBAST'IAN, DOM (1554-78). King of Portugal from 1557 to 1578. He was the post-humous son of the Infante John and succeeded his grandfather John III. on the throne, under the guardianship of his grand uncle the Cardinal Henry. Ambitious of a conqueror's fame and desiring also to further the spread of Christianity in Northern Africa, Sebastian took advantage of the internal disputes raging in Morocco to invade that country in the summer of 1578, but on August 4th the Portuguese army was almost annihilated at Kas-el-Kebir (Alcazar Quivira) by the forces of the Sherif Muley-Malek. Sebastian was among the slain, but his body was never found, or at least never satisfactorily identified, and this gave occasion for the appearance of several pretenders, claiming to be the missing king, the most prominent of whom made himself known at Venice in 1598, and after a career of two years fell into the hands of the Spaniards, who probably put him to death. In popular Portuguese legend, Sebastian is not dead, but will reappear to restore the people to their ancient glory. Consult: Machado, *Memorias para a historia de Portugal que comprehendem a governo del rey Dom Sebastião* (Lisbon, 1736, 51); d'Autas, *Les four Dom Sebastien* (Paris, 1865).

SEBASTIAN (Lat. *Sebastianus*), SAINT. A celebrated martyr of the early Church. His history is contained in the *Acta Sancti Sebastiani*, which probably dates from the close of the fourth century, and is believed to embody in the main a trustworthy tradition. Sebastian, according

SEBASTIANUS was born at Narbonne, in Gaul, and educated at Milan. Although a Christian, he joined the Roman Army, without revealing his religion, and with the view of assisting and protecting the Christians in persecution. He remained a layor under Diocletian, and became commander of the first cohort at Milan. When his religion was discovered he was condemned to death in Rome by a troop of Mambrian archers, who transfixed him with numberless arrows, and left him as dead. But a Christian lady, Irene, finding that life was not extinct, had the body removed to her house, where life was restored; and although the Christian community desired to conceal his recovery, Sebastian again appeared in public before the Emperor, to profess his faith in Christianity. Diocletian condemned him to be beaten to death with clubs in the amphitheatre; and his body was hung into one of the sewers of the city, in which it was discovered, according to the *Acta*, by means of an apparition, and carried by a Christian lady, Lucina, to the catacomb which is still called by his name. The date of his martyrdom was January 20, 288, and this is his feast day with the Latins. By the Greeks the feast is held on the 18th of December. The festival was celebrated with great solemnity in Milan as early as the time of Saint Ambrose, and it was observed in the African Church in the fourth century. Sebastian is patron saint against the plague. It is related that in 630 a great pestilence in Rome ceased when an altar was dedicated to him in the Church of Saint Eudocia. The martyrdom of Saint Sebastian is one of the most familiar subjects of Christian art. He is usually represented as young and beautiful, bound to a tree, and pierced by many arrows. There is another saint of the same name who is said to have suffered martyrdom in Armenia.

SEBASTIANI. sã'bas-tã'niã. FRANÇOIS HORACE DE LA PORTA (1772-1851). A marshal of France. He was born November 10, 1772, near Bastia, in Corsica. He entered the army as a sub-lieutenant of infantry in 1792, and was one of Napoleon's most devoted partisans. He fought at Marengo (1800), and became brigadier-general in 1803 and was wounded at Austerlitz (1805). In May, 1806, he was sent as diplomatic representative to Turkey, where he succeeded in alienating the Porte from Russia and England. He fought in Spain in 1807 and distinguished himself in the Russian campaign of 1812, and at Leipzig in 1813, and fought with extreme bravery in the campaign of 1814. On the exile of Napoleon to Elba he gave his adherence to the Bourbon Government, but joined his old master on his return. He was Minister of Marine for a short time in 1830 and Minister of Foreign Affairs, with a slight interruption, from 1830 to 1834. He then went as Ambassador to Naples, and, 1835-40, to London. He was made a marshal of France in 1840.

SEBASTIANO DEL PIOMBO, sã'bas-tã'niã del pe-om'bo (c.1485-1547). An Italian painter of the High Renaissance. His surname was Luciani, and he derived his name from his office of the Papal seal (*piombo*). He was born in Venice, was a pupil of Bellini and of Giorgione, and Morelli sees in his earliest works the influence of Piero di Cosimo. To his Venetian period belong a "Pietà" in possession of Lady

Layard (Venice), and the altar-piece of San Giovanni Crisostomo at Venice, in the manner of Giorgione. In 1509 he was invited to Rome by Agostino Chigi, for whom he painted in the Villa Farnesina eight lunettes in the garden lodge, and in the grand hall a "Polyphemus," as pendant to Raphael's "Galatea." Having gained but little success in this rivalry, he formed in 1512 his association with Michelangelo, endeavoring to unite Venetian coloring with the latter's drawing, and thus to surpass Raphael. Michelangelo himself designed the "Pietà" in the Hermitage (Saint Petersburg), and another in San Francesco at Viterbo, and parts of the "Resurrection of Lazarus" (1519, National Gallery, London), which is Sebastiano's principal historical production. Other works showing his influence are the "Martyrdom of Saint Agatha" (1520, Pitti Palace); "Visitation" (1521, Louvre); a "Transfiguration" in fresco, and a "Flagellation" in oil, in San Pietro in Montorio (Rome).

Under Michelangelo's influence Sebastiano lost the Venetian breadth of handling; his paintings became smooth in character and heavy in chiaroscuro. He devoted much time to adapting oil painting to fresco, and endeavored in vain to induce Michelangelo to adopt his experiments in the Sistine Chapel. His paintings on slate, like the "Holy Family" at Naples, and on stone, like the two "Ecce Homo" at Madrid and Saint Petersburg, are very interesting. In 1531 he was appointed keeper of the Papal seals, and from this time he practically ceased painting, residing at Rome until his death there, on June 21, 1547.

In portraiture Sebastiano's art was more independent, and he achieved the highest results, both as to characterization and perfection of technique. In his portraits the influence of Raphael is apparent, so much so that some of the most beautiful portraits formerly attributed to the latter are now recognized as Sebastiano's — as, for example, the matchless "Fornarina" (1512), in the Uffizi, long supposed to be the mistress of Raphael, and the portrait of an unknown young man in the gallery of Budapest. Morelli also ascribes to his early period the beautiful "Violin Player," in the Sciarra Palace, Rome. He painted the portraits of a series of popes, the best known of which is that of Clement VII., in the Naples Museum. Other celebrated examples are those of Andrea Doria, in the Doria Palace, Rome, and of Cardinal Pole in the Hermitage (Saint Petersburg). Consult: Vasari, *Vite* (Florence, 1878); Richter, in Dohme, *Kunst und Künstler Italiens* (Leipzig, 1878); Milanesi, *Les correspondants de Michel Ange*, vol. i. (Paris, 1890); and the dissertation by Propping (Leipzig, 1892).

SEBAS'TOPOL, or **SEVASTOPOL,** *Rus. pron. sã'vã-s-tã'põl-y'.* A seaport of Russia, in the Government of Taurida, on the southern shore of a deep inlet of the Black Sea, in the southwestern part of the Crimea, about 48 miles southwest of Simferopol (Map: Russia, D 6). The inlet is about 4 miles long and three-quarters of a mile wide, and is one of the best roadsteads of Russia. The main inlet forms four bays, between two of which the city proper stands on elevated ground. The entrance to the roadstead is strongly fortified, and there is a chain of forts south and north of the city. There are

extensive docks along the shore. The climate is very healthful and pleasant. The city was fully recovered from the effects of the Crimean War, but its commerce has been deflected almost entirely to Feodosia, and the harbor is used mostly as a naval station. There are monuments to the heroes of the Crimean War and two museums. The principal industries are shipbuilding and wine-making. Sebastopol forms with the surrounding country a separate administrative district. The population of the city proper, in 1897, was 44,016. The Greek colony of Chersonesus, situated near the present site of Sebastopol, was well known to the Russians under the name of *Korsuū* at the period of the introduction of Christianity into Russia. In the sixteenth century the Tatar settlement of Akhtiar was founded here. In 1784 the town of Sebastopol was founded by Catharine II., and in 1804 it became the chief naval station of Russia on the Black Sea. It was strongly fortified under Nicholas I. See CRIMEAN WAR.

SEBENICO, sâ-bâ'nô-kô (Slav, *Šibenik*). A town in the Crownland of Dalmatia, Austria, at the mouth of the Kerka in the Adriatic, 170 miles southeast of Trieste (Map: Austria, E 5). It is built on a steep slope, and was formerly defended by walls and towers. The town has an excellent harbor, connected with the sea by a canal. There is considerable shipping trade. Population (commune), in 1900, 24,751.

SÉBILLOT, sâ'bô'yô', PAUL (1843-). A French painter and folk-lore writer, born at Matignon, Côtes-du-Nord, and educated at Rennes. He went as a young man to Paris to become a notary, but turned instead to painting. Between 1870 and 1883 he exhibited more than twenty pictures in the Salon. His sketches of out-of-the-way corners in Brittany introduced him to the subject to which he afterwards devoted himself, that of folk-lore study. In 1885 he founded and edited the *Revue des Traditions Populaires*. His works on folk-lore include: *Contes populaires de la Haute Bretagne* (3 series, 1880-82); *Traditions et superstitions de la Haute Bretagne* (1882); *Gargantua dans les traditions populaires* (1883); *Contes des provinces de France* (1884); and *Légendes, croyances et superstitions de la mer* (1886-87).

SEBORRHŒA (Neo-Lat., from Lat. *sebum*, tallow + Gk. *rhôa*, *rhôin*, flow, from *rhôiv*, *rhôin*, to flow). A disease of the sebaceous glands characterized by an increased flow of their secretion. Seborrhœa may invade the hairy parts, appearing in one of four varieties: (1) Dry seborrhœa; (2) concrete seborrhœa; (3) oily seborrhœa; (4) circinate seborrhœic eczema; or it may invade the smooth parts, appearing as (1) seborrhœa sicca; (2) seborrhœa concreta; (3) seborrhœa oleosa; or (4) seborrhœa corporis.

All these varieties are characterized by the formation of collections of sebum with dust, scales of the epidermis, and crusts, more or less oily, more or less gray or dark. It is probably parasitic; but while many parasites have been discovered in eczema seborrhœicum, their precise rôle is yet undetermined. Seborrhœa is the most frequent cause of baldness, and needs treatment by a physician. Besides internal tissue-builders, tonics, and special food, local applications of belladonna, benzoin, sulphur, chloral, salicylic

acid, ichthyol, and green soap are useful in selected cases.

SECANT, SO TANGENT, TRIGONOMETRY.

SECCHI, sê'sh, PIETRO ANGELO (1818-78). An Italian astronomer, born at Bioglio. He joined the Jesuit Order in 1833, and after studying in Italy, England, and at Georgetown College in Washington, D. C., he served for a time as professor of mathematics and physics at the latter institution. He became director of the observatory of the Roman College in 1849, and was permitted to remain in that position after the expulsion of the Jesuits, 1870-73. His discoveries in solar physics and spectroscopy were numerous and important, and he also made magnetic and meteorological observations. Among his works are: *Catálogo delle stelle* (1867); *Avvicinamenti sulle protuberanze solari* (1869); *Passata solare* (1869); *Researches on Electrical Rheometry* (Smithsonian Contributions, vol. VII, 1852); *Le stelle* (1870); and *Le stelle, saggio di astronomia subarale* (The Stars, vol. XXXIV of the International Scientific Library, Leipzig, 1878). Consult *Pohle, Angelo Secchi* (Cologne, 1883).

SECESSION (Lat. *secessio*, separation, schism, from *secedere*, to go apart, from *se*, apart + *cedere*, to yield, depart, go). In United States history, the term applied to the withdrawal of a State from the Union. The word 'secession' seems to have been first used in the debates in the Philadelphia Convention on July 5, 1787, by Elbridge Gerry, who remarked that unless some compromise should be made "a secession would take place." The idea of secession appeared in New England about fifteen years after the formation of the Union in connection with the acquisition of Louisiana. This addition of territory was strongly opposed by the New England Federalists through fear that ultimately it would result in the destruction of New England's pre-dominance in the Union. Annexation of Louisiana was vigorously resisted as unconstitutional without the consent of all the States, inasmuch as the Constitution was alleged to have been made only for the original thirteen States.

Jefferson's Embargo Act and the War of 1812 led to considerable disaffection in New England, which culminated in the Hartford Convention (q.v.). The members of that body, however, afterwards denied that the subject of secession was broached in any form and its journal does not indicate any trace of such a discussion. In 1832 the nullification movement in South Carolina, provoked by dissatisfaction with the newly established protective tariff, seemed to threaten the stability of the Union. After this the history of secession is inextricably bound up with the question of slavery. During the next thirty years isolated threats of secession were frequently made in the South whenever Northern hostility appeared to imperil the interests of slavery. Nor did the idea entirely die out in New England, where at the time of the agitation over the annexation of Texas a number of anti-slavery Whig members of Congress, headed by John Quincy Adams, issued an address to their constituents declaring that annexation would fully justify a dissolution of the Union.

The question which brought the secession movement to a head related to the exclusion of

Majority in the Territories. (See TERRITORIES.) The Secession question began to assume an importance of a national and took to secure the cooperation of the slave States in a movement looking toward secession, but the plan failed. The enactment of the so-called Compromise Measures of 1850 (q.v.) again raised the question but in one or two Southern States, where it was made an issue, the secessionists were defeated. Then came the passage in some of the Northern States of so-called personal liberty laws in contravention of the Fugitive Slave Law, the John Brown raid, and the election of President Lincoln, all of which intensified the feeling in the South in favor of withdrawal from the Union. In the South the right of secession was regarded as one of the reserved powers of the States, there being no prohibition in this respect in the Constitution nor any power conferred upon the Federal Government to compel a State to remain in the Union against its wishes. It is worthy of note that as late as 1860 many persons of prominence in the North, among them Horace Greeley, acknowledged the right of secession, only insisting that the step should be taken "with the deliberation and gravity befitting so momentous an issue." The regular machinery by which the work of secession was accomplished was a State convention called by the Legislature or self-assembled, as in Texas. (See CIVIL WAR; CONFEDERATE STATES OF AMERICA; and UNITED STATES, and authorities cited under those titles.)

SECESSION, WAR OF. See CIVIL WAR IN AMERICA.

SECESSIONISTS. In modern German art, more especially in painting, the adherents of that tendency which, in subject, form, and coloring, deviated from traditional conceptions to such an extent as to result in the secession of the younger generation of artists from the older art unions, and in the arrangement of separate exhibitions by the Munich, Vienna, and Berlin 'Secessions' respectively.

SECHTER, sĕk'tĕr, SIMON (1788-1867). An Austrian music teacher and contrapuntist, born at Friedberg, Bohemia. In 1851 he became Court organist and professor of harmony and composition at the Vienna Conservatory. He wrote much church music, numerous fugues, pianoforte pieces, preludes, the burlesque opera *Ab Hutsch-Hutsch* (1811), a *Generalbass-Schule*, and songs. His greatest work is *Die Grundsätze der musikalischen Komposition* (1853-54), a most valuable musical treatise.

SECKENDORFF, zĕk'en-dŏrf, FRIEDRICH HENRICH, Count (1673-1763). A German field-marshal and diplomat. He was born at Königsberg, Prussia. He served successively, from 1693, in the English-Dutch and Imperial armies, rose to the rank of colonel, and fought with conspicuous bravery during the War of the Spanish Succession. From 1709 in the service of Augustus II. of Poland and Saxony, he operated in Flanders (1710-11) and attended the peace negotiations at The Hague. Made lieutenant-general after suppressing an uprising of the Poles in 1713, he took part in the siege of Stralsund by the Prussians (1715). Appointed lieutenant-field-marshal by Emperor Charles VI., in 1717, he fought at Belgrade, and in 1718 in Sicily, and was raised to the dignity of count of the Empire.

In 1721 he became Governor of Leipzig, but also remained in the Imperial service, was made Feldzeugmeister in 1723, and sent as Ambassador to Berlin in 1726. Obtaining leave to join the army on the Rhine, in 1734, he again rendered important services, and, although greatly hampered by the inactivity of Prince Leopold of Anhalt-Dessau, signally defeated the French at Klausen, October 20, 1735. He was sent to Hungary in 1737 as field-marshal to command the Imperial forces against the Turks. Victorious at first, he was blamed for the unsuccessful progress of the campaign, was recalled to Vienna, tried, and was kept in durance at Gratz until November, 1740, when the investigation was suspended. In 1741 he resigned his offices and, transferring his allegiance to Bavaria, rendered valuable services to Emperor Charles VII. during the War of the Austrian Succession. On the election of Emperor Francis I. Seckendorff obtained from Maria Theresa his reinstatement into all his former offices. In December, 1758, Frederick II., who bore him a grudge for the advice given to Austria, had him kidnapped by a detail of thirty hussars, while he was at church, and kept him in custody at Magdeburg until May, 1759. Seckendorff died at Meuselwitz, November 23, 1763.

SECKENDORFF, GUSTAV ANTON, Baron (1775-1823). A German writer, born at Meuselwitz. After studying at Leipzig, Freiburg, and Wittenberg, he traveled for two years in the United States (1796-98). He chiefly devoted himself, however, to recitations and lectures on aesthetics, which he delivered under the pseudonym of Patrick Peale, and to literature. In 1814 he was appointed professor at the Carolinum in Brunswick, but in 1821 went again to America and died in poverty at Alexandria, Louisiana. His works include the tragedies *Otto III.* (1805) and *Orsina* (1816), a sequel to Lessing's *Emilia Galotti*; *Kritik der Kunst* (1812); and *Beiträge zur Philosophie des Herzens* (1814).

SECKENDORFF, VEIT LUDWIG VON (1626-92). A German statesman and historian, born at Herzogenaurach, near Erlangen. Upon leaving the University of Strassburg he entered the service of his patron, Ernst the Pious, Duke of Gotha, rose to the post of privy councilor and chancellor, and brought about important reforms in the ducal territories. In 1664 he became chancellor to Duke Moritz of Saxony-Weitz, after whose death in 1681 Seckendorff retired to his estate at Meuselwitz. Called to Berlin, in 1691, by the Elector Frederick III. of Brandenburg, to adjust certain sectarian difficulties, he was rewarded with the appointment as chancellor of the newly established university at Halle. A distinguished student of political science and the foremost Protestant Church historian of his time, he published *Der deutsche Fürstenstaat* (1655), for a long time the standard work of its kind at the German universities; *Der Christenstaat* (1685); and, most important of all, the *Commentarius Historicus et Apologeticus de Luthéranismo* (1688), a documentary refutation of Maimbourg's *Histoire du Luthéranisme*.

SECOND. For musical usage, see INTERVAL; for mathematical, see CIRCLE.

SECOND ADVENT OF CHRIST. The return of Jesus Christ in visible form to earth. On the basis of certain sayings of Jesus, the early

Church expected that within a comparatively short period after His ascension He would again come and usher in the full glory of the Messianic Age. The passages in the Gospels containing these sayings are: (1) Mark vi. 1-11; Matt. ix. 35-x. 16 = Luke ix. 1-5; (2) Mark ix. 1 = Matt. xvi. 28 = Luke ix. 27; (3) Mark xiii. 1 = Matt. xxiv. 1 = Luke xxi. 1; (4) Mark xiv. 62 = Luke xxii. 69 = Matt. xxvi. 64; (5) Luke xvii. 20-xviii. 18. A critical examination of these passages reveals the fact that sayings of Jesus which in one Gospel are of a broad, general character are reported in another Gospel in a much more precise and specific form: e.g. Mark ix. 1, "Who shall not taste of death until they see the *Kingdom of God* come," becomes in Matt. xvi. 28, "Who shall not taste of death until they see the *Son of Man* coming in His *Kingdom*." This tendency manifested itself almost immediately after His departure, though He had warned against speculation on such points (cf. Acts i. 6-7). It appears in the first formulation of Christian doctrine by Peter in the Pentecost sermon in the use of Old Testament expressions (Acts ii. 20, 35) and more plainly in the words reported in Acts iii. 20-21. The highly figurative language of the Old Testament already employed by Jesus in His eschatological discourses, taken in a literal sense, was of great influence in this respect. As the years passed, the more enlightened leaders of the Church came to feel that the true meaning of Jesus' words and realization of His promises was to be found in the eternal, spiritual heavenly life (compare I. Peter with the sermon of Peter in Acts; cf. Paul in I. Cor. xv.; also the Gospel of John) rather than in a material, earthly kingdom. But the doctrine of the *Parousia*, or second coming of Jesus in a comparatively short time, was by no means given up. It continued to wield great influence on Christian thought and retained its place in the general eschatological conceptions, as the great event which was to usher in a new era—the full manifestation of the Messianic Age. The practical consequences of such conceptions were sometimes serious and necessitated wise and cautious treatment (cf. II. Thess.; II. Peter iii. 1-13).

In later times the doctrine has been held in two forms; the Second Advent of Christ will be either (1) premillennial, i.e., before the age of the great prosperity and triumph of the Church; or (2) postmillennial, after this age and immediately before the general judgment. The former view is advocated upon the ground of certain interpretations of Rev. xx. 4-7, supported by other passages of Scripture, and more particularly by the general conception, thought to be derived from the Scriptures, that the present dispensation does not contain in it, under the plan of God, the means necessary to bring the world to Christ. Hence it will be necessary that Christ, the King, shall Himself come to take the government upon His shoulder and introduce the universal sway of His power. This view is held by an active school of evangelists, by many individual Christians in all communions, and by many who have united into separate denominations, such as the "Seventh Day Adventists." The other view regards the exegesis of the premillennialists as unsound, and their views of the present condition and tendencies of things as pessimistic; bases its conception of the gradual

spread and final triumph of the Gospel upon the definite promises of the word and the analogies of God's methods everywhere else in Providence; and urges for its connection of the Second Advent with the Judgment, the unmistakable meaning of every plain passage of Scripture. See ADVENTURES; ESCHATOLOGY; JUDGMENT; FINAL; MILLENNIUM.

SECONDARY QUALITIES. All the attributes of an object of perception which were supposed to be due to any peculiarity of the sense constitution of the percipient; over against secondary qualities were placed primary qualities (q.v.), which were supposed to be apprehended by the percipient as they are in themselves. Thus, color was called a secondary quality, while extension was called primary, because it was supposed that the human eye gave the characteristic of color to the object, while the spatial character of the object was regarded as original. This distinction has played a great part in the philosophy of the last three centuries, but cannot be considered ultimate. See KNOWLEDGE, THEORY OF.

SECONDARY SCHOOLS. A term applied to high schools, academies, and other schools which prepare pupils for college courses, or give instruction of the same general grade as that required for college preparation. The public school in England, the Lycée in France, and the Gymnasium and Realschule in Germany, give instruction corresponding to that of the secondary schools in the United States. In the latter part of the nineteenth century American secondary schools, especially the free high schools, became less distinctively schools for college preparation, and more and more "finishing schools," i.e., schools giving a general preparation for business life or for professional education, without consideration of college training. In this connection manual training, modern languages, and elementary science were introduced, and the old classical disciplines cut short or rendered optional. The broadening of college courses, however, and especially the spread of the elective and accrediting systems, rendered the transition from secondary schools to colleges easy even under the new conditions; accordingly these schools are still the chief institutions for college preparation, as they are the chief sources for training supplementary to that given in elementary schools. See ACADEMY; HIGH SCHOOL; NATIONAL EDUCATION, SYSTEMS OF; PUBLIC SCHOOLS.

SECOND SIGHT. A supposed faculty of 'internal' sight, whereby persons see distant occurrences or foresee future events; it is so called because, for the time, it takes the place of normal sight. Recently this power has been claimed by those who profess clairvoyance (q.v.). Historically, second sight is of interest because of the deeply rooted belief in its reality prevalent in Northern Europe among the Celtic population generally, and especially in the Hebrides and Scottish Highlands. Some of the Scottish seers asserted their power to impart the gift by teaching; others declared it to be hereditary. It was often believed that children, horses, and cows, as well as men, were affected with the visions. The most commonplace and trifling matters were revealed and predicted, coming events being fore-

of the secret societies.
Secrets, ed. by Bir-
 Martin, Western Isl-
 Penman, "A Tour in Scot-
Voluptés and Travels (Lon-
 c. *The Night Side of Nature*
 (Lyon, *Providence Culture* (ib.,
 S. Dyer, *The Ghost World* (Philadelphia,
 Eug. Cook, *Lam and Common Sense*
 London, 1894).

SECRET (OF, Fr. *secret*, from Lat. *secretus*,
 ret, separated, p. p. of *secreare*, to separate,
 rom se, apart) + *concre*, to separate). One of
 the prayers of the mass of the same general form
 to be collect, but recited by the priest in so
 low a voice as not to be heard by the people,
 whence the name *secretæ* is derived. It follows
 immediately after the oblation of the eucharistic
 bread and wine, and was in the earlier ages the
 only prayer of oblation provided in the missal;
 the Sacramentary of Saint Gregory calls it the
Oratio super oblata.

SECRETAN, sek-rét'an', CHARLES (1815-95).
 A Swiss metaphysician, born at Lausanne. He
 was a pupil of Vinet at Bale in 1835, and of
 Schelling in 1837. In the latter year he founded
 the *Revue Suisse*, and in 1838 was appointed pro-
 fessor of philosophy at the University of Lau-
 sanne. The work of Secrétan, at once a philoso-
 pher and a theologian, was one of the most
 interesting attempts that have been made to
 reconcile the dogmas of Christianity with the
 principles of philosophy. The system of Secrétan,
 evolved from that of Descartes, is best set
 forth in his principal book, *La Philosophie de*
la liberté (2 vols., 1848-49). Other works are
La philosophie de Leibnitz (1840), *La raison et*
le christianisme (1863), and *La civilisation et*
la croquance (1887).

SECRETARY. In the Federal Government
 of the United States, the head of an executive
 department and a member of the President's
 Cabinet. See the articles on the various depart-
 ments, as STATE, DEPARTMENT OF, etc.

SECRETARY BIRD, or SERPENT-EAGLE. A
 remarkable raptorial bird (*Serpentarius secre-*
tarius) of South Africa, the sole representative
 of a separate family (Serpentariidae), classified
 between the turkey-buzzards and the true vul-
 tures. It is about four feet long, and has very
 long, unfeathered legs; the plumage is bluish
 gray, and there is an erectile crest of single
 feathers, suggesting quill pens carried above the
 ears. It feeds on reptiles of all kinds, which it
 devours in great numbers, and is so highly valued,
 on account of the constant war which it wages
 against serpents, that a fine is inflicted in Cape
 Colony for shooting it. It fearlessly attacks the
 most venomous serpents, stunning them with
 blows of its knobbed wings or feet, or seizing and
 carrying them into the air so high that they
 are killed when let fall. Small serpents are
 swallowed entire; the larger ones are torn to
 pieces. The secretary is most frequently seen in
 pairs, or solitary. It is tamed as a protector of
 poultry yards, but if not sufficiently fed is apt
 to peck at a chicken or duckling. It con-
 tinues to breed in the year and occupies it year
 after year. (See *Illustrations of Birds* (London, 1900);
Journal of the Royal Society (London, 1893-96).

SECRETARY OF STATE. An ancient office
 of importance in the Government of the United
 Kingdom. The first authentic record of its ex-
 istence is in the reign of Henry III., when John
 Mainsell is described as "secretarius noster." Two
 secretaries were first appointed toward the
 close of the reign of Henry VIII. At the union
 of 1707 Anne added a third secretary of State
 for Scotland, but this office was soon abolished.
 In the reign of George III. there were at first
 two secretaries; and for a time, until 1782, a
 third for America. The two secretaries directed
 home affairs; to one the foreign affairs of the
 northern department were committed; to the
 other those of the southern department. Irish
 affairs belonged to the province of the elder se-
 cretary. There are now in the United Kingdom
 five principal secretaries of State, who are re-
 spectively appointed for home affairs, foreign
 affairs, war, the colonies, and India. They are
 always members of the Privy Council and of the
 Cabinet. For the American Secretary of State,
 see STATE, DEPARTMENT OF.

SECRET ASSOCIATIONS. Societies which
 admit members by an initiation and subscription
 to an oath, and often possess an elaborate ritual
 leading to higher degrees, with the use of symbols,
 pass-words, and grips as a means of recognition
 among members.

Many secret societies are found on the west
 coast of Africa. Among the Polynesians societies
 which unite large numbers of freemen in a free-
 masonry of common interest virtually control the
 economic and the political life. (See DUK-DUK.)
 The associations of priests that conducted the
 mysteries of the ancient religions are counted as
 the forerunners of later societies. The secrecy
 was due to one or both of two causes: (1) The
 tendency to hide all knowledge of life in mystical
 forms, away from the contamination of the vul-
 gar, and to keep the multitude under the sway of
 superstition; or (2) the danger of maintaining
 such advanced ideas in the face of ignorance and
 prejudice. The political element entered at a
 very early date. The Pythagoreans combined phi-
 losophy and politics. The East was a fertile ter-
 ritory for secret societies. The Ismaili and after-
 wards the Assassins (q.v.) were organized in
 behalf of the claims of Ali's successor to the
 throne of the caliphate. It is customary
 among many Protestants to consider the
 Jesuits as a secret society in spite of their re-
 lation to the Church, but the notion is based
 upon a misapprehension. Secrecy and strange
 ceremonials often accompanied gatherings of the
 Middle Ages that first speculated on religion and
 science. The Secret Tribunals of Westphalia
 (the Vehmgerichte) and the Beati Paoli of Sicily
 were constituted to administer justice in an age
 of anarchy. On the other hand, there were cer-
 tain criminal associations of brigands who levied
 tribute upon the people, best known of which is
 the Mafia (q.v.). With the awakening of mod-
 ern thought secret societies were formed with
 speculative tendencies. The Rosicrucians (q.v.)
 mingled mysticism and occultism. The Illuminati
 sought social amelioration and were a source of
 republican propagandism. In the nineteenth cen-
 tury secret political societies have taken part in
 nearly every revolution. (See CARBONARI; HE-
 TERIA PHILIKE; FENIAN SOCIETY; NIHILISM.)
 China is honeycombed with secret societies, many

of which have existed from very ancient times. (For the rôle played by the Boxers in the uprising of 1900, see CHINESE EMPIRE.) Many societies are ostensibly philanthropic, and some are purely benevolent, providing for marriage, burial, and business loans. In the United States there are many secret societies, in which, however, the fraternal element largely predominates. See SOCIETIES.

Consult: Heckthorne, *Secret Societies of All Ages* (London, 1899), which contains a bibliography.

SECRETION (Lat. *secretio*, separation, from *secretus*, secret, separate). A physiological process by which certain materials are separated from the blood to form new substances called secretions, through the agency of certain highly specialized cells. These materials are of two kinds: *true secretions*, which have some definite function to perform in the animal economy, and *excretions*, which are discharged from the body as useless or injurious. Secretions are further distinguished by the fact that they do not exist already formed in the blood, but require for their production special cells and a process of elaboration; while excretions are merely abstracted from the blood in the same form in which they already occur in that fluid. Both secretion and excretion contribute to health and nutrition, the one by performing some positive function, as aiding digestion, the other negatively by freeing the body of the products of destructive metabolism, which if retained would cause disease.

Secretion is performed by the following organs: The serous and synovial membranes; the mucous membranes, with their special glands, buccal, gastric, and intestinal; the salivary glands and pancreas; the mammary glands; the liver; the lachrymal glands; the kidneys and skin; and the testes. Secretion takes place by two different processes, the one physical and the other chemical. The physical processes are those of filtration and dialysis; the chemical process is one of true secretion. Both processes are employed in the secretion of the urine; the former within the Malpighian bodies and the latter in the *tubuli uriniferi*. (See KIDNEYS.) The simplest form of secretion is that of the serous and synovial membranes, the pleura, the pericardium, peritoneum, and the lining of the joints. These are lubricated by a fluid transuded directly through the flat endothelial cells lining these membranes from the blood vessels beneath them. A somewhat more elaborate process is that of the mucous membranes lining the respiratory and gastro-intestinal tracts. Thousands of cylindrical recesses, known as tubules, paved with secreting cells, empty their peculiar secretions upon every square inch of these surfaces. An isolated group of such tubules emptying by a single duct is called a simple gland; several of such groups having a common single duct constitute a compound gland; and the larger glands are simply multiplications of these groups, and serve to increase the amount of secreting surface within a given space. For a description of the manner in which cells are arranged in the various glandular structures, see GLANDS; KIDNEY; LIVER; MUCOUS MEMBRANES; etc. The characters of the various secretions, among which may be mentioned saliva, gastric juice, pancreatic juice, bile, ordinary mucus, sweat, tears, urine,

the products of the serous and synovial membranes and the sebaceous glands, are described under their own names or those of the organs which produce them.

SECRETION. The process in plants by which a substance is formed and expelled from a cell, or the substance which is so formed. The term is usually restricted to the formation of the many and diverse special materials, such as enzymes, resins, volatile oils, and sugars, which are of service to the plant. Secretions are either poured out upon the surface or into internal receptacles. See GLAND.

The formation of the secretion may be either direct or through the production of an intermediate substance. The details of the elaboration, however, are still obscure. For example, sugar is supposed to be formed directly, whereas enzymes are usually preceded by the production of minute granules of zymogen in the protoplasm. This distinction may mean only that in some cases visible products precede the final one, while in others they do not. There are two modes of separation of the secretion from the protoplasm. In the first the cell wall remains intact and the secretion is either expelled through the permeable parts of the wall, and appears first in its proper nature beneath the impermeable cuticle, which it lifts into a blister, or through these permeable parts into an intercellular receptacle. No satisfactory explanation of the process has been found. Such glands may secrete once only, or repeatedly, or continuously. In the second method the secretion results from the disorganization of the protoplasm which it eventually replaces. In multicellular glands the cell walls disappear and after one secretion the glands perish. If the secretion be soluble in water, e.g. sugar, as in many nectaries, and by exposure to the air the solution becomes concentrated, its osmotic pressure (see OSMOSIS) may be so increased that it withdraws water from the cell. Nectar is thus kept fluid and ready for the insects which it attracts.

SECRET SERVICE. The name given to that department of a government whose business it is to detect crime and fraud, obtain information of various kinds, and render various services of a secret nature. Its duties are generally not defined, and vary with the necessities of the occasion which may create them. In the United States the service is not centralized as it is under most foreign governments, and each executive department employs men to detect specific classes of offenders against the laws. The name has come to be generally applied to the Secret Service Division of the Treasury Department, organized in 1864 and charged chiefly with the detection and arrest of counterfeiters, the whole country being divided into 27 secret service districts. Operatives from the division, however, are frequently detailed to work in connection with other departments than the Treasury Department. Thus during the Spanish American War secret service operatives rendered effective services in breaking up the Spanish secret service organization in the United States. The Treasury Department also employs men to detect infractions of revenue laws and bring offenders to justice. The War Department employs men to obtain information of various kinds, and within the Post Office Department there is an efficient division of

of the Capitoline and Mars Depedations, or *ludi saeculares*.

SECTION (Lat. *sectio*, from *seco*, to cut). In geometry, the delineation of buildings on a vertical plane through any part of them—as a *plan* is the horizontal projection.

SECTOR (Lat. *sector*, cutter, from *seco*, to cut). An instrument used in mathematical drawing and calculations, which consists of two strips of wood, ivory, or metal jointed together like a carpenter's foot rule. The centre of the joint must always be the vertex of the angle whose sides are formed by the inner edges and any of the corresponding pairs of lines drawn from the joint obliquely along the rule. These oblique lines are graduated in different ways, so as to give, on each limb, a line of equal parts, a scale of chords, scales of sines, tangents, and secants, a line of polygons, etc. (all of which are graduated from the centre of the hinge, which is their zero point), besides a number of common scales on the blank portions of the sector. The special use of this instrument is in the finding of a fourth proportional to three given quantities. This instrument becomes more inaccurate as the angle formed by the limbs increases. The sector is said to have been invented by Guido Ubaldo about 1568, though Gasper Mordente of Antwerp describes it in 1584, and attributes its invention to his brother Fabriens in 1554. It was described by several German and English writers in the same century, and again by Galileo, who claimed to have invented it in 1604.

SECTOR. In geometry, a portion of a circle (q.v.) included between two radii and the intercepted arc of the circumference. Its area is expressed by one-half of the product of the length of the arc and the radius of the circle.

SECULAR GAMES (Lat. *ludi saeculares*). Roman games deriving their name from the theory that their performance marked the close of a *saeculum*, or period of extreme duration of human life. This was reckoned as 100 years, or, after the time of Augustus, 110. These celebrations were usually instituted as purifications or to check some evil, the belief being that with the declaration of a new age a limit was set which the evil could not pass. The earliest celebration of which we hear occurred during the great plague of B.C. 463, and at this time the ceremony consisted in driving a nail in the wall of the Temple of Jupiter on the Capitol, apparently to symbolize the securing and destruction of the plague. This was repeated in the years 363 and 263. Soon after this the distress of the First Punic War led to the consultation of the Sibylline Books, and in B.C. 249 a new *saeculum* began with the performance of *ludi Tarentini* at a spot in the Campus Martius called Tarentum. The celebration occupied three nights and on each a black bull and a black cow were offered at a subterranean altar, uncovered for the occasion, to Dis Pater and Proserpina, the Greek gods of the Lower World, whose worship was thus introduced to Rome. It obviously is essentially a funeral ceremony for the age that is past. The rite was repeated in B.C. 146, but the civil wars seem to have prevented the next repetition, and in B.C. 17 Augustus celebrated new and splendid *ludi saeculares*, which marked the opening of a new era, and which are known to us from the official record discovered in 1891. The 11 nocturnal offerings were continued

at the old altar, but the deities honored were now the Fates, Eileithyia, helper in childbirth, and the Earth. Three days were also given up to splendid processions and offerings in honor of Jupiter Optimus Maximus, Juno Regina, and Apollo and Artemis of the Palatine. On the third day the procession moved from the Palatine to the Capitol and back, led by a chorus of 27 youths and as many maidens, who sang the *Carmen Saeculare* of Horace. These games were repeated in A.D. 88 by Domitian, and in A.D. 204 by Septimius Severus. Another series in celebration of the foundation of the city was begun A.D. 47 (800 A.D.C.), and repeated in 147 and 248. Consult: Wissowa, "Religion und Kultus der Römer," in Müller's *Handbuch der Klassischen Altertumswissenschaft* (Munich, 1902); and *Die Säcularfeier des Augustus* (Marburg, 1894).

SECULARISM (from *secular*, from Lat. *secularis*, *saecularis*, relating to an age or period, worldly, from *saeculum*, *saeculum*, age, period, world). The term applied to a system of ethical and social principles first advocated about 1846 by G. J. Holyoake. As its name implies, it concentrates its attention upon the present life, neither denying nor affirming the existence of another. It inculcates an ethics not dependent in any way on religion, although it does not formally deny the truth of any religion. It is, in fact, utilitarianism cut loose from all connection with theology. A society was formed in London, of which Holyoake was president, but in 1858 Charles Bradlaugh (q.v.) succeeded him and under his administration the society carried on a political propaganda, advocating disestablishment and disendowment of the Church of England, abolition of the House of Lords, and many economic changes. Consult Holyoake, *Principles of Secularism* (London, 1855).

SECULAR VARIATION. See MAGNETISM, TERRESTRIAL.

SECUNDERABAD, sé-kūn'dér-á-bād'. A suburb and military cantonment of Hyderabad (q.v.), Nizam's Dominions, India.

SECUNDUS, JOANNES (1511-36). A Dutch poet, Jan Nicolai Everaerts by name. He was born at The Hague and was educated for the law in Bourges, but devoted himself to poetry, painting, and sculpture. In 1533 he went to Toledo as secretary to the Cardinal Archbishop Tavera. After his death was published *Basia*, a collection of Latin love poems distinguished by their classic beauty. His elegies, odes, epistles, and epigrams were collected in 1541 under the title of *Opera Poetica*.

SECURITY (Lat. *securitas*, freedom from care, from *securus*, free from care, from *se*, apart + *cura*, care, anxiety). Instruments or property which, in contemplation of law, render the enjoyment or enforcement of a right more secure. A *personal security* is a promise or obligation, such as a negotiable instrument or a bond given by a debtor or by a third person, in addition to the original liability intended to be secured. Even when a debtor gives his own promissory note or check or bill of exchange for the debt, this new engagement is properly spoken of as a security, because his liability thereon is more easily proved than on the original debt. A *security on property* exists when the property is mortgaged or pledged to

secure a debt or liability, or when by a rule of law the creditor is entitled to hold the property until a particular liability to him is discharged.

Securities are ordinarily *specific*; but at times they are *shifting or floating*. An example of the latter class is afforded by a chattel mortgage on property thereafter to be acquired by the mortgagor, or by corporation debentures which are made a charge on the stock in trade and book debts of the corporation. As soon as the mortgagee or debenture holder takes possession of the property or institutes proper proceedings for the enforcement of his rights the security becomes specific. Securities may originate either in the agreement of parties, which is the more common case, or in a rule of law. The seller's lien is of the latter class. This has its origin in the law merchant (q.v.), which accords to the unpaid seller of goods the right, in certain cases, even after title has passed to the buyer, to retain possession until the price is paid.

Under State laws exempting 'public securities' from taxation it has been held that this term does not include the bonds of railroads and similar corporations, but is limited to securities issued under legislative sanction for the furtherance of public works.

Securities in judicial proceedings are of various kinds, but their purposes and form are generally regulated by statutes which should be examined in each jurisdiction. Consult: Jones, *A Treatise on the Law of Corporate Bonds and Mortgages* (Benton, 1830); Poor, *Handbook of Investment Securities* (New York, 1892); Hainer, *The Modern Law of Municipal Securities* (Indianapolis, 1898); Butteryworth, *Bankers' Advances on Mercantile Securities* (London, 1902).

SECURITY OF PERSON. One of the fundamental rights of persons recognized and enforced by the common law and now guaranteed by the United States Constitution and by the constitutions of most of the States. It comprises those personal rights and privileges and immunities which go to make up the Bill of Rights under the English Constitution and which became fundamental in the American colonies. Many of these are traceable to *Magna Charta*, and they were confirmed and their number added to by the Petition of Right (Charles I.), and by the Bill of Rights of the Revolution of 1688.

The following is an enumeration of the more important rights of personal security: That no one shall be required to answer for an infamous crime unless he shall have been charged with the commission of the crime by a presentment or indictment of the grand jury; that no person shall be liable for the same offense to be twice placed in jeopardy of life or limb; that one charged with the commission of a crime shall not be compelled to be a witness against himself; that he shall be entitled to trial by jury and at the trial that he shall be confronted with the witness against him; that he shall be entitled to have compulsory process to compel the attendance at the trial and the testimony of witnesses in his favor; that excessive bail shall not be required of him, and that cruel and unusual punishments shall not be imposed; that no bill of attainder or *ex post-facto* law shall be passed; and that no person shall be deprived of life, liberty, or property without due process of law.

For a fuller discussion of the subject, see CONSTITUTIONAL LAW; PRIVILEGE; MAGNA

CHARTA; PETITION OF RIGHTS; BILL OF RIGHTS; JEOPARDY, BILL OF; ATTAINDER; etc.

SEDAINE, se-dā'n', MICHEL JEAN (1719-97). A French dramatist, born in Paris, the son of an architect. Sedaine was early orphaned. He became a mason and builder, and in 1733 published poems of merit. Then he turned to the stage, attracted the notice of Diderot, and won general applause by the now classic *Le philosophe sans le savoir* (1765), and *La gigue improvée* (1768), natural and original bourgeois comedies which alone survive of his work. He became an Academician, and secretary for architecture in the division of fine arts, and died in Paris, prosperous, popular, and respected. His *Œuvres choisies* were published in three volumes in 1813.

SEDALIA, sē-dā'li-ā. The county seat of Pettis County, Mo., 188 miles west of Saint Louis, on the Missouri Pacific, the Missouri, Kansas and Texas, and the Sedalia, Warsaw and Southwestern railroads (Map: Missouri, C 3). It has an elevated site in a rolling prairie region, and is regularly laid out with beautifully shaded streets. Leading features are the George R. Smith College (colored), the Convent School of the Sisters of Saint Joseph, the Carnegie Public Library, the hospital of the Missouri, Kansas and Texas Railroad, and Liberty and Forest parks. The State fair is held in Sedalia. The city has important railroading and manufacturing interests. Shops of the Missouri Pacific and the Missouri, Kansas and Texas railroads are here; and there are also iron works, foundries, beef and pork packing establishments, breweries, flour and woolen mills, and manufactories of shoes, carriages, overalls, and hosiery. The government, under the revised charter of 1893, is vested in a mayor, elected biennially, and a unicameral council. Founded by Gen. G. R. Smith in 1861, Sedalia was used as a United States military station during the Civil War. It was captured and held for several days by a Confederate force in 1861. Sedalia was incorporated in 1864 and was chartered as a city in 1889. Population, in 1890, 14,068; in 1900, 15,231.

SEDAN, se-dā'n'. The capital of an arrondissement in the Department of Ardennes, France, 164 miles northeast of Paris, on the Meuse River (Map: France, M 2). It was formerly an important fortified town, and the scene, in 1870, of the disastrous defeat and capitulation of the French army of MacMahon. (See SEDAN, BATTLE OF.) The fortifications have been demolished and Sedan at present is mainly a residential and industrial town. The chief buildings are the parish church, the college, and the museum, and there are interesting remains of the fifteenth century castle. The town is noted for its manufactures of cloth, introduced by Colbert in 1646, and there are also considerable coal and iron mining interests in the vicinity. Sedan chairs are said to have been first made here. Population, in 1901, 19,349.

SEDAN, BATTLE OF. In the latter part of August, 1870, Marshal MacMahon set out from Châlons for the purpose of effecting the relief of Metz, where Bazaine (q.v.) had been locked up by the German forces, after the series of engagements terminating with the battle of Gravelotte (q.v.). The third and fourth German armies, by forced marches, succeeded in barring to MacMa-

of the French army, and pressed the French back to the Belgian frontier, which it was the German plan to compel them to cross. M. M., on, however, after several days' fighting, as an alternative of throwing himself into the fortress of Sedan, and occupied the heights which surrounded the fortress on the north, east, and west. The Germans now proceeded to encircle the French forces, whom they outnumbered two to one. The battle began early in the morning of the first of September. While the Württemberg troops were assigned to hold the line of French retreat to Mézières, the Bavarians, Prussians, and Saxons, with the Guard, delivered an attack along the entire French line. MacMahon was wounded in the first hours of fighting, and to the conflict of authority between Generals Ducrot and Wimpffen was due no little of the confusion which followed. The most desperate fighting occurred at the village of Bazeilles, to the east of Sedan. In the late afternoon the French had been driven from their positions, and the Germans had planted on the heights around Sedan a circle of 500 cannon, under whose fire the enemy was helpless. The French were driven back on Sedan, and at four o'clock the bombardment of the town began. The futility of resistance was apparent, and by order of the Emperor Napoleon III., who was present in Sedan, a flag of truce was raised. On September 2d General Wimpffen arranged with Bismarck and Moltke the terms of capitulation. Nearly 2,900 officers and 83,000 men laid down their arms and were made prisoners, with the Emperor. The French loss in battle was 17,000 dead and wounded and 21,000 prisoners. Three thousand men succeeded in escaping into Belgium. The German loss comprised 470 officers and 8,500 men killed and wounded. In Paris the news of the capitulation of Sedan led to the overthrow of the Second Empire.

SEDATIVES (OF, *sedatif*, Fr. *sedatif*, from Lat. *sedare*, to calm, causative of *sedere*, to sit). Agents which exert a quieting influence upon the system or any part of it either by diminishing pain or excitability or by lessening functional activity. Sedatives may have a general or local action. General sedatives include chloroform, ether, and the hypnotics, (q.v.), such as chloral. Local sedatives are cold, heat, cocaine, opium, aconite, etc. Typical respiratory sedatives are dilute hydrocyanic acid, squills, ipecac, and veratrine. Digitalis, aconite, and tobacco are circulatory sedatives. Among the drugs which have a soothing effect upon the nerves and spinal centres are potassium and sodium bromides, gelsemium, and physostigmine. Stomachic sedatives comprise sodium bicarbonate, bismuth, and nitrate of silver. Certain drugs are sedative to one organ or system and irritant to another, or they may be sedative in minute doses and irritant in large; any classification, therefore, is apt to be misleading. See also NARCOTICS; HYPNOTICS; ANAESTHETICS.

SED'DON, JAMES ALEXANDER (1815-80). An American jurist and politician, born at Falmouth, Stafford County, Va. He studied law at the University of Virginia, and began practice in Richmond. In February, 1861, he was a delegate to the Peace Convention held in Washington, and presented a minority report recommending the adoption of amendments to the Consti-

tution suggested by J. J. Crittenden, which tolerated slavery in the Territories, and specifically recognized the right of peaceable secession. He was a member of the First Confederate Congress, and on November 21, 1862, was appointed Secretary of War by President Davis. On the expression by the Virginia Congressmen of a want of confidence in the Cabinet, he resigned in February, 1865. He then retired to his plantation in Goodland County, and lived quietly until his death.

SEEDGE/MOOR. A barren tract of land in Somersetshire, England, between King's Weston and Bridgewater, 5 miles southeast of the latter place. It is noted as the battlefield where the Duke of Monmouth (q.v.) was defeated by the troops of James II., commanded by the Earl of Faversham, in 1685.

SEDGLEY, sēj'li. A manufacturing town in Staffordshire, England, suburban to Wolverhampton. Population, in 1901, 15,951.

SEDG'WICK, ADAM (1785-1873). An English geologist, born in Yorkshire. He was educated at Trinity College, Cambridge, and in 1818 became Woodwardian professor of geology in that university. In studying the rock formations of North Wales he developed a new stratigraphical group to which he gave the name Cambrian, and which is still recognized in geological nomenclature. With Murchison (q.v.) he established also the Devonian system and showed its extensive development in Europe. Besides numerous papers to scientific journals, he wrote: *Discourse of the Studies of the University of Cambridge* (1850); and *A Synopsis of the Classification of the Palaeozoic Rocks* (1855). For an estimate of Sedgwick's scientific work, consult Geikie, *The Founders of Geology* (London, 1897).

SEDGWICK, CATHERINE MARIA (1789-1867). An American author, born in Stockbridge, Mass., and daughter of Judge Theodore Sedgwick. She opened a school for young ladies (1813), and continued it for fifty years. In 1822, with the encouragement of her brother, Theodore Sedgwick, she published *A New England Tale*, which was popular, and followed it in 1824 with *Redwood*. Then came a succession of novels, including the good colonial romance *Hope Leslie* (1827) and culminating in *The Linwoods* (1835), her last and best novel. The series of novels was succeeded by one of popular stories, illustrating morals and domestic economy. Her later work included *Letters from Abroad to Kindred at Home* (1841), the result of a European trip, and other moral books. Although now little read, she was an important force in early American culture. Consult *Life and Letters*, by Mary E. Dewey (1871).

SEDGWICK, DANIEL (1814-79). An English hymnologist. He was born in London, and was first a shoemaker, then a second-hand bookseller, and came to have many customers among collectors of theological literature. In 1859 he began to reprint rare hymns in his *Library of Spiritual Song*, and, continuing to study the subject, he became a recognized authority in hymnology. His knowledge was wide and minute, but he was hampered in making use of it by lack of education. He was much consulted by compilers of hymn books, and Julian's *Dictionary of Hymnology* owes much to his manuscripts.

SEDGWICK, JOHN (1813-64). An American soldier, born at Cornwall, Conn. He graduated at West Point in 1837, saw active service in the second Seminole War, served with distinction in the Mexican War, and received the brevets of captain and major. On August 25, 1861, soon after the outbreak of the Civil War, he was promoted from lieutenant-colonel to colonel, and six days later received the command of a brigade. He served with great efficiency, as a division commander, in the Peninsular campaign, and at Antietam was twice wounded, but remained upon the field, in order to inspire his troops, for two hours after receiving the second wound. In December, 1862, he was appointed a major-general, and in February, 1863, was placed in command of the Sixth Army Corps. In Hooker's Chancellorsville campaign he captured Marye's Heights, near Fredericksburg, and after Hooker's defeat displayed great skill in withdrawing across the Rappahannock. When Lee invaded Pennsylvania, Sedgwick, by a remarkable forced march, succeeded in getting to the field of Gettysburg in time to take an important part in the last two days of the battle. In the following November he succeeded by a skillful manœuvre in capturing at the Rapidan 1500 men of General Early's division, with several cannon and battle flags. He took part under General Grant in the battles of the Wilderness, but was killed on May 9, 1864, while superintending the planting of some guns in an advanced position at Spottsylvania. A monument made from the metal of cannon captured by his corps was erected in his honor at West Point in 1868.

SEDGWICK, ROBERT (c.1590-1656). An American colonist, born in Woburn, Bedfordshire, England. He settled at Charlestown, Mass., in 1635, where he became a successful merchant, and for many years represented that town in the General Court. He was active in organizing the Ancient and Honorable Artillery Company, of which he became captain in 1640. In 1652 he was appointed commander of all the Massachusetts militia. With John Wintthrop, Jr., and other colonists he established in 1643-44 the first iron works in the United States. Under authority from Cromwell, he drove the French from the Penobscot region in 1654, and in 1655 accompanied the expedition which captured Jamaica. Just before his death there Cromwell promoted him major-general and gave him sole command.

SEDGWICK, THEODORE (1747-1818). An American jurist, born in Hartford, Conn. He attended Yale College, but left in 1765 without graduating. In the following year he was admitted to the bar, and practiced in Great Barrington in Massachusetts, and then in Sheffield. One of his most famous cases was that of Elizabeth Freeman, an escaped slave. The trial took place about the year 1781, and the court gave the woman her freedom on the ground that slavery was incompatible with the Massachusetts Bill of Rights. In 1776-77 Sedgwick served in the expedition against Canada as an aide to Gen. John Thomas; was later several times a member of the Massachusetts Legislature, and in 1785-86 was a member of the Continental Congress. In the following year he assisted in putting down Shays's Rebellion; in 1788 was Speaker of the Massachusetts House, and in the same year was a member of the Convention

that ratified the Federal Constitution. From 1789 until 1801 he was a member of Congress, and for brief periods was Speaker of the House and president of the Senate. From 1802 until his death he was judge of the Massachusetts Supreme Court.

SEDGWICK, THOMPSON (1811-59). An American law writer, born in Albany, N. Y. After graduating at Columbia College (1829) he was attached to the United States legation at Paris in 1833-34. In 1858 he became United States District Attorney. His writings include a *Treatise on the Measure of Damages* (1847; 8th ed. 1891), a work of much importance, and his edition of the political writings of William Leggett (2 vols., 1840).

SEDGWICK, WILLIAM THOMPSON (1855-). An American biologist, born in West Hartford, Conn., and educated at Sheffield Scientific School, Yale (1877), and at Johns Hopkins University, where from 1880 to 1883 he taught biology. In 1883 he became professor of biology in the Massachusetts Institute of Technology. Sedgwick was biologist to the State Board of Health of Massachusetts from 1888 to 1896. He collaborated on a *General Biology* (1886) and published *Principles of Sanitary Science* (1902).

SEDILLOT, se d'ÿlô', LOUIS PIERRE EUGÈNE AMÉLIE (1808-75). A French Orientalist, born in Paris. He was successively professor at various colleges, and in 1832 became secretary of the Collège de France, but was chiefly occupied in the study of science among the Orientals. His numerous monographs include: *Lettres sur quelques points de l'Astronomie orientale* (1834); *Manuel de chronologie universelle* (1834; 2d ed. 1850); *Mémoires sur les systèmes géographiques des Grecs et des Arabes* (1842); *Matériaux pour servir à l'histoire comparée des sciences mathématiques chez les Grecs et les Orientaux* (1845-49); and *Histoire des Arabes* (1851).

SEDIMENTARY ROCKS (from *sediment*, Lat. *sedimentum*, subsidence, settling, from *sedere*, to sit). One of the main petrographic divisions, comprising all those rocks that are of secondary origin and have accumulated by the action of water or of the wind. See AQUICIOUS ROCKS; EOLIAN ACCUMULATIONS.

SEDITION (Lat. *seditio*, from *sed*, apart + *ire*, to go). Conduct against the State or its authority tending toward treason, but lacking the overt act, which is regarded as essential part of the greater offense; the writing, publishing, or uttering words which tend to excite subjects or citizens to insurrection or otherwise to disturb the tranquillity of the State, but which do not amount to treason. See TREASON.

SEDITION LAWS. See ALIEN AND SEDITION ACTS.

SEDLEY, AMELIA. A gentle sentimental girl in Thackeray's *Vanity Fair*. She married Captain George Osborne, and after his death at Waterloo Colonel Dobbin.

SEDLEY, SIR CHARLES (1639-1701). An English dramatic poet. He was born at Aylesford, Kent, and was the posthumous son of Sir John Sedley, from whom he inherited his title. He was educated at Wadham College, Oxford, became a member of Parliament after the Restoration, and stood high in the favor of Charles II. As a young man he was of dissolute habits,

was also under the ban of the law for his unbecoming and indecent behavior. He supported the banishment and opposed James II, on account of the latter's intrigue with his daughter, whom he afterwards made Countess of Dorchester. He was immortalized by his contemporaries for his wit, humor, and dramatic works, the chief of which are: *The Mulberry Garden*, a comedy (1668); *Titus and Cleopatra*, a tragedy (1677); *Belle-isle, or The Mistress*, a comedy (1687); *Beauty by Conquest, or The Death of Mark Antony*, a tragedy (1702); *The Grumbler*, a comedy (1702); and *The Tyrant King of Crete*, a tragedy (1702). Consult the *Memoir*, prefixed to his *Works* (London, 1778).

SEDUCTION (Lat. *seductio*, a leading astray, from *seducere*, to lead astray, from *se*, apart + *ducere*, to lead). In law, in its broadest sense, the deceiving or enticement of a servant away from his employment to his master's damage. By modern usage the term is generally, although not exclusively, applied to the persuasion of the servant to unlawful sexual intercourse with the seducer. Seduction by the common law was one of the numerous forms of tort for which the person injured might recover damage. The use of this form of action to recover for the loss of service of a servant, however, is now of infrequent occurrence. The action, however, is now important as affording a parent a means of recovery of damage from the seducer for unlawful intercourse with his daughter. For all practical purposes the effect of his action is to enable him to recover damage for the wrong done him as a parent, and the amount of his recovery is not limited to the actual financial loss. Historically and in legal contemplation, however, the parent's right to recover is based upon the loss of service of his daughter as a servant, and it seems not unlikely that originally the right to recover for seduction of a child did not differ in any particular from the right to recover for the enticement of a servant. To entitle the parent, therefore, to recover for the seduction of his daughter it was necessary for him to establish loss of the daughter's services as a consequence of the seduction. This is still the rule in England, but generally in the United States, by a relaxation of the rule, the parent may maintain the action if he has a legal right to the daughter's services during her minority, whether he is actually availing himself of them or not. This fact being established, however, he may recover not alone for loss of the daughter's services, but for the injury to his feelings and an additional amount as punitive damages.

In establishing loss of service or invasion of the parent's legal right to the daughter's services slight acts of service or a bare legal right to services will suffice. And whenever loss of such service or interference with the right follow as a direct result of the seduction, the seducer must respond in damages. At common law the person seduced had no right of action against the seducer, as the seduction was accomplished with the consent of the person seduced, and this was the rule even when the seduction was accomplished by fraud. In some States by statute the person seduced may maintain an action in her own right, although usually this may not be done unless a child is born as a consequence of the seduction, thus making the action analogous to a bastardy proceeding. Seduction was not a crime

by the common law. Most of the States of the United States now have statutes making seduction of a woman of previous chaste character a crime. Generally they are applicable only to the seduction of unmarried women under promise of marriage, and subsequent marriage is not infrequently made a bar to prosecution for this offense. Consult authorities referred to under **CRIMINAL LAW**.

SEDULIUS, CÆLIUS. A Christian poet of the fifth century. He wrote *Carmen Paschale*, an extant hexameter poem, in five books, on the history of the Old Testament; *Opus Paschale*, a prose version of the work, which is also extant; *Abecedarius*, an alphabetical hymn to Christ in 23 quatrains of iambic dimeters, remarkable for the partial employment of rhyme as a musical element; and *Veteris et Novi Testamenti Collatio*, a comparison of the Old and New Testaments in 55 couplets of elegiacs. The best editions are by Arevalus (1794) and Hulmer (1885). Consult: Hulmer, *De Sedulii Poeta Vita et Scriptis* (Vienna, 1878), and Leimbach, *Ueber den christlichen Dichter Sedulius* (Goslar, 1879).

SEE, HORACE (1835—). An American consulting engineer and naval architect, born in Philadelphia, Pa., where he was educated and after learning the machinist's trade became a mechanical engineer. In 1871 he entered the employ of William Cramp and Sons and in 1879 became their superintending engineer. He designed and in some cases supervised during manufacture and trial engines for the cruisers *Yorktown*, *Concord*, *Bennington*, *Philadelphia*, *Acarck*, and *Vesuvius*, the steamship *Monmouth*, and other steamships and private yachts. In 1889 he removed to New York City and opened an office as a consulting engineer and architect. More than any other one man, perhaps, he advanced the use of the double-compound, triple, and quadruple expansion engines. His device for the manufacture of perfect bearings and crank shafts did away with heating these parts before using the engine, and his hydro-pneumatic ashjector discharging the ashes direct from the fire-room outside the vessel above the water line did away with dirt and noise and relieved the firemen of considerable work. He also introduced many improvements in the hull, as well as machinery, of steam vessels.

SEE, JOHN (1845—). A Premier of New South Wales. He was born in Huntingdonshire, England, and went as a boy to Australia. In 1880 he entered Parliament as a member from Grafton and afterwards occupied successively the offices of Postmaster-General for the Colony, Colonial Treasurer (1891-94), Minister of Defense (1899-1901), and Colonial Secretary and Premier, which post he assumed in 1902.

SEE, THOMAS JEFFERSON JACKSON (1866—). An American astronomer, born near Montgomery City, Mo. He was educated at the universities of Missouri and Berlin, receiving his doctor's degree at the latter institution (1892) and presenting as inaugural dissertation a research of striking merit into the origin of binary stars. In 1893-96 he assisted in the organization of the Yerkes Observatory. In 1896 he became astronomer at the Lowell Observatory, and in 1899 professor of mathematics in the United States Navy. While at the Lowell Observatory, he ex-

amed about 200,000 fixed stars between 15° and 65° south declination, leading to the discovery of about 600 new double stars and remeasurement of about 1400. He has also made observations on the motions of satellites and diameters of the planets, measured parallax, and computed orbits of double stars. See is a fellow of the Royal Astronomical Society and member of several learned scientific societies. He wrote *Die Entwickelung der Doppelstern-Systeme* (1893), and *Researches on the Evolution of the Stellar Systems* (1896); he has also published double-star catalogues and contributed to various scientific journals.

SEEBACH, zē'bāc, MARIE (1834-97). A German actress. She was born at Riga, the daughter of an actor, and studied at Cologne for the opera. Having come to Hamburg in 1852, she made a great success as Gretchen in Goethe's *Faust*, and in other rôles, till in 1854 she went to Vienna. In 1856-65 she was engaged at the Court Theatre in Hanover and in 1866 removed to Berlin with her husband, Albert Niemann, whom she had married in 1859, but from whom she separated in 1868. Henceforth she confined herself to starring tours until 1887, when she accepted an engagement at the Royal Theatre in Berlin. Her principal rôles besides Gretchen were Klärchen in *Eqmont*, Louise in *Kathol and Liebe*, Julia, Ophelia, Desdemona, and Jane Eyre, and later Maria Stuart, the nurse in *Roméo and Juliet*, and Lady Macbeth. In 1871 she visited the United States. In 1893 she endowed a home for needy actors, which was established at Weimar as Marie-Seebach-Stiftung in 1895.

SEEBOHM, sē'bōm, FREDERIC (1833-). A British economic historian, born at Bradford. He was educated for the law, becoming a barrister, Middle Temple, in 1856. His *English Village Community*, published in 1883, at once placed him in the foremost rank of economic historians. Before the publication of that work the prevailing view was that primitive Anglo-Saxon society consisted of communal groups of free men holding land in common (the mark), and that by the continual aggression of native and foreign leaders the village community had degenerated into the manor, in which the tenants, originally free, became serfs. Seebohm attempted to show that there is no satisfactory ground for believing that the free community ever existed in England. The similarity of the Roman villa and the manor is emphasized, the implication being that the mediæval manor is to be explained as an amalgamation of the Roman villa with the Germanic tribal system. Seebohm published two works dealing with early tribal relations, *Tribal Custom in Anglo-Saxon Law* (1902) and *The Tribal System in Wales* (1895). His other works are: *Oxford Reformers*, John Colet, Erasmus, and Thomas More (1867; 3d revised ed. 1887); *On International Reform* (1871); *Era of the Protestant Revolution* (1874).

SEED (AS, *sād*, OHG, *sāt*, Ger, *Saat*, seed, Goth, *manasēps*, mankind, from AS, *sāwan*, Goth, *saiwān*, OHG, *sājan*, *sāren*, *sāen*, Ger, *sāen*, to sow; connected with Lat, *severe*, Ochurch Slav, *sētī*, Lith, *seti*, Lett, *sēt*, to sow). A reproductive structure characteristic of the highest group of plants (seed-plants). All flowering plants produce seeds, but not all that produce seeds have flowers.

A seed is an ovule (q.v.) transformed by the changes following fertilization. The integuments of the ovule give rise to the hard, impervious covering (testa), which often furnishes characters by which species and genera may be recognized. In many cases it also gives rise to appendages, such as wings (trumpet creeper), and silky hair (milkweed), which evidently aid in wind distribution. In others long threads (spinelike) are discharged from short hairs when the seeds are wetted. While the testa usually develops as a hard, dry coat, it is sometimes berry-like (pony), or even like a stony fruit (magnolia). There may also be appendages or outgrowths, as in the tumitory family, which have been called strophioles (at the base of the seed) and canules (at the apex). Sometimes an extra more or less incomplete seed-covering (aril) is developed, which is sometimes a membranous sac loosely inclosing the seed and open at the top (water lilies); but it is usually fleshy (yew, may apple, bitter sweet, etc.). One of the most peculiar arils is the so-called mace of the nutmeg.

Within the testa of a typical seed is a region (the micellus) often still more extensively modified. In its centre a large cavity (embryo-sac) occurs within which the embryo is found, imbedded in nutritive tissue (endosperm). The tissue of the micellus between the embryo-sac and the testa is called the perisperm, and supplements the nutritive supply of the endosperm. Examples of modification: The embryo-sac may enlarge and occupy the whole micellus region, the perisperm being absent and the embryo-sac abutting against the testa. Again, the embryo may absorb the endosperm and store its own body with nutritive material. In the mature bean seed both these phenomena occur, the testa containing only a large embryo gorged with food.

In an ordinary dicotyledonous embryo the seed contains three regions: (1) the hypocotyl, or small stem-like structure, which should not be confused with the later stem of the plant; (2) two cotyledons, or the seed leaves, usually very different in form from the later leaves; and (3) between the cotyledons, the plumule, a bud often very minute, which develops into stem and leaves. See EMBRYO.

Seeds contain various carbohydrate and proteid reserve foods, perhaps the most conspicuous among which in most seeds are starch (in cereals), oils (in castor bean), reserve cellulose (in the date). Proteid foods are also abundant; in some cereals they form a layer outside of the starch.

Many seeds, such as nuts, have no striking methods of dispersal, yet nut-bearing trees (e.g. oaks) are about as widely distributed as other trees. Many seeds, the so-called sling fruits, are scattered by mechanical expulsion, as touch-me-not (Impatiens). The commonest mechanical device for seed dispersal depends upon the desiccation and consequent rupture of the seed pod or capsule; in the Leguminosæ the pods twist and scatter the seeds. Many seeds are scattered by animals, either as so-called burrs, which become attached to animals, or as fleshy fruits which are eaten. Many seeds are distributed by wind. Some (elm, maple) have winged seeds; others have cottony or feathery appendages (dandelion, milkweed). Various tumble weeds (q.v.) may also be included in this group. In

very early seeds for great distances.
 (ATOPHYTES.)

SEED-EATER. A very small, variegated, brightly colored finch or grass-eater, genus *Sporophila*, several species of which are found in tropical America, feeding upon grass-seeds and the like, and are very common about gardens. One species, the *Sporophila Woodhewi*, extends north into Texas and is distinguished by having the head and fore parts mainly black. It nests near the ground and lays eggs of the colors shown in the Plate of EGGS of SOLE BIRDS.

SEED-PLANTS. The common name of the highest of the four great divisions of plants. See SPERMATOPHYTES.

SEED TESTING. The practice of determining the purity of seeds by visual examination and the viability by sprouting samples. The active crusade in seed testing may be said to have begun with Professor Nobbe, who established the first laboratory for testing seeds at Tharand, Saxony, in 1869, since when other laboratories have been established in most of the countries of Europe, and in some countries the quality of seed is a subject of governmental control. In the United States the seed-testing laboratories are in connection with the National Department of Agriculture and many of the State experiment stations. Legislation looking to seed control has been enacted by some of the States. The need for seed testing prior to sale is well shown by the repeated report of seed of low vitality, and often with admixtures of dead seed, sand, and weed seed. Many of the most troublesome weeds have been introduced in seeds purchased in good faith. Grass and clover seed are commonly mixed with similar seeds of less value. In countries where seed-control regulations exist samples of definite weight are sent to a testing laboratory where their value is determined and a certificate issued. Based upon this report, the dealer guarantees the quality of his seed. As the laboratory tests are generally made under the most favorable conditions, a certain amount of latitude is allowed, and certain penalties are exacted when the samples are inferior to the standard. This system appears to have given satisfaction where adopted, and the quality of seed in the market is much better than formerly. In testing for purity a definite portion is weighed out from an average sample and the whole carefully examined under a magnifying glass and all chaff, earth, etc., rejected. The weight of the remainder expressed in per cent, shows the purity. Of the pure seed a definite number—100 or 200—are germinated in specially devised apparatus. The sprouted seeds are counted every day and removed. This is continued from 10 to 30 days, dependent upon the kind of seed, some sprouting much faster than others. At the end of the period, which is fixed for every kind of seed, the number of sprouted seeds expressed decimally represents the percentage of viable seed. The per cent. of purity multiplied by the per cent. of germinations, divided by 100, will show the intrinsic value of the seed. This is the fairest method of estimating the quality of seed, since the grower is interested in the number of plants he can obtain from a given quantity of seed. If a certain sample of seed should give 90 per cent. purity and 90 per cent.

germination, its value, according to this method, would be 81 per cent. In the foreign seed laboratories fees are charged for testing and certifying to the quality of seeds. These are paid by the dealer and usually include a re-examination free of charge to the planter if he is not satisfied with the seed when purchased. To protect the dealer, a certain quantity of seed must be purchased, and other requirements are made to insure against substitution on the part of the consumer. In the United States, where little seed is sold under guaranty, the few laboratories do not make charges for inspection. Naturally seed that has been examined and certified to brings a higher price in the market, but unfortunately the overwhelming sentiment in America seems still in favor of cheap seed regardless of the quality.

For full descriptions of methods, etc., see *United States Department Agriculture Yearbook*, 1894, and subsequent volumes.

SEE'LAND. One of the Danish islands. See ZEALAND.

SEELEY, sē'li, HARRY GOVIER (1839—). An English geologist and paleontologist, born in London and educated at the Royal School of Mines and then at Sidney, Sussex College, Cambridge. He arranged the fossils in the Woodwardian Museum and became professor and lecturer in King's College and Queen's College, London, in 1876, and dean of the latter in 1881. His paleontological researches include the discovery of skeletons of the *Pareiasaurus* and of the *Cynognathus*. His works include: *Ornithosauria* (1870); *Physical Geology and Palaeontology* (1884); *The Fresh-water Fishes of Europe* (1886); *Factors in Life* (1887); and *Dragons of the Air* (1901).

SEELEY, JOHN ROBERT (1834-95). An English essayist and historian, born in London, educated at Christ's College, Cambridge. In 1863 he was appointed professor of Latin in University College, London, and in 1869 professor of modern history at Cambridge, a position which he retained till his death. His *Ecce Homo* (published anonymously in 1865), a plain account of Christ the man, excited great interest and called forth much discussion and many replies. It was supplemented by *Natural Religion* (1882). His valuable contributions to history comprise *The Life and Times of Stein* (1878); and *The Expansion of England* (1883). The importance of this work lies in its clear setting forth of the reasons of the long struggle (1688-1815) between France and England. He published *The Growth of British Policy* in 1895. Consult the memoir by Prothero prefaced to that work.

SEELIGER, zē'li-gēr, HUGO (1849—). A German astronomer, born at Biala, in Austrian Silesia, and educated in Heidelberg and at Leipzig, where he became assistant in the observatory in 1871. In 1881 he was appointed director of the Observatory of Gotha and in 1882 he received a like position and a chair in the university at Munich. He wrote: *Untersuchungen über die Bewegungsverhältnisse in dem dreifachen Sternsysteme ζ Cancri* (1881; 2d series, 1888; 3d series, 1894), *Zur Theorie der Beleuchtung der grossen Planeten, insbesondere des Saturns* (1887); and *Allgemeine Probleme der Mechanik des Himmels* (1892).

SEELYE, sē'li, JULIUS HAWLEY (1824-95). An American author and educator, born in Bethel, Conn. He graduated at Amherst College in 1849 and studied theology at Auburn Theological Seminary and at the University of Halle, Germany, after which he returned to America and was pastor of the First Reformed Church at Schenectady, N. Y., from 1853 to 1858, when he was elected professor of mental and moral philosophy at Amherst College. In 1874 he was elected as a result of a non-partisan movement a member of Congress, where, despite the fact that he was a Republican, he opposed the establishment of the Electoral Commission. From 1879 until 1890 he was president of Amherst College. His publications include: A translation of Schwegler's *History of Philosophy* (1856); *The Way, the Truth, the Life* (1873); translated into Hindustani, Japanese, and German; *Christian Missions* (1875); and a version of Hiecock's *Moral Science* (1880).

SEELYE, LAURENUS CLARK (1837—). An American clergyman and educator, born at Bethel, Conn. He was educated at Union College, at the Andover Theological Seminary, and at the universities of Berlin and Heidelberg. In 1863 he was ordained pastor of the North Congregational Church of Springfield, Mass. In 1873 he was elected the first president of Smith College (q.v.), which he organized and developed, and whose policy and curriculum he largely determined.

SEEMANN, zā'mān, BERTHOLD (1825-71). A German explorer and naturalist, born in Hanover. He was a member of the British expedition which sailed in the *Herbold*, and visited the West Indies, Central and South America, the Arctic, the Hawaiian Islands, and South Africa (1847-51). In 1852 he published *Narrative of the Voyage of the Herbold* (German, 2d ed. 1858). In 1860 he visited the Fiji Islands, and from 1864 to 1866 explored Venezuela and Central America. Among his numerous publications both in English and in German are: *Viti, Account of a Government Mission to the Vitian or Fijian Islands* (1862); *Die in Europa eingeführtem Akazien* (1852); *Die Volksnamen der amerikanischen Pflanzen* (1851); *Popular History of the Palms* (1855; German, 2d ed. 1863); and a *History of the Isthmus of Panama* (2d ed. 1867). In 1853 he founded the botanical periodical *Bonplandia*, which from 1864 to 1871 he continued in England as the *Journal of British and Foreign Botany*.

SEFFNER, zē'f'nēr, KARL (1861—). A German sculptor, born at Leipzig, where he studied at the academy in 1877-84, especially under Melchior zur Strassen (1832-96). After a short apprenticeship in Berlin he worked in Italy (1885-88) and settled at Leipzig, where he won a great reputation by his portrait busts and statues, full of animation and keenly characteristic. Besides the busts of Anton Springer, Karl Thierseh, and other scholars (1889-93, Leipzig University), there should be mentioned those of "King Albert and Queen Carola of Saxony" (Leipzig Museum), the bust of Wilhelm Scherer (Berlin University), and the monument to Karl von Hase (Jena). Of especial interest and merit are the monuments to Bach and Goethe (represented in his student years), at Leipzig.

SEGANTINI, sē'gān tē'nē, GIOVANNI (1858-99). An Italian figure and landscape painter, born at Aro, South Tyrol. His parents died when he was young and he became a herdsmen. Later he entered the Briera Academy at Milan, where he won prizes, at the same time gaining his livelihood by painting signs and advertisements. His "Ave Maria" won the gold medal of the Amsterdam Exhibition of 1883, but he failed to win the approbation of the Milanese public until the exhibition of his large canvas "The Alpine Pasture" (1895). Transcripts from the hard life of the peasant are "At the Close of Day" (1888), "The Watering Trough" (1889), "Plowing" (1896), and similar scenes showing a monotonous, trivial life overwhelmed by the cold, hard majesty of nature. Segantini towers above other Italian painters of the nineteenth century by reason of his originality and power. An intense realist, he saw the hard facts of existence through no softening medium. The atmosphere of his pictures is keen and crystalline; the objects stand out in sharp relief. A picture, "Sorrow Finding Comfort in Faith" (1896), marks the later development of his art when he sought for the expression of moral and mystical ideas. Of this type are "Punishment of Luxury" (Walker Gallery, Liverpool); "The Retribution of Unnatural Mothers," a subject taken from Hindu poetry; and a treatment of the virgin and the infant Jesus called "The Inspiration of an Alpine Flower." Consult the monograph by Ritter (Vienna, 1897).

SEGES'TA (Lat., from Gk. Ἐγέστα, *Egēsta*, Ἀγέστα, *Agēsta*). An ancient city in North-western Sicily, about six miles from its seaport, near the modern Castellamare. The town belonged to the Elymi, a tribe whom the Greek colonists found in the extreme west of the island, and whose ethnology is uncertain. Later tradition attributed the foundation to a band of fugitives from Troy, and in Roman times this was connected with the wanderings of Æneas. The coins seem to indicate some truth in the tradition of a Phœgian (less probably Phœcian) element in the population. The place was reckoned among the non-Hellenic cities, and was engaged in frequent strife with its Dorian neighbor, Selinus (q.v.). In the fifth century B.C. it sought Athenian support, and in B.C. 415 brought about the disastrous attack on Syracuse. In B.C. 409 it turned to Carthage for help, and thus led to the destruction of Selinus and the renewal of the long war between the Carthaginians and Greeks. It was besieged unsuccessfully by the elder Dionysius, but later must have left the Carthaginians, for it is called an ally of Agathocles in B.C. 306. On his return from Africa that tyrant demanded a huge contribution, and when refused charged the city with conspiracy and massacred with tortures a great part of the inhabitants. From that time the town seems to have lost its importance, though it was especially favored by the Romans. During the Saracenic wars the site was abandoned and is now only marked by a picturesque and well-preserved though unfinished Doric temple and a fine rock-cut theatre. Excavations have also brought to light a few remains of private houses.

SEGESVÁR, shē'gēs'h-vár. An Hungarian city. See SCHLÁSSBURG.

SEGHERS, *Seghers*, or **ZEGERS**, DANIEL (1591-1638). A renowned Flemish flower painter, born at Antwerp, where he studied under Jan van Eyck, entered the guild in 1614, embraced Catholicism and in 1614 joined the Order of the Jesuits. After his return from a sojourn in Rome he rapidly acquired great reputation and his pictures were in such demand that he could scarcely fulfill his numerous commissions, and royalties granted privileges to the Jesuits in order to secure works from his brush. He seldom painted flower pieces exclusively, but usually in collaboration with historical painters, surrounding their sacred subjects, most generally the Madonna, with a garland. In this way he cooperated with Rubens, Schut, Diepenbeek, and Quellinus. His flowers, sometimes highly finished, then again treated more decoratively, show admirable drawing, great truth to nature, and tasteful arrangement. The color of his red roses has remained unchanged to this day, while those of every other flower painter have turned or faded away altogether. Specimens of his art may be seen in nearly all the public galleries of Europe.

His brother GERARD (1591-1651), who usually signed his name *Zegers*, was an historical painter of considerable merit, born at Antwerp, where he studied under Van Balen and Abraham Janssens. In 1610 he went to Italy, partook of the manner of Caravaggio in Rome, and thence proceeded to Madrid, where he painted historical subjects and musical conversations for Philip III. After his return to Antwerp in 1620, allied in friendship with Rubens and Van Dyck, he worked much under their influence. The "Adoration of the Magi" (1630), in Notre Dame at Bruges, is considered his masterpiece.

SEGMENT (Lat. *segmentum*, piece cut off, from *scavo*, to cut; connected with OIG, *saga*, *sega*, Ger. *Säge*, AS. *saga*, Eng. *saw*). In geometry, a portion of a circle or of a sphere cut off by a secant line or plane. The former is called a *circular segment* and the latter a *spherical segment*. If the secant is a diameter of the circle or a diametral plane of the sphere, the segments are equal and are semicircles or hemispheres respectively; otherwise they are unequal and the lesser one is called the minor and the greater the major segment. The area of a circular segment in a circle of radius r , whose chord subtends a central angle θ , is $\frac{r^2(\theta - \sin \theta)}{2}$, θ being measured

in radians. For the volume of a spherical segment, see **MENSURATION**.

SEGNERI, sán-yá'ré. PAOLO (1624-94). An Italian Jesuit mission preacher. He was born at Nettuno, educated by the Jesuits in Rome, and joined the Society in 1637. He attained high rank as a preacher and appealed to the emotional southern temperament of his hearers by a highly dramatic manner. But his many sermons which have been preserved have intellectual qualities and justify his selection by Pope Innocent XII, as a preacher at the Papal Court. There is an edition of his sermons and other works in Italian (Milan, 1845-47), and his famous *Lenten Sermons*, *Panegyrics*, *Manna of the Soul*, and *Practices of Interior Recollection with God* have all been translated into English and published in London (1872-81). Consult his *Life* (London, 1851).

SE/GO. A fortified post of French West Africa. See **SEGU-SIKORO**.

SEGOVIA, sá-gó'vé-á, or **WANKS**. A river forming in the lower half of its course the boundary between Honduras and Nicaragua (Map: Central America, E 3). It rises in the mountains near the Gulf of Fonseca and flows northeast in a course of 400 miles, emptying into the Caribbean Sea at Cape Gracias á Dios. It is navigable for small river craft 170 miles from its delta, being then obstructed by rapids. The channels of the delta, however, are very shallow and the coast lagoon into which they discharge is silting up.

SEGOVIA. The capital of the Province of Segovia, in Old Castile, Spain. It is situated on the north slope of the Sierra de Guadarrama, 40 miles northwest of Madrid (Map: Spain, C 2). The old part of the town is built on an oblong, rocky hill with nearly precipitous sides, 330 feet high. It is surrounded by a wall with 86 towers, running along the brink of the hill, and, though dating from the eleventh and the twelfth centuries, in a good state of preservation. The northwestern corner of the hill is a narrow, precipitous promontory between the River Eresma and a small tributary, and on this is perched the famous Alcázar, an imposing castle built in the fourteenth century, where Isabella of Castile was crowned. It has two large towers crowned with bartizans, and formed an important part of the fortifications. Noteworthy are the numerous churches, including the old deserted monasteries, there are no less than 73 ecclesiastical buildings in this little town, and some of them, such as the cathedral, rank among the finest in Spain. The cathedral is a large Gothic basilica, begun in 1525, with two rows of chapels, flying buttresses, and a square tower, 345 feet high, crowned by a cupola. The San Estéban has a high Byzantine tower. The Roman aqueduct is the largest Roman monument extant in Spain. It crosses the valley between the mountains and the town in 119 arches, having for some distance another tier of arches above them. Some of the arches are 94 feet high. There are paper and flour mills, iron and lead foundries, and dyeing establishments. Population, in 1900, 14,658.

SEGUIDILLA, sá'gá-dé'lyá (Sp., little sequence, diminutive of *seguida*, succession, from *sequir*, from Lat. *sequi*, to follow). A national Spanish dance in $\frac{3}{4}$ time. Its characteristic is the rhythmic figure

which is played on castanets for four bars as an introduction. After every movement it is repeated for four bars. The music is usually played on a guitar with castanet accompaniment, and during the dance the musicians also sing. The seguidilla is danced by several couples, who arrange themselves in two parallel lines. After nine bars of music the dancers slowly change places, dance again, and return to their original positions. The third part of the seguidilla is suddenly interrupted on the ninth bar and the dancers remain motionless for a second in the exact postures held by them at the time.

SEGUIN, sá'gán', EDOUARD ONESIMUS (1812-80). A noted French-American physician, born at Clamecy, Nièvre, France, and educated in Paris at the colleges of Auxerre and Saint

Louis. From 1837 he devoted his life to the treatment of idiots. In 1884 the Academy of Sciences in Paris declared that to Seguin was due the credit of the solution of the problem of the care and education of idiots. After the revolution of 1848 Seguin came to the United States, and after a short sojourn at Cleveland, Ohio, he attached himself to the school for idiot children in South Boston and to the institution for feeble-minded youth in Barre, Mass. He assisted in the organization of an experimental school in Albany, N. Y., which later developed into the New York State Idiot Asylum at Syracuse. Seguin settled in Portsmouth, Ohio, in 1851, in the practice of medicine; but he frequently taught at institutions for idiots in Connecticut, Ohio, and New York, and at one time he was at the head of a Pennsylvania institution. After a sojourn of four years in Mount Vernon, N. Y., he removed to New York City in 1863, where in 1879 he established the Seguin Physiological School for Feeble-Minded Children. Among his works are: *Traitement moral, hygiène et éducation des idiots et des autres enfants arriérés* (1846); *Images graduées à l'usage des enfants arriérés et idiots* (1846); *Historical Notice of the Origin and Progress of the Treatment of Idiots* (trans. by Newberry, New York, 1852); *Idiocy and Its Treatment by the Physiological Method* (1886); *Wunderlich's Medical Thermometry*, with additions (New York, 1871). See IDIOCY; SEGUIN, EDWARD CONSTANT.

SEGUIN, sê-gwin', EDWARD CONSTANT (1843-98). An eminent American neurologist, born in Paris, France, and the son of Edouard O. Seguin (q.v.). Coming to the United States with his father, he settled in Cleveland, Ohio. He was educated at Mount Vernon, N. Y., at the College of Physicians and Surgeons, New York City, and under Brown-Séquard, Charcot, Cornil, and Ranvier in Paris, 1869-70. He was lecturer and later professor in the College of Physicians and Surgeons, New York City, 1871-85. He founded the clinic for nervous diseases in this college in 1873. Seguin was a founder of the New York Neurological Society and of the American Neurological Association. In advance of the appearance of Nothnagel he delivered masterly lectures on cortical localization, and in advance of Erb and of Charcot he described spastic spinal paralysis under the very unfortunate name 'tetanoid paraplegia.' He added much to the knowledge of medication in nerve diseases. His greatest achievement in therapeutics is probably his advocacy and introduction of very large doses of the iodides, called the 'American method.' To him we owe most of our knowledge of the use of aconitia, and of a large increase in the understanding of hyoscyamus, as well as of arsenic in its application in chorea. He was the editor of *The American Series of Clinical Lectures*. His articles on quinine used subcutaneously, the pathological anatomy of the nervous system, myelitis of the anterior horns, cortical localizations, the use of the bromides, paraplegia, neuralgia, electricity, potassium iodide, etc., were collected and published under the title *Opera Minora* (1884). See his biography and a sketch of his literary life in *Medical News*, lxxii., 312 and 582 (New York, 1898).

SÉGUR, sâ'gur'. A noble French family of Guienne. PHILIPPE HENRI, Marquis de Ségur-

Pouchat (1724-1801), served in the wars of Louis XV., and under Louis XVI. was Minister of War.

LOUIS PHILIPPE, Comte Ségur d'Agnessan (1753-1830), was born in Paris. He was one of the French officers under Rochambeau in the American Revolution. In 1783 he was sent as French Ambassador to Russia and became a great favorite of Catherine II. His public career during the Empire was respectable, but not brilliant. He died in Paris. He left many works, among which are: *La politique de tous les cabinets de l'Europe* (1793); *Tableau historique et politique de l'Europe de 1786-1796* (1800); *His-toire universelle* (1817); *Mémoires* (1825-26). His son, PHILIPPE PAUL, Comte de Ségur (1780-1873), was a general of the First Empire. He participated in various campaigns of Napoleon, and during the Russian campaign of 1812 was general of brigade. At the first Restoration he was given command of the cavalry, but after the second Restoration withdrew into private life until after the July Revolution. In 1831 he was made lieutenant-general and raised to the peerage. He wrote the valuable *Histoire de Napoléon et la grande armée pendant l'année 1812* (1824). Other works of his are: *Lettre sur la campagne du général Mandonad dans les Grisons* (1802); *Histoire de Russie et de Pierre le Grand* (1829); *Histoire de Charles VIII, roi de France* (1831).

SÉGUR, JOSEPH ALEXANDRE, Vicomte de (1756-1805). A French writer of comedy and libretto. He was born in Paris, was brought up for the army, and was Deputy of the nobility in the States General of 1789, but was ruined by the Revolution and was compelled to make a living by literary work. Several political brochures were followed by the *Correspondance secrète de Ninon de L'Enclos* (1790), which brought the author immediate popularity. *La femme jalouse* and *Le retour du marié* appeared soon after. Ségur wrote the French words for Haydn's *Creation*, produced at the Opéra. He published in 1795 an interesting account of his imprisonment during the Revolution: *Ma prison depuis le 23 Vendémiaire jusqu'au 19 Thermidor*. His last work, published in 1803 and very popular at the time, was entitled: *Les femmes, leurs coeurs, leurs passions, leur influence, et leur condition dans l'ordre moral*. His *Ouvrages divers* were published in 1819.

SEGURA, sê-gûr'â. A river of Southeastern Spain. It rises in the Sierra de Segura, in the Province of Jaen, and after an east-southeasterly course of about 150 miles enters the Mediterranean 19 miles southwest of Alicante (Map: Spain, D 3). The Segura supplies water to several canals in the Province of Alicante, so that, although it drains an extensive area, it is navigable only for small boats even at its mouth.

SE'GU-SIK'ORO, or Sego. A fortified post on the right bank of the Niger in the interior of French West Africa, about 670 miles east-southeast of Saint Louis (Map: Africa, D 3). It consists practically of a group of villages stretching along the Niger and containing a population of about 36,000.

SEHARUNPOOR, sê-hâr'un pûor'. A town of India. See SAHARANPUR.

SEIDL, zê'dl, ASTOR (1850-98). A musical conductor, born in Pesth. He was educated at

in 1870, and his graduation in 1871. He studied at the Vienna Opera. Hans Richter was his teacher, who engaged him to conduct the Ringing Trilogy, and in 1872 he was engaged until 1879. (See Wagner.) On recommendation Angelo Neureuther he was engaged as conductor for the itinerant series of Wagner operas (1879-83). In 1880 Seidl accepted an engagement in New York as conductor of the German opera. Then he soon developed the concert orchestra popularly known as the Seidl Orchestra. In 1892 the German opera was temporarily discontinued, but he again served as conductor during the New York seasons of 1895-96 and in 1897. In addition he was the conductor of the Philharmonic Society and of the Sunday night concerts. In 1897 he was engaged as one of the conductors at Covent Garden, London. By this time his reputation was such that his services were in demand in several of the leading musical centres of the world. In 1886 and 1897 he was one of the conductors at the Bayreuth Festival. He died in New York.

SEIDL, GABRIEL (1848—). A German architect, born in Munich, where he studied at the Academy under Neureuther, and after 1876 became favorably known through the erection of several buildings in the style of the German Renaissance, marked by refined elaboration of interior details. Besides the private residences of Leubach and F. A. Kaulbach, he built Saint Ann's Church, the Künstlerhaus and the new part of the National Museum.

SEIDL, JOHANN GABRIEL (1804-75). An Austrian poet, born in Vienna. He studied law and was called in 1840 to Vienna as custodian of the cabinet of coins and antiques in the Museum. He devoted his leisure to literature and became especially well known for his lyric and dialect poetry. His publications in this department include *Dichtungen* (1826-28), *Gedichte in nieder-österreichischer Mundart* (1844, 4 eds.), *Bifolien* (1855, 5 eds.), and *Natur und Herz* (1859, 3 eds.). Seidl is the author of the Austrian national hymn (1854) set to Haydn's music.

SEIDLITZ (södl'its) **POWDERS** (named from the town of *Seidlitz* or *Seidlitz*, in Bohemian Austria). Powders composed of 120 grains of tartrate of soda and potash and 40 grains of bicarbonate of soda reduced to powder, mixed, and inclosed in a blue paper, and 35 grains of powdered tartaric acid in a white paper. The contents of the blue paper are dissolved in half a tumbler of water, and those of the white in a half tumbler of water, and the two are poured together. The mixture should be taken while the effervescence from the liberation of the carbonic acid is still going on. These powders act as an agreeable and mild cooling aperient.

SEIGNIORAGE (ML. *senioraticum*, lordship, dominion, from Lat. *senior*, elder, lord, comp. of *senex*, old; connected with Gk. *ἔσος*, *ἕσος*, Skt. *śana*, Lith. *senus*, OIr. *sen*, Goth. *sincaus*, old). The excess of the nominal value of a coin over its bullion value at the moment of coining. Such excess may represent only the cost of coinage, for which the term *brassage*, used by French writers, has been proposed, but not generally adopted, or it may represent a profit to the State. Where free coinage exists any mint charge or seigniorage will act as a check upon

the readiness with which private persons bring bullion to the mint for coinage. On the other hand, such a seigniorage offers an inducement to the State to coin money freely. If it yields to the temptation it may gain an immediate advantage, but not without jeopardizing the security of its currency and running the risk of depreciating the value of its issues. Monetary legislation authorizing underweight coins usually limits the amount of such issues.

SEIGNIORY (ML. *senioria*, from Lat. *senior*, elder, lord). The domain of a seignior or feudal lord, and, in the strict sense, the ultimate unit in the feudal system. It was a local fragment of sovereignty annexed to property in land. The beginnings of the seigniorie are to be found in the late Roman Empire in the authority (*patrocinium*) which the great provincial magnates (*potentes*) exercised over the common people, especially the tillers of the soil. Among the German tribes which overthrew the West Roman Empire the germs of similar relations existed. The German noble had rights of protection (which implied control) over free followers, servants, and tenants who voluntarily 'commended' themselves to him and became his 'men.' In the Frankish Empire these Roman and German institutions were fused into the 'seniorate,' and the powers of the 'senior' were enlarged and consolidated by the development of the 'immunity.' Immunity, another institution which dates from the late Roman Empire, and which originally meant exemption from taxes and the baser services, was ultimately granted in the Carolingian period to all who held royal land as a 'benefice' or fief, and it came to include much of the power of local government. The grant of immunity excluded the regular officers of the Empire (the counts) from entry (*introitus*) into the immune district; it devolved upon the seignior the right and duty of raising and leading the armed forces of the district, of preserving the peace, and collecting fines from those who broke it; and it gave him jurisdiction in all 'minor cases' (*causæ minores*) over his followers, servants, and tenants. In criminal cases and in cases involving status the county court was still exclusively competent; but when one of the seignior's men was charged with a criminal offense it was customary to appeal first of all to the seignior, and if the complainant was satisfied by the seignior the case went no further. Thus there was developed in the seigniorie a seigniorial or manorial court, in which the seignior's *advocatus* (*vogt*) or bailiff presided and in which (usually) judgments were approved by the tenants. After the overthrow of the Frankish Empire the seigniors became petty monarchs of their seigniories, exercising nearly all the powers of the State. In the open country the free and previously independent inhabitants of the seigniorie were forced into subjection, and for the most part reduced to serfdom. In the towns, on the contrary, the authority of the seigniors was gradually extinguished and all the townsmen became free.

Toward the close of the Middle Ages, in consequence of the increase of royal power, the authority of the seigniors was gradually restricted. The military and taxing powers of the Crown were exercised directly within the seigniories. The rights which the seigniors retained were eco-

nomie rather than political; the political powers which they held longest were those of local police. These remnants of seigniorial authority were swept away by revolution or extinguished by legislation in the eighteenth and nineteenth centuries. For literature, see under FEUDALISM.

SEINE, sän. One of the principal rivers of France. It rises on the Plateau of Langres in the Department of Côte d'Or, and flows in a general northwest course of 472 miles, passing through the city of Paris and emptying into the English Channel through a wide estuary at Havre (Map: France, F 2). It falls very rapidly in its upper course, but below Paris its current becomes slow and its course marked by many windings. Its principal tributaries are the Marne and the Oise, both joining it from the north near Paris. The Seine is the most important commercial waterway of France, and considerable engineering works have been undertaken to facilitate its navigation, including a number of locks between Paris and Rouen. The river is navigable 337 miles to Méry, but from Marcellly, a little below Méry, a lateral canal follows its course to Troyes. Along the north shore of the estuary a ship canal 14 miles long leads from Tancarville into the harbor of Havre, while other canals connect the river through its tributaries with the Loire, the Rhone, the Rhine, the Meuse, and the Scheldt. The traffic passing through the river amounted in 1900 to 7,494,037 tons at Paris. Consult: Lavoigne, *La Seine maritime et son estuaire* (Paris, 1885); Barron, *La Seine* (ib., 1889.).

SEINE. The metropolitan department of France surrounded by the Department of Seine-et-Oise, and comprising the arrondissements of Paris, Saint-Denis, and Sceaux (Map: France, J 3). It is at once the smallest and the most populous department in the Republic. Its area is 185 square miles. Population, in 1896, 3,340,514; in 1901, 3,669,930.

SEINE-ET-MARNE, ä märn. A northern inland department of France (q.v.), bounded on the west by the Department of Seine-et-Oise (Map: France, J 3). Area, 2275 square miles. Population, in 1896, 359,044; in 1901, 358,325. The department derives its name from the two chief streams that water it, the Seine flowing through the southern and the Marne through the northern part. There are no mountains. Timber is grown in every part, and among the forests is that of Fontainebleau. The soil is generally fertile. Wheat is the principal cereal. Paving stone is quarried at Fontainebleau, and there are manufactures of flour and sugar. Capital, Melun.

SEINE-ET-OISE, ä wäz. A northern department of France, surrounding the metropolitan Department of Seine (q.v.) (Map: France, H 3). Area, 2184 square miles. Population, in 1896, 669,098; in 1901, 707,325. The chief rivers are the Seine and the Oise, which have numerous affluents. Oats is the principal cereal, and wheat, sugar beets, forage roots, elder apples, and vegetables are important. The industries include silk, wool, and flax spinning, hosiery making, flour milling, sugar refining, and the manufacture of iron and copper articles. There are several fine varieties of stone and clays. Porcelain is largely made at the famous Sèvres (q.v.) factories. Capital, Versailles.

SEINE-INFÉRIEURE, as fá reer'. A northern maritime department of France, bounded on the northwest by the English Channel, and on the south by the Department of Eure (Map: France, G 2). Area, 2448 square miles. Population, in 1896, 837,824, in 1901, 853,883. The Seine flows through the southern districts, and a number of important though small streams flow northwest across the department. Wheat, oats, sugar beets, colza, and cider apples are cultivated, and some cheese is made. There are cotton, wool, and flax manufactures; iron, copper, locomotive, and machinery works are among the industrial establishments. Capital, Rouen.

SE'IR (Heb. סַעִיר). A synonym for the land of Edom (e.g. Gen. xxxii, 3), and especially the name of the Edomite mountain land, Mount Seir (e.g. Deut. ii, 1). It is disputed whether the name is applied only to the mountains or also to the region west. In the patriarchal tradition, Esau, ancestor of the Edomites, is etymologically connected with Seir, he being described as a man 'of hair' (סַעִיר, Gen. xxi, 25; xxvii, 11). But in Gen. xxxvi, 20 sqq. Seir is the ancestor of the Horites (q.v.), the aboriginal inhabitants. In a papyrus of Ramses III, (c. c. 1300) the Seirites are mentioned as a Bedouin tribe. The name is therefore ancient and its etymology uncertain, whether it is to be derived from the people or from the land. In the latter case, just as Edom, 'red,' describes the prevailing color of these mountains, so Seir, 'hairy,' 'shaggy,' or perhaps 'awful,' may express the roughness of the country. This great mountain ridge, composed of argillaceous rock, porphyry, and sandstone, extends from the Dead Sea to the Gulf of Akabah on the Red Sea. It presents a precipitous front to the west and is broken by deep valleys, but the vegetation is rich and allows cultivation. Its most famous peak is Mount Hor, reputed scene of the death of Aaron, and its chief city the famous Petra (q.v.), in the neighborhood of which are to be seen some of the most remarkable and beautiful rock-formations in the world. The mountains were the home of a hardy race, which enriched itself through its command of the trade routes from Arabia to the Mediterranean, and which later spread north into Palestine. Consult: Robinson, *Biblical Researches* (vol. ii, Boston, 1841); Palmer, *Desert of the Erodus* (Cambridge, 1871); Trumbull, *Kadesh-Barnea* (New York, 1884). See EDOM.

SEISIN (OE. *seisne*, *saisin*, *saisin*, Fr. *saisine*, from OE. *seizan*, *saisian*, Fr. *saisir*, to seize, take possession of, probably from OHG. *sazzan*, *sezzen*, Ger. *setzen*, Eng. *set*, to put, place). Actual possession of land by a person entitled to it, or claiming to have a freehold interest therein. This is sometimes spoken of as *seisin in deed*, as distinguished from *seisin in law*, which is a mere right of present possession. By the old common law, *seisin* denoted the completion of feudal investiture of a tenant, accompanied by the rites of homage and fealty, after which he had the elements of a feudal title—possession and right of possession. This was done by a formal ceremony on the land, known as the 'livery of *seisin*' (q.v.). In most of the United States, delivery of a deed is equivalent to livery of *seisin*, and no formal entry on the land is necessary. However, the term *seisin* is still retained in our law, but there is some confusion as to its technical

ing a way line to be produced which indicates the tremors observed at the particular station. A clockwork arrangement opens and closes a shutter at regular intervals so that the light from the lamp makes a record of the time on the moving strip. Professor Milne in his observatory on the Isle of Wight using such an instrument is able to detect disturbances in Japan, Borneo, South America, or elsewhere, and the seismograms thus obtained, taken in connection with telegraphic information and interchange of observations at other stations, enable the velocity, wave movement, source, and other features of an earthquake to be studied.

SEISMOGRAPH (from Gk. *σεισμος*, *seismos*, earthquake, and *γραφειν*, *graphein*, to write), **SEISMOETER**, or **SEISMOSCOPE**. Names given to instruments designed to indicate and record an earthquake shock. By the term seismoscope is generally implied an object that is moved by the earthquake and leaves a record of its motion. The seismometer or seismograph, on the other hand, records the period, extent, and direction of the disturbance. A trough of mercury with notches makes a useful seismoscope, as the direction of the movement is indicated by noting the point where the mercury overflows.

Pendulums are also used as seismoscopes, and this form of apparatus has been rendered self-recording and forms seismometers or seismographs now in use. These pendulums consist of heavy masses delicately suspended so that they remain stationary during any vibration of the earth, and consequently can trace a record of the movement of the earth with respect to the pendulum. Two types of pendulum seismograph are used: those which employ a vertical pendulum, such as the Italian observers have used for many years, and those provided with a horizontal pendulum, a form preferred by the Japanese, English, and European scientists. The horizontal pendulum was invented by Hengler in 1832 and was subsequently improved and adapted to scientific use by Professor Zollner of Leipzig. In connection with the horizontal pendulum a recording device is used which in the instruments constructed during the last few years is photographic and employs a moving strip of bromide or other paper on which a beam of light is reflected by mirrors connected with the apparatus. In former instruments a blackened surface on which a point traced a line and other registering devices were used. In the bracket arrangement of the horizontal pendulum a heavy weight is supported at the extremity of a horizontal bracket free to turn about a vertical axis at the opposite end. Any movement of the earth affects the stand and surrounding objects, but is not communicated to the suspended mass. This instrument has been used in Japan in connection with a photographic register as described above, with considerable success. The horizontal pendulum of Professor Ernst von Rebeur Paschwitz of Mersburg is the form most used in Europe and has also been tested in Japan. In this apparatus there are one or two horizontal pendulums so that a vibration in any direction is recorded.

A simple horizontal pendulum seismograph which is now extensively used was devised by Professor John Milne of England. This instrument consists of a horizontal pendulum which carries a boom at whose extremity there is an aluminum plate in which there is a transverse slit. This slit is placed above and at right angles to a second slit beneath which there is a moving band of bromide paper. Light from a lamp is reflected through the intersection of these two slits in the form of a point when the two slits are in their position of rest, and makes a straight line on the moving paper. If there is any movement of the earth there is a movement of one slit with respect to the other, caus-

ing a wavy line to be produced which indicates the tremors observed at the particular station. A clockwork arrangement opens and closes a shutter at regular intervals so that the light from the lamp makes a record of the time on the moving strip. Professor Milne in his observatory on the Isle of Wight using such an instrument is able to detect disturbances in Japan, Borneo, South America, or elsewhere, and the seismograms thus obtained, taken in connection with telegraphic information and interchange of observations at other stations, enable the velocity, wave movement, source, and other features of an earthquake to be studied.

OMORI SEISMOGRAPH OF U. S. WEATHER BUREAU.

For further information on seismometers, the reader is referred to Milne, *Earthquakes and Other Earth Movements* (London and New York, 1886); miscellaneous papers on seismology in *Nature* (London), by the same author; Reports of the Committee on Seismological Investigations of the British Associations (to be found in the annual reports of the meetings of the association); and *The Seismological Journal of Japan*. See EARTHQUAKE.

SEISMOLOGY. See EARTHQUAKE.

SEISS, sēs, JOSEPH AUGUSTUS (1823-1904). An American Lutheran clergyman. He was born at Graceham, Md., and studied for two years at Pennsylvania College, Gettysburg. After a course of private instruction in theology, he became a pastor at Martinsburg and Shepherdstown, Va., in 1843, moved to Cumberland, then to Baltimore, Md., and in 1858 became pastor of Saint John's, Philadelphia. In 1874 he built and inaugurated the Church of the Holy Communion in that city. For twelve years he was editor of *The Lutheran* and for a time an editor of *The Prophetic Times*; also a founder of the General Council of the Church. Some of his books are: *Baptist System Examined* (1854; 3d ed. 1882); *Last Times* (1856; 7th ed. 1880); *Ecclesia Lutherana* (1867); *Lectures on the Gospels* (1876); *Luther and the Reformation* (1883).

SEISTAN, sās-tān', or **SISTAN**. A region in Eastern Persia and Southwestern Afghanistan, between latitudes 30° and 31° 35' N., and longitudes 60° and 62° 40' E. (Map: Persia, II 5). The Persian-Afghan boundary was determined

in 1870-72 by an English boundary commission, which gave Sistan proper (mostly west of the Helmund) to Persia, and outer Sistan (to the east and southeast of Sistan proper) to Afghanistan. The Persian district is mostly sandy, but well watered and productive. Outer Sistan is only sparsely inhabited. The inhabitants are Persians and Baluchis. The region abounds in relics of antiquity, and before the ravages of Tamerlane, in the fourteenth century, was one of the most important of the Persian provinces.

SEITZ, zits, ANTON (1829-1900). A German genre painter, born at Rotham Sand, near Nuremberg. He was especially successful with interior scenes on miniature scale, remarkable for delicate elaboration of the figures, fine chiaroscuro, and subtle humor, which earned him the name of the Munich Meissonier. A partial list of his principal works includes: "The Miser" (1860); "Dice-Players in a Tavern" (1862); "Rural Letter-Writer" (Germanic Museum, Nuremberg); "Vagabonds" (New Pinakothek, Munich); "Champion Shot" (1874, D. W. Powers, Rochester, N. Y.); "Capuchin Monk in Peasant's Cottage" (1883, Leipzig Museum); and "Political Declaration" (1891).

SE'JANT (OF, *scant*, from Lat. *sedens*, pres. part. of *sedere*, to sit), or ASSTS (Fr.). In heraldry (q.v.), a term of blazon applied to a beast represented as preparing for action.

SEJA'NUS, ELIUS (A.D. 31). A favorite and minister of the Emperor Tiberius (q.v.). Sejanus was born at Vulturni. His father was Sejus Strabo, commander of the praetorian guard under Augustus. When Sejus Strabo became governor of Egypt (A.D. 14) Elius was set over the praetorian cohorts, whom he united (A.D. 23) and with whose support he for a while held Rome in his sway. In order to make himself eventually Emperor, he persuaded Tiberius to withdraw to Capri. With Livia, wife of Tiberius, whom he had debauched, he plotted and brought about in A.D. 23 the death of Drusus Caesar (q.v.) and got rid of Agrippina (q.v.), wife of Germanicus, and her sons Nero and Drusus. Tiberius named Sejanus to be consul along with himself for the year 31 and then to be pontifex, but he became suspicious of Sejanus and had him killed with many of his suspected followers and his whole family. Our rather uncertain authority is Tacitus. Consult Jülg, *Vita Lucii Elii Sejani* (Innsbruck, 1882).

SELACHII, sê-lă'ki-i (Neo-Lat. nom. pl. from Gk. *σέλαχος*, *selachos*, shark). A group of fishes including the sharks and rays. See CARTILAGINOUS FISHES. For fossil forms, see SHARK.

SE'LAH. A rubrical note found in Hebrew psalms and prayers. It occurs as follows: In 39 Psalms, 71 times; in Habakkuk iii. (properly a psalm), 3 times; in the *Eighteen Benedictions*, one of the most ancient portions of the Jewish liturgy, twice; also with more or less authority in other prayers of the Jewish ritual. In the Septuagint it is represented by the term *diapsalma*; the Hebrew text is generally followed, but the term is sometimes omitted, sometimes supplied, where not found in the Hebrew. The Selah is also found twice in the Greek *Psalms of Solomon* (first century B.C., translated from a Hebrew original). In two-thirds of the cases in the Bible, it is found at the end of evident strophes.

VOL. XVII.—49.

four times at the end of the psalm; in most of the remaining cases, in connection with a quotation. In general, therefore, it indicates some natural break in the hymn. The most probable explanation is that advanced by Dr. C. A. Briggs, that the term is connected with a verb meaning 'to lift up,' in the sense of 'raising' a hallelujah, and that it was the rubrical direction for choric ologues, which are found at the end of the first four Books of the Psalms (xvi. 13; lxxv. 18-19; lxxxix. 52; cxi. 48), and which were used at the end of each psalm in the services. This view is supported by some of the Greek and Syriac renderings of the term, and by Jacob of Edessa and Jerome. Consult: Jacobi in *Zeitschrift für alttestamentliche Wissenschaft*, vol. xvi. (1896); C. A. Briggs in *Journal of Biblical Literature*, vol. xviii. (1899); E. C. Briggs in *American Journal of Semitic Languages*, vol. xvi. (1899).

SEL'BORNE, LORD. See PALMER, SIR ROXBELL.

SEL'BY. A river port in the West Riding of Yorkshire, England, on the Ouse, 20 miles east of Leeds (Map: England, E. 3). An ancient Gothic cross adorns the market place. The famous parish church, 306 feet long by 60 feet wide, was part of a Benedictine abbey founded by William the Conqueror in 1068. Population, in 1901, 7,890. Consult Morrell, *History of Selby* (Selby, 1867).

SEL'DEN, JOHN (1584-1654). An English jurist and Orientalist. He was born near Worthing, in Sussex, studied at Hart Hall, Oxford, and studied law at the Inner Temple. In 1610 appeared his *Janus Anglorum, Facies Altera* (English translation, 1633), which dealt with the progress of English law down to Henry II; and in 1614 was published his *Titles of Honour*. In 1623 he was elected member for Lancaster, and from this period till his death he took a considerable part in public affairs. In 1626 he took part in the impeachment of Buckingham; in 1627 he was counsel for Sir Edward Hampden in the celebrated Five Knights case; in 1628 he played an important rôle in drawing up and passing the Petition of Right, and for his participation in the tumultuous closing scene of the Parliament of 1629 was committed to the Tower for two years. In 1640 he was chosen member for the University of Oxford. After the execution of Charles I. (of which it is certain he strongly disapproved), he took little share in public matters. The principal writings of Selden deal with ancient Hebrew law and include: *De Successionibus in Bona Defuncti Secundum Leges Hebraeorum* (1634); *De Successione in Pontificatione Hebraeorum Libri Duo* (Leyden, 1638); *De Jure Naturali et Gentium Juxta Disciplina Hebraeorum* (1640). His *Mare Clausum* (published in 1635, though written sixteen or seventeen years before) was a reply to Grotius's *Mare Liberum*. He left besides a great variety of posthumous works, of which the most famous, and also the most valuable, is his *Table-Talk*, recorded and published by his amanuensis, Richard Milward, in 1689, and recently reprinted (London, 1868). Consult Johnson, *Memoirs of John Selden* (10 vols., London and New York, 1883-84).

SEL D'OR (Fr., salt of gold). A name given to sodium aurothiosulphate, which is used in photography. It was originally employed to aid

acid works. The element is somewhat widely distributed, though in small quantities. It occurs chiefly in combination with copper, lead, and silver, as in clausthalite (lead sulphide), lehrbachite (lead and mercury sulphide), onofrite (mercury selenide and sulphide), crookesite (copper, thallium, and silver selenide); also in smaller quantities in other minerals, especially in certain pyrites and chalcopyrites. It is obtained chiefly from the flue dust formed in roasting sulphides containing selenium, or from the deposits in the lead chambers of sulphuric acid works. These deposits are mixed with equal parts of sulphuric acid and water to a thin paste, and then boiled, with the addition, from time to time, of a little nitric acid, or potassium chlorate, until the red color disappears and the solution of selenic acid thus obtained is heated with fuming hydrochloric acid, yielding selenious acid, the cold solution of which, when saturated with sulphur dioxide, furnishes a red pulverulent precipitate of selenium.

SELENE, *selēne* (Lat., from Gk. Σελήνη, connected with *σελας*, *selas*, brightness, Skt. *svar*, Av. *hava*, sun). The Greek name of the moon and its goddess, called also *Μήνη*, *Menē*, and in Latin *Luna*. Her myth is differently told, but the most common account makes her a daughter of Hyperion and Thia, and sister of Helios (the sun) and Eos (the dawn). She was represented as riding in a chariot drawn by a span of horses, winged, and shedding soft light from her golden crown, or else riding on a horse or mule. Legend said that by Zeus she became mother of Pandora, 'the all-shining,' and that Pan had also won her love. Most famous was her passion for Endymion, who, according to the Carian legend, lay sunk in eternal sleep in a cave on Mount Latmos, where he was nightly visited by Selene. In Elis, however, the story told how she bore to Endymion, son of the King, fifty daughters. The sharply transparent character of the name seems to have kept Selene from developing into so distinct a personality as other early moon-goddesses. When Apollo became so strongly identified with the sun, it was natural that Artemis should be restored to her position as a moon-goddess, and in later literature and art we find the crescent an attribute of Artemis or Diana. Consult Roscher, *Ueber Selene und Artemides* (Leipzig, 1890), and *Vachtrage* (Leipzig, 1895).

SELENGA. A river of Northern Asia, rising in the Khangai Mountains of Mongolia. It flows for a considerable part of its course in a north-eastern direction, and after turning to the north, passes into the Siberian territory of Transbaikalia, and enters Lake Baikal through a wide delta (Map; China, B 2). Its total length is over 700 miles, and, although its swift current interferes to some extent with navigation, it is an important factor in the commercial intercourse between Mongolia and Siberia, flowing through the most settled part of Transbaikalia and touching the Trans-Siberian Railway. Its fisheries, which are exploited on a considerable scale, also add to the economic importance.

SELENITE (Lat. *selenites*, *selenitis*, from Gk. *σεληνίτης*, relating to the moon, from *σελήνη*, *selēnē*, moon). The variety of calcium sulphate, or gypsum, that is crystallized in the monoclinic system. It is usually white or tinged with light shades of green, gray, or yellow. Fine specimens are found at Bex, Switzerland; in Sicily; in England; also in Nova Scotia, and in the United States at various localities, in New York, Maryland, Ohio, and Kentucky. It sometimes occurs in broad transparent sheets as much as one yard across. In this condition the mineral is capable of being split into extremely thin plates that are flexible and were used by the ancients in place of glass.

SELENIUM (Neo-Lat., from Gk. *σελήνη*, *selēnē*, moon). A chemical element discovered in 1817 by Berzelius, who obtained it from crystals formed in the lead chambers of sulphuric

acid works. The element is somewhat widely distributed, though in small quantities. It occurs chiefly in combination with copper, lead, and silver, as in clausthalite (lead sulphide), lehrbachite (lead and mercury sulphide), onofrite (mercury selenide and sulphide), crookesite (copper, thallium, and silver selenide); also in smaller quantities in other minerals, especially in certain pyrites and chalcopyrites. It is obtained chiefly from the flue dust formed in roasting sulphides containing selenium, or from the deposits in the lead chambers of sulphuric acid works. These deposits are mixed with equal parts of sulphuric acid and water to a thin paste, and then boiled, with the addition, from time to time, of a little nitric acid, or potassium chlorate, until the red color disappears and the solution of selenic acid thus obtained is heated with fuming hydrochloric acid, yielding selenious acid, the cold solution of which, when saturated with sulphur dioxide, furnishes a red pulverulent precipitate of selenium.

Selenium (symbol Se; atomic weight, 79.17) exists in several allotropic forms, of which the red or amorphous variety, which is soluble in carbon disulphide, has a specific gravity of 4.3, and has no definite melting-point, but softens gradually on heating. When the soluble selenium is slowly heated from 100° C. to 217° C., it passes into a black, glossy, metallic crystalline mass, which has a specific gravity of 4.8, is insoluble in carbon disulphide, and melts at 217° C. Selenium is both odorless and tasteless, but it burns with a reddish-blue flame that has a peculiar odor resembling horseradish. The crystalline variety of the element conducts electricity, its resistance increasing when heated, but diminishing considerably on exposure to light, especially red rays. The change of conductivity is instantaneous, and is almost doubled in sunlight, though even the light from a small lamp has a perceptible influence. It was upon this property that the construction of the *photophone* (q.v.) was based. With oxygen selenium forms a dioxide, which combines with water to form selenious acid. A selenic acid is produced by the action of chlorine on aqueous selenious acid. Selenious and selenic acids form salts, termed, respectively, selenites and selenates.

SELENKA, *zâ-lôp'kâ*, EMIL (1842-1902). A German zoölogist, born in Brunswick, and educated there at the Collegium Carolinum and at the University of Göttingen, under Keferstein. In 1868 he was made professor of zoölogy and comparative anatomy at Leyden, and in 1884 he accepted a chair in Erlangen. His works dealt chiefly with comparative anatomy and embryology of the vertebrates, *Zoologische Studien* (1878-81), *Entwicklungsgeschichte der Tiere* (1883-92), *Zoologisches Taschenbuch* (3d ed., 1885), and *Menschenaffen* (1898-1902) being the chief titles.

SELEUCIA, *sê-lû'shî-á* (Lat., from Gk. Σελούκεια, *Seloukeia*). The name of a number of ancient cities of Asia, situated in Syria, Pisidia, Pamphylia, Cilicia, Caria, and Mesopotamia, founded during the earlier existence of the dynasty of the Selencidæ (q.v.). The most noted of these were: (1) SELEUCIA PIERIA (near the modern Snadciak), founded by Selencus Nicator at the foot of Mount Pieria, on the seashore, about 4 miles north of the mouth of the Orontes, and strongly fortified. It was the seaport of Antioch, and became of great importance during the wars between the Selencidæ and the Ptolemies for the

possession of Syria. Its once magnificent port is still in a good state of preservation, while the tunnel, 1088 yards in length, excavated out of solid rock, and forming the only communication between the city and the sea, together with the remains of its triple line of walls, its citadel, temples, amphitheatre, and necropolis, attest the former importance and splendor of the city. Seleucus himself was buried there. In B.C. 246 the city was taken by Ptolemy Evergetes, but Antiochus the Great recaptured it in 219. In 108 it gained independence, which Pompey confirmed in 70. By the fifth century A.D. it had entirely decayed. (2) SELEUCIA AD TIGRIM was also built by Seleucus Nicator on the west bank of the Tigris, about 40 miles northeast of Babylon, which was despoiled to supply materials for the construction of the new city. Situated in a district of great fertility, and controlling the navigation of the Tigris and Euphrates, as well as the commerce of Mesopotamia, it rapidly rose to wealth and splendor, supplanting Babylon as the capital of the eastern portion of the Seleucid monarchy, and containing in the acme of its greatness a population of more than 600,000. During the decline of the Seleucid monarchy it became independent, and attracted, because of its wealth and splendor, the robber tribes of Southern Armenia and Media, who partially plundered it on more than one occasion. It was burned by Trajan (A.D. 116), and subsequently by Lucius Verus, and when visited by Septimius Severus was desolate. (3) SELEUCIA TRACHEOTIS (on the site of the modern Selekkeh) was also built by Seleucus on the western bank of the Calycadnus in Cilicia Aspera. It was a rival of Tarsus, and was the birthplace of several famous men, among them the philosopher Xenarchus. Its site is still covered with its ruins. (4) SELEUCIA was likewise the name of a city in the Persian district of Margiana, originally built by Alexander the Great, and called Alexandria. Antiochus I., who rebuilt it after it had been destroyed by the barbarians, renamed it in honor of his father, Seleucus Nicator. The Roman prisoners taken by the Parthians at the defeat of Crassus (q.v.) were colonized here. (5) SELEUCIA IN MESOPOTAMIA (modern Bir) was a fortress on the left bank of the Euphrates, opposite the ford of Zeugma. There were several other cities of this name, as that on the River Belus, in Syria; on the plain of Isparta, in Pisidia; in Pamphylia, near the mouth of the Eurymedon, and elsewhere; while the city of Tralles (q.v.) was at one time called Seleucia.

SELEUCIDÆ or **SELEUCIDS**. The dynasty which ruled over that portion of Alexander the Great's monarchy which included Syria, a large portion of Asia Minor, and the whole of the eastern provinces of Bactria, Sogdiana, Persia, and Babylonia.

Seleucus I. Nicator (B.C. 312-c.280), the first of the line, was the son of Antiochus, a distinguished officer in the service of Philip of Macedon. He had been one of the conspirators against Perdiceas, and in the second partition of the provinces constituting Alexander's realm, Babylonia fell to his lot. To this, with the aid of Antigonus, he added Susiana, but a misunderstanding arose between the two generals, and Seleucus took refuge in Egypt (B.C. 316). Four years later Seleucus returned to his sat-

rapy, amid the congratulations of his subjects. The date of Seleucus's return to Babylon was the beginning of the era of the Seleucids, which was employed by the Syrians and Asiatic Greeks until the fifteenth century. Recovering Susiana, Seleucus subjugated Media, and extended his power to the Oxus and Indus. Of his campaign against the Indian King Sandrocottus (q.v.) there are but few facts known. In B.C. 306 he assumed the title of King, and four years later he joined the confederacy of Ptolemy, Lysimachus, and Cassander against Antigonus, and by his cavalry and elephants decided the issue of the battle of Ipsus in B.C. 301 or 300 against his quondam ally, who was killed in the fight. Being now the most powerful of Alexander's successors, he obtained the largest share in the conquered kingdom, a great part of Asia Minor and the whole of Syria falling to him. In 293 he gave the provinces beyond the Euphrates to his son, Antiochus, who afterwards succeeded him. He afterwards waged successful wars against Demetrius, King of Macedon, and Lysimachus, King of Thrace. He was assassinated about B.C. 280 by Ptolemy Cerannus. His son and successor was Antiochus I. Soter (c.280-61), followed by his son Antiochus II. Theos (261-46), who was assassinated by Seleucus II. Callinicus (246-26). Seleucus II. was driven from his kingdom by Ptolemy Evergetes (q.v.). He recovered his throne on Ptolemy's withdrawal, and succeeded in maintaining his hold on Syria and most of Asia Minor against both the Egyptians and his younger brother, Antiochus, who attempted to exercise independent authority over part of Asia Minor. Seleucus undertook an expedition against the revolted provinces of Parthia and Bactria, but was routed by Arsaces the Great, the deliverer of Parthia, while in the west several provinces were wrested from him by Attalus, the King of Pergamum. His sons, Seleucus III. Cerannus (226-23) and Antiochus III. the Great (223-187), were his successors. The latter was vanquished by the Romans at Magnesia in B.C. 190 and forced to relinquish a great part of Asia Minor. Seleucus IV. Philopator (187-75) was eager to dispossess Attalus of the provinces which he had taken, but fear of the Romans prevented him from carrying out his design. He was succeeded by Antiochus IV. Epiphanes (175-164), in whose reign the Jews rose under the Maccabees. The succeeding princes of the dynasty were Antiochus V. Eupator (164-62); Demetrius I. Soter (162-50), who was defeated and slain by the impostor Alexander Balas (150-46); Demetrius II. Nicator (146-38, 128-25), who overthrew the impostor, and was himself a prisoner among the Parthians for ten years, Syria having been seized by Diodotus, surnamed Trypho, who set up the puppet Antiochus IV. Theos (c.144-42), and afterwards ascended the throne himself (142-37); Antiochus VII. Sidetes (137-28), who restored the royal line of the Seleucids, after whom Demetrius again reigned until his defeat by the pretender Alexander Selina, his rule marking the loss of the original centre of Seleucid power to the Parthians; Antiochus VIII. Grypus (125-96), who was compelled to share his dominions with his half brother, Antiochus IX. Cyzicenus from B.C. 111; Seleucus V. or VI. Epiphanes (96-94), and Antiochus X. Eusebes (95-83), who continued the division until about B.C. 94, when the latter was victorious in a pitched bat-

and seized the whole kingdom, for which, however, he was forced to fight with Philip, and Antiochus XI. Epiphanes (q.v.), the younger brother of Seleucus, and Demetrius III. Eucerus (188 B.C.), a third brother of Seleucus, who, with Philip, next claimed the sovereignty, which was taken from them by Tigranes (183-69), King of Armenia, at the solicitation of the Syrians; Antiochus XII. Dionysus (q.v.), a fourth brother of Seleucus, and Antiochus XIII. Asiaticus (69-65), who came into conflict with the Romans, and was deprived of his possessions, which were converted into a Roman province by Pompey in B.C. 64.

SELEUCUS. See SELEUCIDÆ.

SELF (AS, *self*, *scelf*, Goth. *silba*, OHG., Ger. *selb*, self; perhaps connected with Ir. *selb*, possession). In psychology, a term synonymous with the 'conscious individual'; i.e. a self is a mind *plus* a body. It covers the whole range of consciousness, and is completed only in the course of the individual's existence. It is conceivable that a self should exist without self-consciousness or a consciousness of self. The self is the organism—mind and body—considered structurally; consciousness of self is a function performed by those conscious processes which refer to or ideate the self. Self-consciousness, then, is set over against consciousness of external reality, of things which lie outside the individual. The two consciousnesses are composed of similar processes, but have entirely different references. Self may also mean the mental *ego* alone. Even in the narrower sense, a 'self' or a 'mind' implies more than a collection of mental processes taken at haphazard. It implies the interrelations which always subsist among the processes of a given individual. It is often said that 'no two people are alike,' and this is undoubtedly true, quite apart from bodily differences. The dissimilarities which inhere in selves or minds are to be referred to unlikenesses of mental constitution (q.v.), i.e. to differences in memory-type, in habitual modes of association, in temperament, in liability to emotional excitement, in differences in the unitariness of one's experiences, in rash impulsiveness or balanced sanity, in tendency to criminal action or to religious fervor, and so on. All these things are indicative of ultimate variations in mental tendency. They form the basis for the heterogeneity of society.

When an individual's act exhibits his peculiar mental constitution we say that the act is 'characteristic,' that 'it is just like him,' meaning that in the action the individual has expressed his 'self-hood,' that the act was not determined by a chance impulse, but that it represented a long line of 'tendency' (q.v.). Consult authorities under SELF-CONSCIOUSNESS.

SELF-CONSCIOUSNESS. Self-consciousness or 'consciousness of self' may be either a perception or idea or it may be a concept. When one thinks of one's existence as an individual (a certain mind and a certain body) one has an 'idea of self.' If self is considered in the abstract, without any personal reference—not 'myself,' or 'himself,' or 'herself,' simply a 'self'—it becomes a concept; psychology is interested in such a concept only in so far as it is interested in concepts in general, i.e. in seeking to determine the mental processes that underlie their formation. (See CONCEPT.) It has more to in-

vestigate in the perception or idea of self. Psychology has to ask (1) what processes enter into the formation of the perception or idea, and (2) how the self comes to be perceived or ideated. These questions are most easily answered by saying that the self is a simple, unitary, active 'principle' or 'thing' which dwells within the body and directs it. But since no such 'principle' or 'thing' can be found when the mind is looked at critically, we must infer that this notion of self is got by putting a concrete though fantastic filling into the abstract conceptual self. If we scrutinize the self-idea for its real 'empirical' filling, we find that its contents vary from day to day, from minute to minute. Now it is 'myself' as performing my part in a given situation, social, professional, domestic, religious; now it is 'myself' carrying certain responsibilities, owing certain obligations, sustaining certain relations with others, possessing property, family, friends. But in all this shifting of the self-idea there are certain constant elements which support the whole. The most prominent of these are one's name, the words 'I' and 'my;' visual and tactual perceptions of the body; numerous sensations of internal movements; a feeling of 'self-complacency;' 'self-satisfaction;' and a mass of relatively stable organic sensations which are not ordinarily analyzed and referred to their various points of origin, but come to consciousness 'in the lump.' The constancy and stability of all these things depend upon bodily and mental constitution (see MENTAL CONSTITUTION and SELF), which means in every individual a tendency to appear, to feel, and to act in a definite and permanent manner.

The origin of the idea of self is partly social and partly individual. Every person is an *object* to other persons. He is treated as a permanent being, as a centre of activity and as a unit in the community. In addition to this, his own experience is more or less coherent, more or less of a whole, and his conscious actions lead him to consider himself as an originator in the external world of things. See WILL and APPERCEPTION.

(ib., 1895); Titchener, *Outline of Psychology* (ib., 1899); Stout, *Manual of Psychology* (ib., 1899); Royce, *Psychology* (ib., 1903).

SELF-DEFENSE. In law, the defense of one's person or property from threatened violence or injury by the exercise of force. Self-defense is one of the forms of remedy by self-help (q.v.). In general one may defend himself from assault or unlawful attack by the use of force provided he use no more force than is necessary to accomplish that result, and his act will give rise to no civil or criminal liability. If he use more force than is necessary to repel the attack, he will be liable both civilly and criminally for assault. Under these conditions both the assailant and the person assailed may be guilty of assault. The rule that, in the exercise of his right of self-defense, one may meet force with force is subject to one other important qualification. He may not carry his forcible resistance to the point of taking life when he may safely retreat from his assailant. Whenever

the circumstances will not permit him to retreat from his assailant with apparently reasonable safety, he may kill his assailant if such action be necessary to protect his own life or to protect his person from severe bodily injury, and his act will be deemed justifiable homicide (q.v.). Under any other circumstances the killing of an assailant under guise of self-defense is manslaughter (q.v.), and may be murder (q.v.) if the killing is premeditated. Upon the principle of self-defense one may forcibly resist an illegal arrest. The resistance, however, must fall short of taking life unless the consequence of the arrest would be to take the prisoner to an uncivilized country, where he would be beyond the reach of legal process. In that case he may kill if necessary to prevent the arrest. One may also forcibly resist an unlawful attack upon another, particularly if that other is one who has a natural claim to his protection, as a wife, child, or even a servant who is a member of his family. The law of defense of property is precisely like that relating to the defense of the person, except that under no circumstance is the taking of life as a means of protecting property justifiable. One who kills to protect property is guilty of manslaughter, and if the killing is premeditated or done under circumstances of aggravation, it may be murder.

The law also recognizes a distinct right to protect the dwelling house, as it is called, which combines the characteristics of both defense of the person and defense of the property. At common law, one's dwelling house was said to be his castle. The true meaning of the phrase is that one has the right to make his dwelling a means of defense. Once inside his dwelling, or 'at the threshold' as it was said, he might forcibly resist attacks upon himself and the other inmates of the dwelling and, without retreating, kill his assailant if necessary to repel the attack. See REMEDY; MURDER; MANSLAUGHTER; HOMICIDE.

SELF-DENYING ORDINANCE. A measure carried through the English Parliament in 1645 by the influence of Cromwell and the Independents, with the view of removing inefficient or lukewarm commanders from the army. The ordinance proposed that no member of either House should, during the war, enjoy or execute any office or command, civil or military, and that those holding such offices should vacate them in forty days. It was intended to take the executive power out of the hands of the more moderate politicians, and form an army independent of Parliament; and was the subject of violent and protracted debate, but eventually passed in both Houses, and became law. Essex, Warwick, Manchester, and others resigned, and the conduct of the war was intrusted to Fairfax, Cromwell, to whom, as a member of the Lower House, the Self-Denying Ordinance extended as much as to Essex and the rest, had the duration of his commission prolonged by the Commons on account of his invaluable services as a leader of cavalry, and by his brilliant achievements soon surpassed his commander in reputation.

SELF-HELP. A legal phrase signifying that form of remedy by which one may prevent or redress a wrong without resorting to a legal proceeding, as, for example, the right of self-defense; the right to abate a nuisance; the right of the owner to retake property of which he has

been wrongfully deprived. See REMEDY; SELF-DEFENSE; DISTRESS; NUISANCE, etc.

SELF-INDUCTION. See ELECTRICITY, paragraph *Induced Electric Currents*.

SELF'RIDGE, THOMAS OLIVER, JR. (1836—). An American naval officer, born in Boston, Mass., and educated at Annapolis. In the Civil War he commanded the *Osage* in the Red River expedition, during which he inflicted a heavy loss on the Confederates at Blair's plantation, and later led a division of the landing sailors who bombarded Fort Fisher. After the war he directed the surveys for the canal across the Isthmus of Panama, in 1869-73; was a member of the International Congress held at Paris to consider the question of that canal in 1876; and, while in charge of the Newport torpedo station (1881-85), invented a means of protecting ships from torpedoes. In 1896 he became rear admiral, and he retired in 1898.

SELIGMAN, EDWIN ROBERT ANDERSON (1861—). A political economist, born in New York City. He graduated at Columbia College, 1879, and received the degrees of Doctor of Philosophy and Bachelor of Laws from the same institution in 1884, after having studied at Berlin, Heidelberg, Geneva, and Paris. In 1885 he became prize lecturer, in 1888 adjunct professor, in 1891 professor of political economy and finance at Columbia University. In 1901 he became president of the American Economic Association. His principal works are: *Railway Tariffs and the Interstate Commerce Law* (1887); *Two Chapters on the Medieval Guilds of England* (1887); *The Shifting and Incidence of Taxation* (1892; 2d ed., enlarged, 1899); *Essays in Taxation* (1895; 3d ed., 1900); *The Economic Interpretation of History* (1902).

SEL'IM, *Turk. pron. sâ-lîm'*. The name of three sultans of the Ottoman Empire. SELIM I., son of Bajazet II., was born about 1467. He became Sultan in 1512, after dethroning his father with the aid of the Janizaries. To secure himself, he caused his father, brothers, and nephews to be put to death, thus beginning a policy which won for him the surname of the Indefatigable. In 1514 he invaded Persia and massacred 40,000 Shiites. He defeated the army of Shah Ismail near Kholi, in Azerbaijan, conquered Mesopotamia and Kurdistan, overran Armenia, and, leaving his lieutenants to complete this conquest, marched against Kansuh El-Ghuri, Mameluke Sultan of Egypt, whom he had previously endeavored to detach from alliance with the Persian monarch. The Mameluke army was totally defeated (1516) at Marj Dabik, and Syria became the prize of Selim. Kansuh's successor, Tuman Bey, succumbed to the Turkish arms and Egypt was incorporated with the Ottoman Empire (1517). The last lineal descendant of the Abbassid caliphs, who was then resident in Egypt, transmitted to Selim the title of Imam and the standard of the Prophet. The Ottoman Sultan thus became chief of Islam, as the representative of Mohammed, and the sacred cities of Mecca and Medina acknowledged his supremacy. Selim laid the foundation of a regular navy, constructed the arsenal of Pera, disciplined the Janizaries, and improved the organization of his empire. He died on September 22, 1520. Selim was an able statesman and a lover of literature and poetry.

He was succeeded by his son, Solyman the Magnificent.

SELIM II. (1524-74), known as the Drunkard, was the son of Solyman the Magnificent. He succeeded his father in 1566. The Turkish dominions were extended by the subjugation of Yemen (1570) and the conquest of Cyprus from the Venetians (1571), but the naval power of the Ottoman Empire suffered a blow in the defeat at Lepanto (q.v.), in 1571, from which it never recovered.

SELIM III. (1761-1808) was the only son of Mustapha III., and ascended the throne on the death of his uncle, Abdul-Hamid I., in 1789. He inaugurated a radical progressive policy to counteract the dangers that threatened his empire. He inherited a war with Russia and Austria, which he closed by the Treaty of Sistova with Austria (1791) and that of Jassy (1792) with Russia, whose frontiers were advanced to the Dniester. The invasion of Egypt by Napoleon (1798) led to war with France, which was concluded by a treaty signed in 1802, the Sultan remaining thereafter friendly to the French. In attempting to reorganize the army on a European model and to introduce innovations in industry Selim III. aroused all the bigotry of his subjects. In May, 1807, a formidable rebellion broke out at Constantinople, headed by the Janizaries, and the Sultan was compelled to issue a decree abrogating his reforms, but this failed to satisfy the leaders of the insurrection, and Selim saw himself forced to resign the throne to his cousin, Mustapha IV. In the 1808 uprising Mustapha-Bairaktar, the Pasha of Rustekuk, one of the Sultan's chief advisers, marched upon Constantinople, in order to reinstate Selim on the throne, but the unfortunate monarch was strangled by order of Mustapha IV.

SELINUS (Lat., from Gk. Σελινός, *Selinous*). An ancient Greek colony in Southwest Sicily, at the mouth of the Selinus river. It was founded about B.C. 629 by colonists from Megara Hybla. Its constant wars with the neighboring Elymi of Segesta led to the Athenian expedition, B.C. 415, and later to Carthaginian intervention, which resulted in the destruction of the city, B.C. 409. Though reestablished, the city never regained its former prosperity, and during the First Punic War (about B.C. 250) the Carthaginians removed the inhabitants to Lilybaeum. The ruins include the walls of the ancient Acropolis on a hill above the sea, the Necropolis, and especially the temples, seven in number in two groups, four on the Acropolis and three on a hill to the east, one of which is among the largest Greek temples known. It has an extreme length of about 371 feet and breadth of 177 feet, while the cella alone is 228 x 59 feet. Consult Benndorf, *Die Metopen von Selinunt* (Berlin, 1873).

SELJUKS. sel'jooks. A Turkish dynasty which ruled over a great part of Western Asia in the eleventh and twelfth centuries. A few years after the death of Mahmud of Ghazni (q.v.) in 1030, the Ghuz Turks, under the leadership of two brothers, Teliakyr Beg and Tughrul (Toghrul) Beg, grandsons of a chieftain named Seljuk, overran Persia and made themselves masters of it. Tughrul Beg established his authority in the dominions of the Caliph of Bagdad, by whom he was proclaimed 'King of the East and of the West'. In 1063 Tughrul died and was succeeded by Alp Arslan (q.v.), whose dominions

extended northeastward far into Turkestan, and who carried his arms into Armenia and Georgia and against the Greeks. In 1071 he took the Byzantine Emperor Romanus Diogenes prisoner in a battle fought in Armenia. Alp Arslan was succeeded by Malek Shah (1072-92), in whose reign the Seljukian Turks established their dominion in Syria and Asia Minor, where independent Seljuk sovereignties were founded. In Asia Minor arose the Sultanate of Iconium (Koniah) or of Rum (that is, the land of the Greeks, or Byzantines, whose country was known to the Mohammedans under the name of *Rum*, Rome). Toward the end of Malek Shah's reign arose the sect of the Assassins (q.v.), under the notorious Hassan ibn as-Sabbah. Malek Shah was followed by his sons, Nasir ad-Din (1092-94) and Barkiyarok (1094-1104), both rulers of little initiative. Another son, Mohammed (1104-18), who had absorbed much of the kingdom before his accession, proved more energetic. He made an active campaign against the Assassins, and was on the point of reducing them by famine when he died. He was followed by his last surviving brother, Sanjar (1118-57). This monarch paid little attention to the provinces west of Khorasan, which were broken up into little principalities, but retained firm control of the eastern districts as far as Transoxania. Within less than half a century after his death the remnants of Seljuk dominion in Iran were swept away by the Khwarezmians. In 1096 the Seljuks came into collision with Western Christendom, whose armies in the First Crusade took Jerusalem in 1096. The armies of the Second Crusade (1147-48) fought unsuccessfully against Nureddin, who made himself master of Syria, and whose dominions after his death (1174) became the prey of Saladin, Sultan of Egypt. The Sultanate of Rum outlived the other Seljuk realms, surviving till the close of the thirteenth century, when it was broken up into fragments on whose ruins the Ottoman Turks laid the foundations of their empire.

The Seljuk period is noteworthy in the history of Persian literature as being its second golden age. At the Court such poets as Omar Khayyam, Farid ud-Din Attar, Jalal ud-Din Rumi Sadi, and Anvari were honored, while art and science flourished as they have never since flourished in Persia.

Consult: Houtma, *Recueil de textes relatifs à l'histoire des Seljoucides* (Leyden, 1886-91); Horn, "Geschichte Irans in islamitischer Zeit," in Geiger and Kuhn, *Grundriss der iranischen Philologie*, ii. (Strassburg, 1900).

SELKIRK. or **SELCRAIG.** ALEXANDER (1676-1723). An English mariner, supposed prototype of Robinson Crusoe. He was born at Largo, Fifeshire, and early joined privateering expeditions to the South Seas. In 1704, when sailing master of the *Cinque Ports*, he quarreled with the captain, and was at his own request put ashore upon the island of Juan Fernandez. After a residence there of four years and four months, he was rescued by Capt. Woodes Rogers, who subsequently gave him command of the *Increase* prize-ship. He again went to sea, and rose to be lieutenant of H. M. S. *Weymouth*, on board of which he died. In 1712 there appeared Capt. Rogers's *Cruising Voyage Round the World* and Capt. Edward Cooke's *Voyage to the South*

Sea, from which Defoe is thought to have obtained most of the information he possessed respecting Selkirk. Selkirk is also the subject of Cowper's *Lines on Solitude*. Consult Howells' *Life and Adventures of Alexander Selkirk* (Edinburgh, 1829). See JUAN FERNANDEZ.

SELKIRK, THOMAS DOUGLAS, fifth Earl of (1771-1820). A colonizer and man of letters, born in Kirkeudbrightshire, Scotland, and educated at the University of Edinburgh. His life was devoted mainly to directing emigration from the Scottish Highlands to British North America. In 1803 he made a settlement at Prince Edward's Island, which from the first was prosperous; and after heroic efforts and a bloody conflict with the Northwest Fur Company, he finally established, under the auspices of the Hudson's Bay Company, a colony in the Red River Valley, now the flourishing Province of Manitoba (1817). In 1818 he left America, and, completely broken in health, went to Pau, in Southern France, where he died. An account of his troubles in settling the Red River territory is given in his *Sketch of the British Fur Trade in North America* (1816). Consult Bryce, *Manitoba* (London, 1882); and see CANADIAN LITERATURE.

SELKIRK MOUNTAINS. A mountain range in the southeastern part of British Columbia, lying west of and nearly parallel to the Rocky Mountains, from which it differs in geological formation, and from which it is separated by the long, narrow, and straight valley of the Upper Columbia River (Map: British Columbia, F 4). The latter, with its tributary, the Kootenay, and Kootenay Lake, almost completely encircle the range, which is about 200 miles long and 80 miles wide. Although lower than the neighboring Rockies, the Selkirk Range is much more Alpine in character, and consists of rugged peaks, snow fields, glaciers, and precipices, below which the slopes are densely timbered to a height of 6000 feet. The highest peak is Mount Sir Donald, with an altitude of 10,645 feet. The Canadian Pacific Railroad crosses the range at an altitude of 4300 feet through Roger's Pass, which, with the surrounding magnificent region, is a national park reserve. Consult Green, *Among the Selkirk Glaciers* (London, 1890).

SELKIRKSHIRE (anciently called Ettrick Forest). A southeastern county of Scotland, bounded by the counties of Midlothian, Roxburgh, Dumfriesshire, and Peebles, on the north, east, south, and west respectively (Map: Scotland, E 4). Area, 267 square miles; population, in 1891, 5390; in 1851, 9800; in 1901, 23,340. It consists mainly of the two parallel valleys through which flow the rivers Ettrick and Yarrow. It is largely a pastoral county. The mountains, the highest of which is Dnn Rig (2433 feet), are rounded at the top instead of peaked, and are covered generally with grass, affording excellent pasturage. The former extensive woods have disappeared. Capital, Selkirk. Consult: Craig-Brown, *History of Selkirkshire* (Edinburgh, 1886); Douglas, "A History of the Border Counties," in *County Histories of Scotland* (Edinburgh, 1899).

SEL'LA, QUINTINO (1826-84). An Italian scientist and statesman, born at Mossò, near Biella. He was educated at the University of Turin, and at the School of Mines, Paris, and was for a time professor in the Turin Mining Academy, attaining a wide reputation as engineer and miner

alchemist. In 1860 he was elected to the Chamber of Deputies. In 1861 he became general secretary in the Department of Public Instruction. He held the position of Minister of Finance three times: in 1862, under Rattazzi, in 1864-66, under La Marmora; and from 1869 to 1873, under Tanzi. He showed for self a good financier and an excellent parliamentarian. He was president of the Accademia dei Lincei (1913).

SEL'LAR, WILLIAM YOUNG (1825-90). A Latinist, born in Sutherlandshire, Scotland, and educated at Glasgow University and Balliol College, Oxford. In 1851 he was appointed assistant to the professor of Latin in Glasgow, and in 1853 he went to Saint Andrews as assistant to the professor of Greek, whom he succeeded six years later. In 1863 he was made professor of Latin in the University of Edinburgh, a position which he held till his death. Professor Sellar wrote *Roman Poets of the Republic* (1863; 2d ed. 1881), *Roman Poets of the Augustan Age* (1877), and *Horace and the Elegiac Poets*, ed. by W. P. Ker (1892). The three books are learned and brilliant.

SEL'LEERS, COLEMAN (1827-). An American engineer and inventor, born in Philadelphia, Pa. He was associated with the Globe-Rolling Mills, at Cincinnati, Ohio; the Niles Company locomotive works; and afterwards became a partner in the firm of William Sellers & Co., manufacturers of tools. His inventions include a coupling device for connecting shafting, an arrangement for feed disks for lathes, and a Kinetoscope. In 1881 he became professor of mechanics in Franklin Institute, and in 1886 non-resident professor of engineering practice in the Stevens Institute of Technology. It was through his advice as consulting engineer that the work of developing the water power of Niagara was undertaken, and he became head engineer in that enterprise.

SELLERS, COLONEL MURBERRY. A Western speculator, in whose eyes every scheme had "millions in it," in *The Gilded Age*, a novel by Mark Twain and C. D. Warner.

SELLERS, WILLIAM (1824-). An American manufacturer and mechanical engineer, born in Delaware County, Pa., and educated at private schools. In 1868 Sellers became president of the Edge-Moore Iron Company, and from 1873 to 1887 was head of the Midvale Steel Company, of Nicetown, Pa. The Edge-Moore Iron Company made the ironwork for the buildings of the Philadelphia Centennial Exposition and for the Brooklyn (N. Y.) Bridge. In 1864 he published the first formula for screw threads and nuts, now standard in the United States and regularly used in Europe.

SEL'MA. The county-seat of Dallas County, Ala., 50 miles west of Montgomery; on the Alabama River, which is navigable to this point all the year, and on the Southern, the Western of Alabama, the Louisville and Nashville, and the Birmingham, Selma and New Orleans railroads (Map: Alabama, B 3). It has Dallas Academy, a public library, and the Alabama Baptist College University, opened in 1878. Noteworthy are the court house, Young Men's Christian Association building, and the Alabama River bridge. Selma is the centre of a section engaged in cotton-growing, farming, and cattle-raising.

and a great industrial importance. Reached in 1850 the Southern Railway, cotton mills, sawmills, a large grist mill, and manufacturing of cottonseed oil, engines and boilers, iron pipes, wagons, bricks, and boxes are among the leading establishments. The government, under the revised charter of 1900, is vested in a mayor and a unicameral council. Selma was settled in 1823. During the Civil War it was an important military depot for the Confederate army. On April 2, 1865, after a sharp engagement, the garrison surrendered to a Federal army under General J. H. Wilson. Population, 1890, 7,622; 1900, 8,713.

SELOUS, *se* *loo*ʹ, FREDERICK COURTENAY (1851—). An English hunter and explorer in South Africa. In 1874 he went to South Africa, where, for nineteen years, he was almost continuously in the field, hunting chiefly elephants and earning his living by selling ivory and natural history collections. In 1890 he piloted the pioneer expedition of the British South Africa Company through Mashonaland and he was prominent in the events that brought about the occupancy of all the large territory north of the South African Republic. In 1893 he participated in the first Matabele war. After that time he lived in Surrey, England. His publications are: *A Hunter's Wanderings in Africa* (1881); *Travel and Adventure in Southeast Africa* (1893); *Sunshine and Storm in Rhodesia* (1896); *Sport and Travel, East and West* (1900); and various contributions to geographical periodicals.

SELTERS WATER. A mineral water obtained at Selters, near Limburg, in Nassau, Germany. The spring has long been known, and has a high reputation for its medicinal qualities, being recommended as a beverage in chronic disorders of the digestive and respiratory organs. It is a sparkling alkaline water containing sodium carbonate and common salt. A mineral water of similar composition to the original is now extensively manufactured in Europe and in the United States.

SELUNGS'. The inhabitants of the Mergui Archipelago in the eastern part of the Bay of Bengal, off the coast of Tenasserim; a primitive, seafaring people of doubtful ethnological relations. They are probably a branch of the 'Indonesian' race. Consult Anderson, *The Selungs* (London, 1890).

SELWYN, *sel*'win, ALFRED RICHARD CECIL (1824—). An English geologist. He was born at Kilmington, Eng., was educated chiefly by private tutors in England and Switzerland, and in 1845 was appointed assistant geologist on the Geological Survey of Great Britain. From 1852 to 1869 he was director of the Geological Survey of Victoria, Australia. He also made a special study of the coal and gold fields of Tasmania and South Australia, and in 1856 was a Victorian commissioner of mines. He was director of the Canada Geological Survey from 1869 to 1895, when he was retired and pensioned. In 1896 he was president of the Royal Society of Canada. He published large contributions to the *Geological and Natural History Survey of Canada* (19 vols., 1869-94), of which work he was the editor.

SELWYN, George AUGUSTUS (1749-91). An English wit. From his mother, a woman of the bedchamber to Queen Caroline, described as "of much vivacity and pretty," he seems to have de-

rived his wit. He studied at Eton with Gray and Walpole, and thence proceeded to Hart Hall, Oxford, from which, after very irregular attendance, he withdrew without a degree, to escape expulsion for drinking from a chalice at a wine party (1745). In 1747 he entered Parliament, where he sat, a silent member usually asleep, till 1780. In the meantime he had succeeded to the family estates (1751), and had obtained several sinecures, as registrar of the Court of Chancery in Barbados and surveyor-general of the works. He became a member of the leading London clubs, where he was known as "Bosky." Many witticisms have been fathered upon Selwyn, some of which are probably not authentic. Selwyn's jokes have long since lost their piquancy. The man and the manner made them. One may be cited. When Lord Forley crossed over the Channel to escape his creditors, Selwyn remarked that it was "a passover not much relished by the Jews." A peculiar trait of the humorist was a passion for witnessing executions of famous criminals. He died in London. Consult: J. H. Jesse, *Selwyn and His Contemporaries* (London, 1843; new ed. 1882); and Roscoe and Clergue, *Selwyn, His Letters and His Life* (ib., 1899).

SELWYN, GEORGE AUGUSTUS (1809-78). A missionary and bishop of the Church of England, born at Church Row, Hampstead. He took his degree at Saint John's College, Cambridge, in 1831, was ordained deacon in 1833, and became curate at Windsor. In 1841 he was consecrated Bishop of New Zealand, and labored there till 1867, when he became Bishop of Lichfield. He displayed great ability as an organizer, both in the mission field and at home. Selwyn College, Cambridge, was erected in his memory in 1882 by popular subscription. His works include: *Are Cathedral Institutions Useless?* (1838); *Letters to the Society for the Propagation of the Gospel*, etc. (1884); *Verbal Analysis of the Holy Bible* (1855). For his life consult Tucker (London, 1879).

SELWYN COLLEGE. See CAMBRIDGE, UNIVERSITY OF.

SEMANG', or MENDI. One of the aboriginal peoples of the Malay Peninsula, inhabiting Northern Perak, Kedah, Rahman, Ranga, and Kelantan. They are short-statured and darker than the Sakai (q.v.), from whom they are also distinguished by their curly hair. The advance of the Malays and the intrusions of Siamese and Europeans, with the ever-present Chinese, are driving these aborigines farther into the interior.

SEMANTICS. That portion of linguistic science which treats of the development of signification of words. See PHILOLOGY; SEMASIOLOGY.

SEM'APHORE. A town of the County of Adelaide, South Australia, 10 miles by rail north-west of Adelaide. It is a well-known bathing resort. Population, in 1901, about 8000.

SEMAPHORE. See SIGNALING AND TELEGRAPHY, MILITARY; SIGNALS, MARINE; BLOCK SIGNALS; STORM AND WEATHER SIGNALS.

SEMASIOLOGY (from Gk. *σημασία*, *sēmasia*, signification + *-λογία*, *logia*, account, from *λέγειν*, *legōin*, to say), or SEMANTICS. The study which treats of the meanings of words and the devel-

opment of their signification. Thus, the Latin *altus* signifies both 'high' and 'deep,' according to the position of view, whether the observer regards the situation from above or from below. Again, the force of the verb *bless*, which is employed euphemistically in several languages to denote also to *curse* (like *bless* in colloquial English), receives a semasiological explanation on the basis of euphemism. Somewhat similar in euphemistic character is the divergence in sense between German *Lust*, 'pleasure' (in general), and modern English *lust*, 'pleasure' (in a physical sense). The atmosphere of a word is constantly subject to change, owing to such external circumstances, and it is familiarly recognized that analogous conditions will call forth parallel developments in the meaning. Thus, English *heathen* from Anglo-Saxon *hæþen*, originally denoted 'belonging to the heath,' or inhabitant of the district remote from civilization and Christianity, hence 'infidel,' or in like manner *pagan*, from Latin *paganus*, originally signified a dweller in an outlying district (*pagus*), and thus acquired the force of 'ungodly.' The word *deer*, like its Greek cognate, *θηρ*, was originally employed to designate animals in general, but it has been gradually specialized to its present meaning, just as the older Sanskrit *mṛga*, 'animal,' has been narrowed in classic Sanskrit to designate a gazelle, whereas Avestan *mərəθa*, which is etymologically akin to it, has come to signify 'bird.' Simile and metaphor, alternation between the abstract and concrete, analogy and differentiation, tendencies to generalization and particularization, to expansion and restriction, elevation and degradation in meaning, are among the many forces which come into play in determining the significance of a word in its changes in connotation. Consult: Darmsteter, *La vie des mots* (4th ed., Paris, 1893); Svédelin, *La sémantique* (Upsala, 1891); Simon, *Die Gründe des Bedeutungsverfalls* (Berlin, 1894); Paul, *Prinzipien der Sprachgeschichte* (3d ed., Halle, 1898); Bréal, *Essai de sémantique* (2d ed., Paris, 1899), tr. by Mrs. Henry Cust, *Semantics: Studies in the Science of Meaning* (London, 1900); Oertel, *Lectures on the Study of Language* (New York, 1901); Welby, *Science of Meaning* (New York, 1903).

SEMBRICH, sēm'brīk, MARCELLA (1858—). A Polish operatic soprano, born at Wisniowczyk, Galicia. Her real name was Praxede Marcelline Kochanska, and she received her musical education under Wilhelm Stengel (who subsequently became her husband) and Epstein and Rokitan-sky at Vienna. Her debut (1877) occurred at Athens in *I Puritani*, and she subsequently studied German opera under Richter and Lewy at Berlin. After an eighteen months' engagement at the Dresden Court Theatre she went to London, where from 1880 to 1885 she was one of the prima donnas of the London opera, in the intervals making many successful tours in both Europe and America. In 1889 she returned to Dresden, in which city she made her permanent home. She became widely known for her remarkably pure soprano and her brilliant coloratura. Her greatest popularity was achieved in the United States.

SEMÉ, se-mâ' (Fr., sown). In heraldry (q.v.) a term used to describe a shield bearing a charge

repeated an indefinite number of times. It is then said to be some of, or with that charge, as some of fleur-de-lis.

SEMELE, sem'e-le (Lat., from Gk., Σεμελη). The daughter of Cadmus and mother of Bacchus (q.v.).

SEMEN'DRIA. A Servian fortress on the right bank of the Danube, 30 miles southeast of Belgrade (Map; Balkan Peninsula, C 2). An ancient triangular fortification, said to have been built in 1430, it is a noteworthy feature of the town. The inhabitants are employed principally in wine culture. Population, in 1895, about 7000. Semendria was at one time the seat of the Servian kings. In 1441 the Turks gained here a splendid victory over the Hungarians.

SEMENOFF, sem'yá'nof, PIETR PÉTROVICH (1827—). A Russian geographer and traveler, born in Saint Petersburg and educated there and in Berlin. He traveled extensively in Western Europe, and in 1857 made a great expedition through Central Asia to the Tian Shan Mountains where Mount Semend and the Semendoff Glacier bear his name. He explored the upper course of the Syr Darya; and also made important discoveries in Transcaaspia. Semendoff's travels were described in *Petermanns Mittheilungen* (1858) and in the *Zeitschrift* of the Berlin Geographical Society (1869). In the emancipation of the serfs he was officially prominent, and in 1864 he became director of the Bureau of Statistics.

SEMENOVKA, sem'yenó'ká. A town in the Government of Tchernigov, Russia, about 70 miles northeast of Tchernigov. It produces hides, skins, boots, and oil, and trades in bristles. Population, 1897, 15,125.

SEMESTER (Ger., *Semester*, from Lat., *semestris*, semi-annual, from *sex*, six + *mensis*, month). A name given in Germany to each of the two terms into which the university year is divided: the summer semester and the winter semester.

SEMIBREVE (It., *semibreve*, half short, from *semi*, Lat., *semi*, half + *breve*, Lat., *brevis*, short). In music, a note of half the duration of the breve (q.v.) of old ecclesiastical music, but the longest note in use in modern music. It is popularly known as a whole note, and is represented by a character circular or elliptical in

form $\underline{\underline{\quad}}$, and is adopted as the integer or measure-note, the other notes—minim, crotchet, quaver, etc.—being proportional parts of it. In measurable music (q.v.) it was the fourth in value, one quarter of a large.

SEMINAR (Ger., *Seminar*; from Lat., *seminarium*, seed-plot, sg. of *seminarius*, relating to seed, from *semen*, seed, from *severe*, to sow; ultimately connected with Eng. *seed*). A name applied to certain courses given in German and American universities. They consist of research work, carried on by the students under the direction of the professor. Seminars are offered in scientific and scholastic fields affording material for the investigator. The members of the seminar meet at various times to listen to the account of some special research carried on by one of their number and to discuss it. The seminar originated in the universities of Halle and Göttingen. The first were in philology, and aimed to prepare teachers for the classical

of the American University and other institutions generally have now introduced into the work done in the American seminaries varies greatly in the several universities, ranging from mere reports to original contributions. Consult Perry, "The American University," in Butler, *Education in the United States* (Albany, 1900).

SEMINOLE (properly *Seminoli*, separatist, runaway). A tribe of Muskogean stock (q.v.), formerly residing in Florida, and celebrated for the determined resistance which they maintained for seven years against the efforts of the United States Government to remove them from their homes. They were originally a part of the Creeks (q.v.), chiefly of the Hitchitee or southeastern division, and, as the name implies, separated from the main confederacy and overran the peninsula after it had been depopulated by the destruction or deportation of the Apalachee and Timucua (q.v.) by the English in 1702-3. They also received accessions from the kindred Yamasee, who had been driven out of Carolina by the English in 1715, and had also a considerable negro element from runaway slaves. In the early period they were frequently classed with the Lower Creeks, but they became recognized as a distinct tribe about the beginning of the Revolution. About the beginning of the last century they had about twenty towns, the most important being Mikasuki and Tallahassee. The people of Mikasuki were known as the 'Red Stick' Indians, from their custom of setting up a pole painted red as a war emblem, and were considered the leaders in every warlike enterprise. In 1817-'18 (Florida being then Spanish territory) they came into conflict with the Americans and their country was invaded by General Jackson, who destroyed their principal towns, hung the two English traders (Arbuthnot and Ambrister) who had instigated the trouble, and ultimately brought about the cession of Florida to the United States in 1819. In 1822 they were reported to number 3100, besides 800 negroes living with them. By the Treaty of Payne's Landing in 1832 they were pledged to remove to the west of the Mississippi, but the treaty was repudiated by a considerable part of the tribe under the leadership of the young chief, Osceola (q.v.), the result being the most desperate and costly Indian war in the history of the Government. It began with the surprise and massacre of Major Dade's entire command of one hundred men on December 28, 1835, and continued until 1842, resulting in the loss of thousands of lives and the expenditure of ten million dollars. In the end the Indians were conquered and removed to the Indian Territory, with the exception of a few hundred who remained in Florida.

Those removed to the Indian Territory and their descendants constitute the 'Seminole Nation' with a government organized upon the general plan existing among the others of the 'Five Civilized Tribes,' viz. Cherokee, Creek, Choctaw, and Chickasaw. With these also they came under agreement for individual allotment of their tribal lands and absorption into American citizenship in 1906. The number of 'citizens' of the Seminole nation officially reported in 1901 was 2757, but this includes also adopted negroes, whites, and Indians of other tribes. A special report of the

census of 1890 gives them 2739 'citizens,' classified as: Seminole, pure and mixed with white, 1621; negro and mixed negro-Seminole, 806; white, 172; Indians of other tribes, 140. The report also states that the Seminole intermarry with negroes, and that probably all those given as of negro descent would be classed by the Seminole themselves as Seminole. Those in Florida are in the Everglade region in the southern portion of the peninsula and were reported at 360, a considerable increase over earlier estimates. They refuse to mingle with the whites and retain most of their primitive customs derived from their Creek ancestors, including the ceremonies of the black drink and the green corn dance. They are strict monogamists. As they have no title to their lands, the Government has taken steps to secure for them a small reservation to include their main settlements. See CREEK.

SEM'ONO'TUS. A genus of ganoid fishes, the fossil remains of which are found in the Triassic rocks of Europe. *Lepidotus* is an allied genus, also occurring in the Trias.

SEMPALATINSK, sã'mã-pã-lã-tyënsk'. A territory of Russian Central Asia forming an administrative division of the Governor-Generalship of the Steppes. It is bounded by Tobolsk and Tomsk on the north, Sungaria on the southeast, Semiryetensk on the south, and Akmo-linsk on the west (Map: Asia, G 4). Its area is estimated at from 188,000 to over 194,000 square miles. In the north the surface has the appearance of a steppe. The southeastern part belongs to the region of the Altai Mountains, and other chains cover the southwestern part. There are extensive valleys between the chains. The principal river is the Irtysh, which is navigable through its entire course in the territory. The largest lake is Saisan, about 80 miles long and from 10 to 20 miles wide. There are also numerous lakes along the Irtysh and in the mountains, and Lake Balkhash touches the territory on the southwest. Gold, silver, lead, copper, graphite, and coal are the principal minerals. The climate is very severe. The winters are characterized by extreme cold and fearful snow storms, while the summers are very hot, the mean temperature ranging from 72° for July to 5° for January. The precipitation is scanty, and only in a small part of the territory can agriculture be carried on without irrigation. Agriculture is the principal occupation of the settled and of a part of the nomadic population, and is gradually increasing in importance. The principal agricultural products are wheat and oats. The nomadic Kirghizes, who form the bulk of the population, are engaged chiefly in stock-raising, and their herds numbered, in 1896, over 3,400,000 head, including nearly 72,000 camels and over 740,000 horses. Fishing is also of some importance. Some of the lakes yield considerable quantities of salt. The manufacturing industries are naturally insignificant, the principal products being leather, tallow, soap, flour, and spirits. In 1897 the population was 685,197. The Mohammedans number over 550,000.

SEMPALATINSK. The capital of the Territory of Semipalatinsk, in Central Asia, on the right bank of the Irtysh, 2290 miles east-southeast of Moscow (Map: Asia, G 3). It has a

library, a museum, and a number of mosques. In the vicinity are Tungus ruins with religious inscriptions. The principal products are tallow and leather. Population, in 1897, 26,350.

SEMI-PELAGIANISM. A late designation of a Western heresy of the fifth and sixth centuries, akin to Pelagianism (q.v.). Although Pelagianism itself had been condemned, not a few Christians endeavored to hold an intermediate position between the doctrine of Augustine (q.v.), with its accompaniments of original sin, natural depravity, and efficacious grace, on the one hand, and the rather superficial moral-ability theory of Pelagius, on the other. It has been justly observed that these mediators might, with almost equal propriety, have been called Semi-Augustinians. They taught that, although divine grace cooperates with human effort in the process of redemption, and may be kept or lost, according to the choice of each individual, the first inclination to the good and final perseverance may originate with man himself, for Adam's sin did not destroy all ability to seek the good, although it greatly weakened it. Every one may be saved, if he will. Predestination is not unconditional, but depends upon God's foreknowledge. These views first appear in Africa, among the monks, but their great centre was Massilia (Marseilles), in Southern Gaul, whence their advocates were called Massilians. Chief among them were John Cassian (died c.435), Vincent of Lerins (died c.450), and somewhat later Faustus of Riez (died 492), all of whom held positions of honor and influence in the Church. They are typical of the many who highly esteemed Saint Augustine, but could not bring themselves to accept the logical consequences of his theology.

The beginnings of Semi-Pelagianism were observed as early as 428-429, by Prosper of Aquitania, and by him reported to Augustine, with the request that he would lift his voice and pen in opposition. This he did willingly enough in his two works *On the Predestination of the Saints* and *On Perseverance*. Prosper also appealed for aid to Celestine, Bishop of Rome, and the latter promptly issued a letter to the clergy of Gaul, rebuking their dangerous speculations. Among later opponents of Semi-Pelagianism were Avitus of Vienne (died c.525), Fulgentius of Ruspe (died 533), and Casarius of Arles (died 543). The controversy is usually regarded as terminated by the adverse decisions of the Synod of Orange (529), over which Casarius presided. Its decrees were soon afterwards confirmed by Pope Boniface II.

Subsequent doctrinal history exhibits a wavering of opinion as to the relative value of the two opposing systems associated with the names of Augustine and Pelagius. In the ninth century Rabanus Maurus and Hinemar of Rheims maintained the Semi-Pelagian view against the thorough-going predestinarianism of Gottschalk, and secured his condemnation by synods at Quierzy (849) and Valence (855). The schoolmen and the mendicant Orders carried on the debate with great warmth. In the seventeenth century the Jansenists (q.v.) were vigorously opposed by the Jesuits for reviving so-called Augustinianism, which by that time had become almost obsolete. Among Protestants Melancthon showed Semi-Pelagian leanings, whence developed the bitter

Synergistic controversy (see SYNERGISM), while the Dutch Arminians illustrate a similar conflict of opinion among Calvinists. See ARMINIANISM. Consult: Rainy, *The Ancient Catholic Church*, vol. i. (New York, 1902); Bright, *The Age of the Fathers*, vol. ii. (London, 1903); Harnack, *History of Dogma*, vol. v. (Eng. trans., London, 1898). Consult also the literature cited under PELAGIUS, and see the notices of the advocates and opponents of Semi-Pelagianism mentioned in this article.

SEMIQUAVER. A musical note, represented thus,  or in groups thus, 

equivalent in value to 1-16 of a semibreve, or whole note. The *Præctica Musica* of Gafurius (Milan, 1496) contains the earliest mention of the semiquaver.

SEMI-QUIETISM. A form of mystical asceticism which, although it adopts the theoretical principle that the most perfect state of the soul is that of passive contemplation, and denies, in certain conditions of the soul, the necessity of prayer or other active manifestations of virtue, yet maintains the incompatibility of this passive contemplation with any external sinful or sensual action. The Semi-Quietists thus differed from the grosser sectaries referred to under QUIETISM.

SEMIR'AMIS. A legendary queen of Assyria. According to Ctesias (in *Diodorus Siculus*, H. i.), she was daughter of the Syrian goddess Derecto (of Ascalon), was exposed as an infant, but was miraculously saved by doves, and became the wife of one of the chief officials and generals of Ninus, King of Assyria and founder of Nineveh. She accompanied her husband on a campaign against Bactra and, by her ingenuity and daring, captured the city. This exploit won the notice of the king, and, captivated by her charms, he demanded her from her husband. The latter committed suicide. Semiramis married Ninus, bore him a son, Ninyas, and ruled as regent after the king's death. She founded Babylon and built the city in its full splendor and magnificence with all its walls, gates, palaces, and temples. She built many other cities, constructed roads and canals, and other great works. She conquered Persia, Egypt, Libya, and Ethiopia, and invaded India, but there her army was defeated and she was wounded in personal combat with the King Stabrobates. Wherever she went she constructed great works, levelling mountains and raising elevations in plains. In time every great work was ascribed to her, so that the land was full of the works of Semiramis. Ultimately her son grew restive under her rule and plotted against her, when she disappeared, in the sixty-second year of her age and forty-second of her reign. Some say she was changed into a dove and became a deity. She is represented as of sensuous character. The story is evidently an epitome of Assyrian history hung upon the names of Ninus and Semiramis, and the Queen herself is in all probability a distortion of Ishtar, the Assyrian goddess of war and love. (See ISHTAR.) According to Herodotus (I. 181), there was a Semiramis queen of Babylonia in the first half of the eighth century, n.c.

SEMIRYETCHENSK. *sa-mi-rye'-chen-sk'.* A territory of Turan in Central Asia, belonging administratively to the Governor-Generalship of Russian Turkestan. Area, over 155,000 square miles (Map: Asia, G 4). It is divided according to the formation of its surface into two parts, of which the southeastern is mountainous, being traversed by offshoots of the Tian-Shan Mountains (q.v.), and the northwestern belongs to the region of the steppes, with sandy stretches along Lake Balkhash. The rivers rise mostly in the Tian-Shan Mountains and flow into Lake Balkhash. The chief of them is the Ili, which is also the principal navigable waterway of the territory. The principal lakes are Balkhash (q.v.) and Issik-kul (q.v.). The climate is continental. The winter is extremely cold and the summer, which follows a brief spring, is hot and dry. In the mountainous portions are found gold, salt, and alabaster. Much of the lower part of the territory is fertile agricultural land which becomes very productive when irrigated. The crops in the northwest consist mainly of wheat, oats, and oleaginous plants. Agriculture, however, is as yet of secondary importance, as the nomadic Kirghizes, the predominating element of the population, are engaged almost exclusively in stock-raising. Population, in 1897, 990,107, of whom the Kirghizes constitute three-fourths. Capital, Vyerny (q.v.).

SEMITES. A name used to designate a certain group of peoples whose close kinship is revealed by many physical and mental characteristics, but especially by language and religion. The term is derived from the table of nations in Genesis x., in which the eponym heroes of some Mediterranean peoples known to the authors are represented as descendants of the three sons of Noah, Shem, Ham, and Japhet (qq.v.). But, as a matter of fact, all the nations here grouped under Shem are not akin; some of the peoples arranged under Ham are evidently kinsmen of the leading nations reckoned as descendants of Shem, and some peoples are mentioned under both Shem and Ham. Historical and geographical reasons seem to some extent to have prevailed in the arrangement. But in spite of the inexact classification in Genesis x., the term 'Semites' has been retained for the sake of convenience in preference to other designations which have been proposed, such as 'Syro-Arabians' or simply 'Arabs.' As it is now used, it indicates Babylonians, Assyrians, and Chaldeans; Phœnicians, Carthaginians, and other Canaanites; Israelites, Edomites, Moabites, and Ammonites; Arameans; Arabians and Ethiopians.

As to the original home of these Semitic peoples there is a preponderance of opinion in favor of Arabia or Africa. On the other hand, recent discoveries have tended to revive the idea of a Babylonian origin. Certain customs, possessions, and achievements of the early Egyptians exhibit a marked similarity to those of their contemporaries in Babylonia. Some scholars find it most natural to explain the introduction of metals, domestic animals, a peculiar mode of burial, and the use of brick in a land where stone is found in plenty, by the immigration into the Nile Valley of a Semitic race that once lived in Babylonia. Closer examination, however, has shown the identity of the Neolithic race in Egypt with the dynastic Egyptians. The

close affinity ethnologically between the Egyptians and the other so-called Hamitic peoples, such as the Libyans, the Berbers, the Cushites, the Gallas, the Danakils, and the Somali, renders it improbable that the Egyptians were immigrants from Asia. Nevertheless, the kinship of the North African languages with the Semitic speech is unmi-stakably shown in numerals and prepositions, noun formation and verb inflection, syntax, and morphology. (See SEMITIC LANGUAGES.) Some scholars have therefore drawn the conclusion that the Semites are likely to have lived originally in Africa, though not as differentiated Semites, and to have crossed into Arabia by Bab el-Mandeb or Suez, where in new surroundings and seclusion their characteristic peculiarities may have developed. From Arabia succeeding waves of emigration sent Semitic nomads into Babylonia, Mesopotamia, and Syria. The invasion of Babylonia must have occurred very early, since already in the fifth millennium B.C. the influence of the Semitic speech is seen in the Sumerian language (q.v.) and the religious conceptions of Babylonia in the fourth millennium reflect conditions of society no longer prevalent in the time of the Minoan Empire. (See MINOANS.) It is impossible to date with certainty the invasion of Syria, but there is a tradition that brings the foundation of some Phœnician cities back to the first half of the third millennium B.C. (see PHœNICIA), and there is no reason to doubt that Palestine attracted the Semitic nomads even at an earlier time. How soon the tribes subsequently developing into the nations of Israel, Edom, Moab, and Ammon drifted into Syria cannot be determined. Some passages in the Amarna letters written about B.C. 1400 mentioning the *Habiri*, possibly a cuneiform equivalent of *Ibiri*, Hebrews, seem to refer to them. Arameans had settled in Mesopotamia and Babylonia at least as early as the thirteenth century B.C., and Chaldeans are found in the neighborhood of the Persian Gulf not much later. Semites speaking a decidedly Sabaean dialect seem to have lived in Abyssinia in the seventh century B.C. and probably long before that time. See ETHIOPIA.

The Semites belong to the white Caucasian race. Physically, the Semitic type has probably maintained itself most pure in Arabia. In Babylonia it is likely to have been modified by the Sumerians, in Assyria by the Gutians, in Mesopotamia by the Mitannians and Hittites, in Syria by the non-Semitic aborigines, in Abyssinia by Hamitic tribes, in Carthage by the Berbers. During the period of the caliphs the Arabs in the conquered lands intermarried with the nations and the mixture of blood was increased by the harem life. Nevertheless, there are certain unmistakable physical characteristics of the Semitic race, such as a tendency to prognathism, fullness of lip, an aquiline nose, and wavy or curly hair.

It is widely held that the Semitic mind is analytical rather than synthetical, practical rather than speculative, inclined to occupy itself with details rather than with generalizations; the race excels in commerce and industry rather than in warfare and statecraft, in morals and religion rather than in science and art. In the main this estimate is probably fair. There are not wanting scholars, however, who look upon it as a one-sided characterization. In order to reach a comprehensive and well-balanced judg-

ment their arguments must be given due attention. The fact that Semitic speech avoids the formation of compounds is no doubt a most significant indication of an analytical rather than synthetical tendency; and the marked capacity for keen analysis coupled with a striking inability to systematize knowledge, seen in the Arabic philosophers not less than in the Talmud, is in harmony with this. Nevertheless, there is force in the argument that three monotheistic religions created by this race indicate a deep sense of unity and a remarkable power of synthesis. It should be observed, however, that monotheism with the Semites is not so much a result of processes of ratiocination as of the concentration of worship upon one god. The correctness of ascribing to them a certain sober, matter-of-fact way of reasoning may not be seriously questioned on the ground of allegorizing common among Hellenistic Jews, the curious flights of Cabalists from the solid ground of reality, or the speculations of some Arabic and Jewish philosophers of the Middle Ages, since in these instances it is necessary to reckon largely with infusions of foreign blood and foreign thought. To what extent the mythical lore of Babylonia was the creation of Semites and not of their predecessors, the Sumerians (see SUMERIAN LANGUAGE), is difficult to determine. Our most prolific sources do not reveal the wealth of myths once no doubt flourishing in Syria and Arabia; they are late and are written either from the standpoint of monotheism interested in the suppression or transformation of the myths, or from the standpoint of rationalism interested in translating them into history. Much weight must be attached to the peculiar idealism that so often manifests itself among the Semites in prophetic enthusiasm and devotion to lofty aims promising no immediate returns. It is indeed to be observed that the prophetic outlook is most sober where it is least affected by foreign movements of thought; and it cannot be denied that the cases of love of the ideal for its own sake become more striking by contrast with the prevailing devotion to a certain cause because of the tangible reward it will bring.

To the growth of political life the contributions of the Semite do not appear to have been very great. His attitude is that of the Orient as distinct from the Occident, and there is less difference between him and the Persian than between the Persians and their kinsmen, the Greeks. The superiority of the Semite as a trader is not wholly due either to a survival of nomadic habits or to the social conditions of an exile from home not permitted to engage in agriculture. Cuneiform inscriptions reveal an extraordinary development of commercial relations, including banking, contracts, deeds, book-keeping and the like, in ancient Babylonia among a settled people, whose land was carefully cultivated. Such peoples as the Arameans settled in Mesopotamia; the Yemenites, the Edomites, and the Phœnicians were great traders. From Carthage, Rome secured her text-books on agriculture; yet Carthage was even more famous for her commerce. No doubt the heaviest debt that science owes to the Semites is for faithful transmission of knowledge originally won by others. Babylonians, Arameans, Arabs, and Jews have done yeoman service as intellectual brokers. It should not be questioned, however,

that they have added not a little to the precious burdens they have carried down the ages, especially in astronomy, mathematics, chemistry, anatomy, and philology. At least one Arabic historian, Ibn Khaldun, deserves to be ranked with the greatest interpreters of history in any age.

To what extent religious protests against images prevented a normal development of native capacities for the plastic arts cannot be known. The statues found at Telloh can probably not be claimed for the Semites. They give the impression of being the ripe fruits of a long growth among the Sumerians. It can scarcely be an accident that such works of art are not found in later periods of undoubted Semitic dominance. The Assyrians certainly excelled in the representation of animals, but do not seem to have developed otherwise a high artistic taste. The representations of the human figure on South Arabian monuments are exceedingly crude. It is chiefly in the arabesque, based upon mathematical motives, that the Semitic art achieved a distinct triumph. There is reason to suppose that music may have reached a comparatively high degree of development among the ancient Semites. Unfortunately, it is not possible to determine its exact character. The Semitic race has never produced a great drama or epic poem. But the Semite excels in lyric poetry. The finest examples are the Book of Job (q.v.) and the poems of Heine (q.v.), though the Psalms, Canticles, and the Muallakat furnish some passages of genuine inspiration. This tendency also created an elevated prose or semi-poetry found in oracles, as in the prophetic writings and the Koran, often with a definite metre and a simple rhyme. There have been great philosophers among the Semites such as Philo, Ibn Gabirol, Maimonides, Spinoza, Avicenna, and Averroes, but their contributions are indicative of the influence of foreign speculation rather than representative of native tendencies of thought, finding expression through these men of genius.

On the other hand, it may be questioned whether the sense for conduct and the genius for religion accredited to the Semites have not to some extent been exaggerated. It is true that so early a production as the Code of Hammurabi (q.v.) exhibits surprisingly advanced ethical conceptions. The legislative codes of Israel, especially Deuteronomy (q.v.), show much concern for the poor, the weak, and the slaves, and seek to safeguard the sanctity of the family, and the commentaries on the Law in the Mishna and the two Talmuds reveal a sturdy moral sense endeavoring to apply the Law to the various conditions of life without making the burdens too heavy. The great prophets put the emphasis very strongly on the moral requirements, equity, justice, and mercy. In their spirit Jesus gave paramount importance to the inner disposition and made love the fulfillment of the law. South Arabian inscriptions show a deeper consciousness of sin as well as a keener religious sense in general than the secular songs of a late syncretistic period had led men to expect. And the moral earnestness of Mohammed himself and many followers of this prophet must be recognized. But no Semitic people ever conceived of such a marvelous adjustment of character and destiny as the Indian doctrine of metempsychosis presents. The emphasis upon truthfulness seems

of the Persians. The uncompromising spirit that led the Feuton to inaugurate a new epoch in the twilight of the gods, and his moral delinquencies is only apparent in the Book of Job. Yahweh may repent of what he has done, but he is not punished for his errors. Without the impact of ideas essentially foreign to his native modes of thought, and recognized as such by his kindred, no Semite has ever risen to the conception of moral autonomy. The question why one course of action should be preferred to another has been universally answered by the Semite by reference to a law imposed from without. This dependence upon an external authority for a standard of right has no doubt strengthened the religious feeling. Another cause of religious fervor has been sought in the institution of polyandry which apparently prevailed among the early Semites to a greater extent than among any equally gifted race, and continued, long after another type of marriage had taken its place, to exercise its influence in the worship of a mother-goddess who freely gives herself even to human lovers. A religious mysticism ultimately based upon such a conception of sexual relationship poured a wealth of tenderness and devotion into the worship of the supreme tribal god and remained an important factor long after the mother-goddess cult had ceased. That the Semite possesses a capacity for intense religious faith is manifest; the name of Jesus would alone prove this. He was preceded and followed by many prophets in Israel; but Mohammed is the only important witness to the power of the religious feeling in the home of all the Semites. The fact that monotheism was reached by Jews and Arabs, not by reasoning, but by faith in and devotion to the tribal god, is itself a testimony to the hold religion had on these people. Nevertheless, it is impossible to escape the impression that neither the consciousness of the unity of the divine life, nor the sense of mystic union with the divine, nor the devotion to a divinely ordained mode of life, was ever so universal or so intense among the Semites as it has been in India. If the Semites are to us the people of religion *par excellence* it is because through the prophets of Israel, and preëminently through the founder of Christianity, a form of religion has found its way into the world which, independent of cultic performances and changing intellectual apperceptions, presents high ethical motives and ideals touched with a sense of the infinite mystery and sacredness of life.

Consult also the works mentioned in the article SEMITIC LANGUAGES.

SEMITIC LANGUAGES. The current designation of a group of languages sharply marked off from other groups by certain characteristic features pertaining both to morphology and to lexicography. The name Semitic is an unfortunate one, derived from the classification of nations in the tenth chapter of Genesis. (See SEMITES.) In retaining it we must not only bear in mind that it is a purely conventional designation for a certain group of languages, but also distinguish between its ethnic and linguistic applications. It does not follow that nations speaking the same languages belong necessarily to the same stock.

Confining ourselves to the linguistic application, we may distinguish two chief branches of Semitic speech—a northern and a southern. To the northern branch belong (1) the Babylonian-Assyrian; (2) the Aramaic, subdivided into a western and an eastern branch (see ARAMAIC); (3) Hebrew-Phœnician. To the southern branch belong (1) the Arabic, which again is divided into north and south Arabic, and (2) Ethiopic.

In comparison with the territory throughout which the Indo-Germanic languages are spoken the area of Semitic speech is exceedingly limited. Excluding the modern Hebrew and modern Arabic, which have been carried by Jews and Arabs to distant parts, the Mediterranean and the Euphrates, the Indian Ocean and the Taurus range represent the western, eastern, southern, and northern boundaries for the groups of Semitic languages. As a direct consequence of these narrow confines, the relationship of the various Semitic languages to one another is much closer than is the case with the various Aryan groups (e.g. Persian and Teutonic); it is almost justifiable to call them dialects rather than separate languages.

The chief traits characterizing the Semitic languages are: (1) Within the historical period of the languages, the trifurcated character of most of the stems underlying both nouns and verbs; (2) in the morphology, the constant character of the consonants forming the stems, the vowels being used to indicate the variations on the main theme; (3) substantial agreement in the noun and verb formation; (4) the arrested development in the expression of time relation in the case of the verb, which does not pass beyond the differentiation between a completed and an incomplete act; (5) the use of certain consonants in all the languages (particularly h, n, sh, t) for pronominal prefixes and suffixes and for indication of plural and feminine, as well as variations of the verbal stem corresponding in a measure to modes in Indo-Germanic languages. Other traits might be mentioned, such as the paucity of auxiliary particles, more particularly conjunctions; and it should be noted that while the Semitic languages agree closely in having the same words for common terms (such as father, mother, brother, water, food, deity, heaven, etc.), there are, however, notable exceptions (e.g. man); and in the case of verbs there is considerable individuality manifested in the specific meanings developed by each language from the very general one which is usually attached to a particular stem.

In the form of writing employed there is even more variation, no less than three distinct species being employed in the groups comprising the Semitic languages: (a) the cuneiform char-

acters of Babylonia and Assyria, which, originating in a pictorial script, became linear or wedge-shaped (see CUNEIFORM INSCRIPTIONS); (b) the Phœnician and its derivatives, Hebrew, the various Aramaic alphabets, and further derivatives from the latter: the Syriac and Arabic alphabets; the Phœnician itself may revert to the characters found in the south-Arabic inscriptions; (c) the Ethiopic, which may likewise be a derivative of the ancient south-Arabic (Sabaean and Himyaritic) alphabet, though other factors have entered into the production of some of the peculiarities presented by the Ethiopic alphabet. See ALPHABET; INSCRIPTIONS.

Of the various groups of the Semitic languages, the Babylono-Assyrian merits the first place by virtue of the antiquity of its literature. The excavations in Babylonia and Assyria (q.v.) have brought to light inscriptions that date back to about B.C. 4500 and as early as B.C. 2500 there appears to have existed quite an extensive literature, chiefly historical, legal, and religious. Later we find other branches like medicine and astronomy represented. Assyria adopted the script together with the general culture of Babylonia, and while it made few contributions to the literature outside of annals, prayers, and incantations, great care was taken by some of the kings to copy and preserve the literature produced in the south. The cuneiform characters in various modifications continued in use in Mesopotamia until a few decades prior to the present era.

The Aramaic branch is distinguished by the large number of its subdivisions and dialects and by the large territory over which these subdivisions and dialects are spread at a comparatively early period. The extensive sway of Aramaic is almost coequal with the range of Semitic speech, and some of the Aramaic dialects developed sufficiently distinct traits to fall within the category of separate languages. By far the most important representative of the group is the Syriac, or the Aramaic dialect spoken in Edessa, Harran, Nisibis, and other places in Mesopotamia. The Babylonian dialect of the Aramaic was adopted by the Jews of the Exile; its form in the period A.D. 250-450 may be seen in the Babylonian Talmud. A similar dialect, though less exposed to foreign influence, was the Mandaic. The Aramaic dialect spoken in Judea has been preserved in the Bible (portions of Ezra and Daniel) and in the earlier Targums. Another Aramaic offshoot is the Samaritan, being the dialect spoken in the district of Shechem, and of importance as the tongue of the Samaritan community. The Galilean dialect, as it was spoken in the third century A.D. and later, has been preserved in many Targums and in the Babylonian Talmud. For further detail concerning these languages and their literatures, see the articles ARAMÆIC; SYRIAC; MANDEANS; SAMARITANS.

In the Hebræo-Phœnician group, the Hebrew merits the first place by virtue of the fact that the bulk of the Old Testament is written in this language. (See article JEWS, sections *Hebrew History and Language and Literature*; also HEXATEUCHI; PENTATEUCHI.) Hebrew literature is also represented by the older division of the Talmud known as the Mishna (q.v.), containing the codification of the Rabbinical laws. This section of Hebrew literature was edited about

A.D. 200. A number of Midrashim are likewise written in this Neo-Hebræan speech. By this time Hebrew had long ceased to be the current speech of Jews, who in Palestine had adopted Aramaic, and outside of Palestine the language of the countries in which they were settled, but Hebrew still maintained its sway as the tongue of sacred writ and as the official language of the synagogue. In view of this it continued to be cultivated not only by the learned, but by the masses as well, so that from time to time Hebrew witnessed literary revivals. Such a revival took place in Spain in the eleventh and twelfth centuries, and again in Russia and Eastern Europe in the nineteenth century, so that numerous works in Hebrew continue to be published up to the present time. The Hebrew of the Middle Ages and the Neo-Hebrew are modeled entirely upon the biblical style; and, since it is artificially cultivated and nowhere used as the sole language of interchange, it can hardly be designated as one of the living Semitic languages. Hebrew being merely the Canaanitish speech adopted by the Israelites upon taking possession of Canaan, it follows that it is practically identical in its earliest form with Phœnician, since the Phœnicians are merely Canaanites who settled on the shore instead of in the interior of Palestine. The Phœnicians do not appear to have developed any literature, and the language is known to us only from the vast number of mortuary and votive and commemorative inscriptions found in Phœnicia itself, and in even larger quantities in the colonies of the Phœnicians, notably in Cyprus, Northern Africa, Sardinia, Malta, Southern Spain, and Southern France. These inscriptions cover the long period from about the eighth century B.C. up to the end of the second century of our era. Their interest is chiefly (1) epigraphical in enabling us to trace the development and modifications of the Phœnician script, and (2) linguistic as furnishing the means to the study of a Semitic tongue that was the first to spread outside of Semitic territory. (See PHEENICIA.) Presenting only slight variations from the Hebrew and Phœnician is the Moabitic, represented by a single inscription of the Moabitic King Mesha (see MOABITE STONE), and which is of special interest as representing the oldest alphabetical inscription in ancient Phœnician or Canaanitish script.

Of the southern branch the chief representative is the Arabic, the Semitic language which has far exceeded all others in the wide character of its influence. It was the rise and spread of Islam that gave to Arabic as the language of the Koran its supreme importance. Previous to that time Arabic was confined to the peninsula of Arabia; several dialects prevailed, and the one that became the classical speech was the form spoken in Mecca, the birthplace of the Prophet Mohammed. Leaving southern Arabic out of account for the present, Arabic literature previous to Mohammed was confined to poetical compositions which were preserved orally. Islam marks not only a religious innovation, but was also an intellectual movement that gave rise to written literature among the Arabs, and as the Arabs came into contact through the spread of Islam with the existing Oriental and Occidental cultures, the various branches of science, medicine, philosophy, theology, mathematics, geography, history, besides poetry, were cultivated

of a remarkably extensive and important literature produced in Arabic during the five centuries following the appearance of Mohammed. About that period a decline set in, though the literary activity of the Arabs never came to a standstill, and within the past fifty years, through contact with modern European culture, a new era of intellectual activity has been inaugurated among the Mohammedans in Turkey, Egypt, and India, which appears to be spreading to other centres of Islam. (See ARABIC LANGUAGE AND LITERATURE.) The culture of Southern Arabia is far older than that which arose in Central and Northern Arabia. As early as at least as B.C. 1500 a powerful kingdom existed in Yemen, and although no literary remains have been preserved, inscriptions in large numbers have been found, revealing a distinctive variety of Semitic script as well as a distinctive species of Arabic which is commonly termed Sabean or Himyaritic. The relationship of the southern Arabic script to the Phœnician is a problem that has not yet been cleared up. Much speaks in favor of regarding the former as the prototype of the latter, though the links leading from the one to the other are missing. The south-Arabic inscriptions covering a period of about 700 years (so far as they can be dated at all) are chiefly of a votive or commemorative character, and throw light upon the history and religion of the old south-Arabian kingdoms that at one time played no inconsiderable rôle. See INSCRIPTIONS; MINÆANS; SABÆANS.

The Ethiopic literature in the proper sense, or the Ge'ez (to use the native name), dates from the introduction of Christianity into Abyssinia. That literature is almost exclusively religious and consists mainly of homilies, religious poetry, and lives of saints, besides some chronicles. The language survives in several dialects (Tigre, Tigriña, Amharic) spoken in Abyssinia. The alphabet, derived from the south-Arabian script, presents the peculiarity that the vowel sounds are indicated by modifications of the consonants which they accompany. See ETHIOPIA; ETHIOPIC WRITING; AMHARIC LANGUAGE.

Many attempts have been made, sometimes in a very superficial fashion and sometimes by the use of scientific methods, to establish a relationship between the Semitic languages and the Indo-Germanic. But all these endeavors have failed. On the other hand, the Semitic languages bear so striking a resemblance in some respects to certain languages of Northern Africa, that the existence of some relationship between the two groups may be assumed. These languages belong to the family sometimes called 'Hamitic,' and composed of the Egyptian, Berber, Beja (Bishari, etc.), and a number of tongues spoken in Abyssinia and the neighboring countries (Agau, Galla, Dankali, etc.). Some of the indispensable words in the Semitic vocabulary (as, for instance, 'water,' 'mouth,' and certain numerals) are found in Hamitic also, and these words are such as cannot well be derived from trilateral Semitic roots, and are more or less independent of the ordinary grammatical rules. Important resemblances in grammar are also noted—for example, the formation of the feminine by means of *t* prefixed or suffixed, that of the causative by means of *s*, similarity in the suffixes and prefixes of the verbal tenses, and, generally, similarity in the personal pronouns,

etc. There is also much disagreement; for instance, the widest divergence is found in the mass of the vocabulary. The question is involved in great difficulties. Isolated resemblances may have been produced by the borrowing of words. But the great resemblances in grammatical formation are harder to explain as due to borrowing on the part of the Hamites, more especially as these points of agreement are also found in the language of the Berbers, who are scattered over an enormous territory, and whose speech must have acquired its character long before they came into contact with the Semites.

SEMITONE (Lat. *semitonium*, half tone, from *semi-*, half + *tonus*, tone). In music, the smallest interval in the diatonic scale, as E F or B C, in which the ratio is as 15 to 16. In the pianoforte, the interval between any two notes between which no other note is interposed, as C to C₂, or B₂ to B, is a semitone.

SEMLER, zêm'lör, JOHANN SALOMO (1725-91). One of the most influential German theologians of the eighteenth century. He was born at Saalfeld, where his father was archdeacon. He was educated at Halle, and in 1752 was appointed professor of theology there. Semler, in the early part of his career, was influenced by Pietism, but later he adopted a moderate rationalism, of which he was the first systematic exponent. His principal works are: *Apparatus ad Liberalem Veteris Testamenti Interpretationem* (1773); *De Demoniacis* (1760); *Umständliche Untersuchung der dämonischen Leute* (1762); *Versuch einer biblischen Dämonologie* (1776); *Commentationes Historicae de Antiquo Christianorum Statu; Observationes Nove quibus Historia Christianorum usque ad Constantium Magnum Illustratur* (1784). Consult his autobiography (Halle, 1781-82); Schmid, *Die Theologie Semlers* (Nördlingen, 1858).

SEMLIN, zêm-len' (Hung. *Zimony*). A city in Croatia-Slavonia, Hungary, situated at the junction of the Save and Danube, opposite Belgrade, Servia (Map: Austria, G 4). Noteworthy edifices are the German theatre, and the ruined castle of Hunyady, the Hungarian hero, who died here in 1456. Semlin is the centre of the Turco-Austrian transit trade. Population, in 1900, 14,416.

SEMMERING, zêm'er-ing. A pass in the Semmering Alps, Austria, crossed by the railroad from Gloggnitz in Lower Austria (47 miles by rail southwest of Vienna) to Mürzzuschlag in Styria, a distance by rail of 33 miles. The

elevation of the pass is about 3300 feet. There was a bridle path over it as early as the beginning of the thirteenth century. The beauty of the scenery and the desirableness of the climate make this one of the most frequented of the health resorts in the Austrian Alps. The railway, the first of the great Continental mountain railways, and still considered a remarkable engineering feat, was completed in 1854. It has 15 tunnels and 16 viaducts.

SEMMES, sēmz, RAPHAEL (1809-77). An American naval officer, born in Charles County, Md. In 1832 he entered the United States naval service as a midshipman. He studied law, and was admitted to the bar in 1834, but remained in the navy. During the Mexican War he was the flag lieutenant under Commodore Connor of the Gulf Squadron, and commanded a shore battery at Vera Cruz. After the war he was made inspector of lighthouses, became commander in 1855, and in 1858 was secretary of the Lighthouse Board. He resigned from the navy on February 15, 1861, and soon afterwards was commissioned by President Davis of the Confederate States to secure skilled mechanics and military supplies in the North. On April 18, 1861, he was commissioned commander in the Confederate Navy, and soon went to New Orleans to fit out the *Sumter*, which escaped from the port and captured seventeen prizes before she was blockaded in Tangier by two American ships in January, 1862. Semmes then sold the *Sumter*, and in August, 1862, at the Azores, took command of the *Alabama*, which became the most noted of the Confederate 'commerce-destroyers.' (See ALABAMA CLAIMS.) On June 19, 1864, the *Alabama* engaged the United States ship *Kearsarge* off the coast of Cherbourg, France, and was sunk. Captain Semmes was picked up by the English yacht *Deerhound*, was taken to England, and soon afterwards returned to the Confederate States. He was appointed rear-admiral and was placed in charge of the James River Squadron. When Richmond was evacuated, the ships were blown up, and Admiral Semmes was commissioned brigadier-general and put in charge of the defenses of Danville, Va. Upon General Lee's surrender, he joined Gen. Joseph E. Johnston, with whom he surrendered. While practicing law at Mobile, Semmes was arrested December 15, 1865, by order of Secretary Welles, on charges of treason, but was released by the third amnesty proclamation of President Johnson. He published *Service Afloat and Ashore During the Mexican War* (1851); *Campaigns of General Scott in the Valley of Mexico* (1852); *Cruise of the Alabama and Sumter* (1864); and *Memoirs of Service Afloat During the War Between the States* (1869).

SEMOLINA (It. *semolino*, grits, soup paste, small seed, diminutive of *semola*, bran, from Lat. *simila*, fine wheat flour), **SEMOLA**, or **SEMOLÉ**. A by-product in wheat-flour making, especially from hard wheats, being the particles retained in the bolting machine and used for thickening soups, for puddings, etc. It is widely used in the manufacture of macaroni, etc. It is also manufactured in considerable quantity, as it is a favorite food in Italy and France. Its average percentage composition is: water, 13.1; protein, 9.4; fat, 0.9; nitrogen-free extract (chiefly starch),

76.2; and ash, 0.4. See 'Manufacture of Semolina and Macaroni,' *United States Department of Agriculture, Bureau of Plant Industry, Bulletin 20* (Washington, 1902).

SEMPACH, zēm'pach. A small town of Switzerland, situated on the east shore of the Lake of Sempach, northwest of Lucerne. Population, in 1900, 1,926. At Sempach took place the second great conflict between the confederated Swiss cantons and the House of Hapsburg. The renewal of the strife was due chiefly to the encroachments of the Swiss upon Hapsburg territory. The Hapsburg army, led by Duke Leopold in person, consisted of 1000 horse and 1100 foot, while the Swiss are said to have numbered only 1,200 men. The latter won a complete victory, as is claimed, through the heroic self-sacrifice of Arnold von Winkelried (q.v.). Duke Leopold and 1100 nobles were slain. A chapel and a monument mark the battlefield.

SEMPER, zēm'pēr, GOTTFRIED (1803-79). A German architect. He was born at Hamburg, November 29, 1803, and after devoting himself to the study of law at Göttingen, took up architecture, principally under Gau at Paris. His travels in Italy, Sicily, and Greece led to his writings on the practice of polychromy by the Greeks, which aroused much discussion. In 1834, upon the recommendation of Schinkel, he was appointed professor of architecture in the Academy of Dresden. There he built the Royal Theatre, the new Synagogue, besides several private residences, and had just begun the New Museum, when his participation in the Revolution of 1849 compelled him to leave the city. He first went to Paris, and in 1851 to London, where his advice was of great weight in the reform of industrial art instruction, and in the organization of South Kensington Museum. In 1855 he accepted a call to the professorship of architecture in the newly organized Polytechnicum at Zurich, for which he designed the building. It is one of his masterpieces, simple and stately in style, and beautifully decorated, after his design. While at Zurich he also designed the railroad station, the Kurhaus at Baden, and the town hall at Winterthur. The theatre at Dresden, which had in the meanwhile been burned, was rebuilt after his plans in 1871-78, with increased splendor, under supervision of his son Manfred. In 1871 he was called to take part in the architectural reconstruction of Vienna, the Imperial Palace, the new theatre, and the two museums being allotted him. He died at Rome, May 15, 1879.

No architect of modern times was more thoroughly versed in the forms of the Italian Renaissance, and understood how to adapt them so well to present-day needs. His buildings are as harmonious in design as they are careful and excellent in detail. He was also a distinguished writer upon architectural subjects. Among his chief works are: *Ueber Polychromie und ihren Ursprung* (Braunschweig, 1851); *Wissenschaft, Industrie und Kunst* (ib., 1852); and his masterpiece, *Der Stil in den technischen und tektonischen Künsten* (Stuttgart, 1878). His plans and sketches were published after his death (Leipzig, 1881). Consult his biography by Lipsius (Berlin, 1880), and Hans Semper (Dresden, 1880).

SEMPER, KARL (1832-93). A German zoölogist, born at Altona. He studied at Würz-

and in 1858 he went to the Philippines, where he traveled until 1864. Returning to Germany, he taught at Würzburg, and in 1872 became director of the zoological museum and laboratory. In 1877 he gave a course of lectures at Boston which were afterwards published under the title of "Animal Life as Affected by the Natural Conditions of Existence" (New York, 1881). Semper's work as a systematic zoologist is embodied in his series of volumes on the zoology of the Philippines; as an embryologist he will be remembered for his work on the development of a fresh-water mollusk (*Ampullaria*); as a morphologist he actively advocated the theory of the derivation of the vertebrates from the annelid worms, a view now generally held. Still more important are his broad and original views on evolution as stated in his *Animal Life*. He also criticised Darwin's theory of circular coral reefs (atolls), his views having been confirmed by other later observers.

Semper's chief works, besides the *Animal Life*, are: *Die Philippinen und ihre Bewohner* (Würzburg, 1869); *Die Paläinische* (Leipzig, 1873); *Reisen im Archipel der Philippinen* ("Wissenschaftliche Resultate," part i., 1868; ii.-vi., 1870-96); "Beiträge zur Biologie der Oligochaeten," in *Arbeiten aus dem zoologisch-zootomischen Institut in Würzburg* (1877); "Das Urogenital-system der Plagiostomen," etc., in *Arbeiten*, etc., vol. ii. (1875). Semper was also the founder of the zoological periodical *Arbeiten aus dem zoologisch-zootomischen Institut in Würzburg* (1871-95).

SEMPILL, ROBERT (c.1530-95). A Scottish ballad writer, who wrote many broadsides in support of the Reformation in Scotland. For them consult: *The Sempill Ballads*, ed. by Stevenson (Edinburgh, 1872); and *Satirical Poems of the Time of the Reformation*, ed. by Cranston (Scottish Text Society, 2 vols., ib., 1889-93).

SEN, KESHUB CHUNDER (1838-84). A Hindu reformer and theist. He was born at Garifa, Bengal, and received a mixed native and English education. He came into prominence in connection with the Theistic Church of India or the Brahma-Somaj (q.v.), which he joined in 1857. In 1865 a division resulted, and the majority became known as the 'progressive Somaj' with Sen as the acknowledged leader. Although acknowledging the moral precepts of Christ, they demanded for India a Christ presented in Oriental form for the Hindu mind. In 1870 he visited England, where he was cordially received by scholars and ecclesiastics. When, in 1878, however, Sen, who had been one of the prime movers in the passage of the law against child marriage, permitted his daughter, thirteen years old, to wed the Rajah of Cutch Behar, he was deposed by some of his congregation and thenceforth his personal prestige declined. The dissenters formed the Sadhara or Cothetic Brahma-Somaj. In 1881 he celebrated what he called the birth of the New Dispensation, promulgating the teachings which he had imbibed from Ramakrishna (q.v.). He was the author of *Yoga, Objective and Subjective* (1884). Consult: Max Müller, *Biographical Essays* (London, 1884); Mozoomdar, *Life and Teachings of Keshub Chunder Sen* (Calcutta, 1887).

SENANCOUR, SE-BÛN K'ou', ÉTIENNE PIVERT DE (1770-1846). A French philosopher and litté-

ateur, remembered almost solely as the author of *Obermann*. He was born in Paris of a noble family ruined by the Revolution. He was sickly from childhood. Though destined to the Church, he escaped from the Seminary of Saint-Sulpice to Switzerland, with his mother's help, and married there. He returned to Paris after his wife's death, about 1800, and remained there in poverty, relieved at the last by a modest pension, till his death at Saint Cloud. His more noteworthy works besides *Obermann* (1804) are *Rêveries sur la nature primitive de l'homme* (1799), *De l'amour selon les lois primordiales* (1805), *Observations sur le génie du christianisme* (1816), and a feeble romance, *Isabelle* (1833). *Obermann* alone "has qualities which make it permanently valuable to kindred minds" (Matthew Arnold). In form a novel, it is in fact a series of melancholy reflections on nature and society, with the morbid sentiment of the romantic generation of 1830. Senancour found self-forgetfulness only in nature, his descriptions of which are often beautiful. *Obermann* is translated with a biographical and critical introduction by A. E. Waite (New York, 1903).

SENART, se-nâr', ÉMILE CHARLES MARIE (1847—). A French Orientalist, born at Rheims. He studied Sanskrit in Munich and Göttingen, and except for a short period of political activity devoted himself entirely to the languages and literature of India. His most famous work, *Essai sur la légende du Bouddha* (1875-82), advanced the theory that the tradition in regard to Buddha represents an old sun myth. Senart's other works include *Kaccayana et la littérature grammaticale du Pâle* (1871), *Les castes dans l'Inde* (1896), and an edition of the *Mahavastu* (1892-98).

SENATE. The name commonly applied to the upper chamber of a legislative body. See GOVERNMENT SECTIONS under UNITED STATES; FRANCE; ITALY; SPAIN. See also CONGRESS; COMMITTEES.

SENATOR, zâ-nâ'tôr, HERMANN (1834—). A German physician, born in Gnesen and educated in Berlin. He became professor of clinical medicine at Berlin and principal physician of the Augusta Hospital in 1875, and six years afterwards directing physician in the Charité Hospital. His works are: *Untersuchungen über den fieberhaften Prozess und seine Behandlung* (1873); *Die Albuminurie im gesunden und kranken Zustande* (1881 and 1890), *Die Krankheiten des Bewegungsapparats und Diabetes mellitus und Insipidus* (1879); and *Die Erkrankungen der Nieren* (1895).

SENATORIAL COURTESY. The term applied to a custom in the United States Senate by which the procedure of that body is based chiefly on the honor of Senators rather than upon strict rules such as exist in the House of Representatives. Thus it is a part of Senatorial courtesy that a member shall not be interrupted in the course of a speech on the ground that his time has expired, but may speak without limit. It is a part of the same custom that personal requests of Senators, as for the immediate consideration of a favorite measure, shall be granted. It has also come to be a part of Senatorial courtesy that the Senate will refuse to confirm the nomination of an appointment to office in a State

whose Senators object to the person nominated. The result of this unwritten rule often makes it necessary for the President to consult beforehand with the Senators from a State in which he is called upon to make an appointment.

SENCI, sãn'sé. A warlike tribe of Panoan stock (q.v.), occupying the hill country east of the Ucayali River, about Sarayaen, Northeastern Peru. They are described as among the greatest warriors of the Ucayali region, and bold and generous in disposition. Their weapons are the bow, lance, club, and *koras*, a sort of combined club and stabling instrument. They are agricultural and very industrious.

SENDAI, sãn'di'. The capital of the Prefecture of Miyagi, Japan, situated near the eastern coast of Hondu, 217 miles by rail north of Tokio (Map: Japan, C 4). It is noted as the former seat of the Daimyo Date Masamune (1567-1636), who sent an embassy to the Pope and the King of Spain in 1614. His castle, somewhat damaged during the revolution of 1868, is now used by the garrison. The principal products are ornamental articles of fossil wood, found in the vicinity, and cloth. Population, in 1898, 83,325.

SEN'ECA. One of the leading tribes of the Iroquois (q.v.) confederacy. The popular name is foreign to the tribe and of uncertain origin. They call themselves *Tshoti-nondawaga*, abbreviated *Nondawaga*, 'people of the hill,' and were formerly known to the French as *Tsonnouthowan*. In the Iroquois councils they were officially designated as the 'doorkeepers,' in allusion to their guarding the western 'door' or frontier of the confederacy. The Seneca were the ruling spirits of the Iroquois league in the west, as the Mohawk were in the east, and the wars waged with the Huron, Neutral Nation, Erie, and Illinois, as well as with the southern tribes, were carried on chiefly by them. When first known they occupied that part of western New York between Seneca Lake and the Genesee River, having their council fire at *Nundawao*, near the present Naples. After the destruction of the Erie and Neutral Nation about 1650-60, the remnants of these tribes were chiefly incorporated with the Seneca, who soon spread over the conquered territory westward to Lake Erie and southward along the Allegheny. By these accessions they became the largest and most important tribe of the confederacy. They sided with the English in the Revolution, for which their villages and fields were wasted by Sullivan in 1779, but did not abandon their country, and are still residing mainly within their original territory in New York State. The estimate of 3250 in 1778 remains practically the same to-day, viz. 2710 upon Cattaraugus, Allegheny, and Tonawanda reservations, New York; 345 (mixed with Cayuga, etc.) attached to Quapaw agency, Indian Territory; and an estimated 200 with the other Iroquois on Grand River reservation, Ontario. See IROQUOIS.

SENECA, ANNEUS. A Roman rhetorician, born at Corduba (Cordova), in Spain. The time of his birth is doubtful, probably not later than B.C. 54. He seems to have been in Rome during the early period of the power of Augustus. He was rich, belonged to the equestrian order, and enjoyed the friendship of many distinguished Romans. The time of his death is uncertain; but

he lived perhaps until A.D. 39. His extant works are *Controversiarum Libri V.*, a collection of imaginary law cases for practice in discussion, and *Suasoriarum Liber*, a collection of 'themes,' neither of which is complete. The best editions are those of Kiessling (Leipzig, 1872) and Müller (Prague, 1887).

SENECA, LUCIUS ANNEUS (c. 1 B.C.-A.D. 65). A celebrated Roman Stoic philosopher, the son of Anneus Seneca, born at Corduba about B.C. 4. When a child he was brought by his father to Rome, where he began the study of eloquence. He cared more, however, for philosophy, in which his first teacher was the Pythagorean Sotion, whom he afterwards left to follow Attalus the Stoic. He traveled in Greece and Egypt, and pleaded in courts of law; but, notwithstanding his forensic triumphs, he left the bar from fear of Caligula's jealousy. He filled the office of quaestor, and had already risen high in the favor of the Emperor Claudius, when he was accused of an intrigue with Julia, the daughter of Germanicus, and wife of Vinicius. He was exiled to Corsica, where he remained for eight years, deriving from philosophy what consolation he could, while incessantly appealing to the Emperor for pardon. When Claudius married Agrippina, Seneca was recalled by her influence, raised to the praetorship, and appointed instructor of her son Nero. On the death of his governor and military tutor, Burrus, Nero gave way to his depraved passions with a force which Seneca could not control. All his influence over his pupil was lost, but he profited by his extravagant bounty to such a degree that his accumulated wealth amounted to 300,000 sesteritia, or about twelve million dollars of our money. Seneca, to avert dangerous consequences, offered to refund to the Emperor his gifts, and begged leave to retire on a small allowance. This Nero declined; and Seneca, under pretense of illness, shut himself up, and refused to appear in public. Nero then attempted to have him poisoned, but failed. A short time afterwards Antoninus Natalis, when on his trial for participation in the conspiracy of Piso, implicated Seneca as one of the conspirators. He was sentenced to put himself to death. His wife, Paulina, declared her resolution to die with him, and, in spite of his remonstrances, accompanied him into the bath in which, according to his own choice, he was to be bled to death. The Emperor, however, would not allow Paulina to die, but removed her from her husband, who gradually expired.

Seneca's extant writings are mainly on moral subjects, and consist of epistles, and of treatises on Anger, Consolation, Providence, Tranquillity of Mind, Philosophical Constancy, Clemency, The Shortness of Life, A Happy Life, Philosophical Retirement, and Benefits. He also wrote seven books entitled *Questiones Naturales*. Ten tragedies, ascribed to him by Quintilian, and generally included in editions of his works, have also come down to us. They were not intended, and are certainly not adapted, for the stage. They are overcharged with declamation, and wanting in dramatic life. They are of importance in dramatic history on account of the great influence they exerted on Renaissance and French classical drama. Of his genuine prose writings modern opinion takes a divided view, some critics praising his practical sagacity, others finding him

ive leach. The *Apostolically* ascribed to him, is an on the deceased Emperor Claudius. The *apodolantos*, 'pumpkinification,' is coined humorously for *apothosis*, 'deification.' It is published in Bücheler's *Petronius* (Berlin, 1882), and edited by Ball (New York, 1903). The larger works are edited by Haase (Leipzig, 1893-95), and by Hosius (ib., 1899). The tragedies were edited by Holtze in the Tauchnitz series (ib., 1872).

SENECA FALLS. A village in Seneca County, N. Y., 42 miles west of Syracuse; on the Seneca River and the Seneca and Cayuga Canal, and on the New York Central and Hudson River and the Lehigh Valley railroads (Map: New York, D 3). It has the Mynderse Academy, a public library, and the Johnson Home for Indigent Females. Cayuga Lake Park, three miles distant, is a summer resort of some prominence. Seneca Falls is situated in a rich farming region, and manufactures pumps, hydraulic and foot power machinery, fire engines, hook and ladder trucks, woolen cloth, and advertising novelties. Seneca Falls was settled in 1791, and was incorporated in 1831. Population, in 1890, 6116; in 1900, 6519.

SENECA LAKE. The largest and deepest of the group of elongated lakes in west-central New York (Map: New York, D 3). It is 37 miles long and from 1 to 4 miles wide, and its greatest depth is about 630 feet. Its shores are bold, and the surrounding country is picturesque. It receives the waters of Keuka Lake, and discharges into Lake Ontario through the Seneca and Oswego Rivers. It is navigated by steamers, and connected by canals with the Erie Canal and Chemung River.

SENECIO, sē-nē'shī-ō. A genus of plants of the natural order Compositae. The species, of which nearly one thousand have been described, are mostly herbs individually restricted in range, but generically of almost world-wide distribution, and especially abundant in temperate climates. Some species are used for fuel; others were formerly reputed useful for wounds; several species, especially *Senecio cineraria* (dusty miller), *Senecio mikanioides* (cape ivy), and *Senecio argenteus* (silvery senecio), are widely popular ornamental plants.

SENECÚ, sē'ná-kōō'. A village in Chihuahua, Mexico, on the south bank of the Rio Grande, about 7 miles below El Paso, occupied by a remnant of the Piro Indians (q.v.), a former Pueblo tribe of New Mexico. Although the population is entirely Catholic and Spanish is the ordinary language, the old tribal organization is still kept up, with a cacique, governor, war chief, and other officers. The Senecú retain also some degenerate Pueblo dances, with the Indian drum and rattle, together with the pottery art, the foot races, and rabbit hunts of their Pueblo kindred. One or two old persons yet remember something of the language. Population, in 1903, about 60.

SENEFELDER, zē'nē-fēld'ēr, ALOYS (1771-1834). The inventor of lithography. He was born at Prague, Bohemia, but was early taken to Munich, where he became an actor. He then turned his attention to printing, and invented the process of printing from stone known as

lithography (q.v.). After unsuccessful attempts to found establishments in Munich, Offenbach, and Vienna, he returned to Munich and accepted the position of inspector of maps at the royal printing office, continuing his private establishment as well. In 1826 he invented the process of lithography in colors, and in 1833 perfected it so that he could print the colors on linen, thus imitating oil painting. He wrote a *Lehrbuch der Lithographie* (1818), which was translated into French (1819); and *Behandlung des Ueberdrucks auf der kleinen lithographischen Handpresse* (1824). Consult: Nagler, *Aloys Senefelder und Simon Schmidt als Rivalen* (Munich, 1862); Pfeilschmidt, *Aloys Senefelder* (Dresden, 1877); Seamoni, *Aloys Senefelder und sein Werk* (Saint Petersburg, 1896).

SENEFFE, sē-nēf'. A small village in the Province of Hainault, Belgium, 22 miles southwest of Brussels. The district has extensive manufactures of pottery and glass. Near by is the battle-field on which William of Orange, at the head of the force of the coalition against France, was defeated, after a bloody contest, by Condé, August 11, 1674.

SENEGAL, sē-nē-gal' (Fr. *Sénégal*). A river of the French colony of Senegal, on the southwestern border of the Sahara (Map Africa, C 3). Its principal headstream, the Bafing or Black River, rises in the mountains of Futa Jallon, near the sources of the Niger, and flows north till it is joined by the Bakhoi or White River, at Bafulabe. The combined stream then flows generally northwestward and empties into the Atlantic Ocean, at Saint Louis, 110 miles north of Cape Verde. It is the first perennial stream for a distance of 1300 miles south of Morocco, and marks the northern limit of the rain zone. Its length is about 1000 miles. The upper course forms during the wet season a series of rapids as it descends over rocky ledges which in the dry season are converted into dams separating the river into a series of reservoirs. Below the confluence of the headstreams the river descends from the plateau in the Falls of Guine and Felu, each about 50 feet high. In its lower course it flows through a narrow but low and level and very fertile alluvial plain, in which it frequently divides to form large elongated islands which are flooded during high water. Near its mouth the river forms a large delta with numerous branches, which, however, do not enter the ocean directly, but flow into a long, narrow coast lagoon cut off from the sea by a bar of sand. Through the latter there is a shifting opening which is very difficult and dangerous to enter. The Senegal is navigable to the Felu Falls, and there is a regular service in the rainy season to Kays, 460 miles, whence a railroad has been built to Bafulabe and is being extended to Bamaku on the Niger. The Faleme, the principal tributary, is also wide and deep, and navigable over 100 miles. Consult Ancelle, *Les explorations au Sénégal* (Paris, 1887).

SENEGAL. A French colony in West Africa, extending along the coast from Cape Blanco to the northern boundary of Portuguese Guinea, excluding the British colony of Gambia (Map: Africa, C 3). In 1902 the part east of Kays, comprising the protected States along the upper Senegal and the Middle Niger, was detached from Senegal and was constituted a separate division

of French West Africa under the name of the Senegambia and Niger Territory. Since, however, this region is still for the most part only nominally under the French rule, and as its economic development is so closely connected with Senegal proper, it is deemed advisable to apply the name of Senegal in this article to the entire territory between the Atlantic and the Military Territories of French Sudan. The area of Senegal proper is estimated at 80,000 square miles. There are no reliable figures for the rest of the country.

The region, as far as it is known, is without any prominent elevations. The coast district is mostly flat and sandy and most fertile in the valley of the Senegal. The northern part belongs to the region of the Sahara, while the portion south of the Senegal is densely wooded and better watered. In the interior elevations of nearly 2000 feet are occasionally met with. The western part is drained by the Senegal, whose main head-stream is the Bafing, and which receives the Falemé from the south and the Kulu from the north. The Falemé is navigable. The portion south of Gambia is watered by the Salum and the Casamance.

The climate of Senegal is on the whole unhealthful. The year is divided into two seasons. The rainy season begins at the end of May at the mouth of the Casamance, and in the middle of July at Saint-Louis. During the dry season the temperature at Saint-Louis occasionally falls as low as 46°, but during April and May the north-eastern wind from the Sahara not infrequently raises it to over 110° in the shade. Yellow fever often comes with the rainy season. The flora of the northern part is on the whole scanty, but abounds in gummiferous acacia. In the valley of the Senegal the vegetation is luxuriant and the region south of the river is especially rich in palms.

In the centre of the colony are vast steppes, suitable for grazing. Earthnuts, which form at present the principal export of Senegal, are grown along the coast, and kola nuts are found along the rivers in the south. The natives also raise millet for local consumption. Senegal is developing very rapidly and promises to be a successful colony. A large increase is shown in the exports. The natives produce some textiles, and metal ware, characterized by more or less skill.

The imports have grown from \$5,456,000 in 1895 to \$12,366,274 in 1901, and the exports from \$2,400,126 to \$7,373,635. Over one-fourth of the imports consists of cotton goods. Earthnuts form over one-half of the exports, and gum and rubber over one-tenth. The chief waterway of the colony, the Senegal, is navigable during the rainy season as far as Kays, 460 miles from its mouth. Saint-Louis, the capital, is connected by a railway line (163 miles long) with Dakar, the chief seaport of the colony. Another line from Kays, the head of navigation on the Senegal, to Bamnaku on the Niger is in course of construction.

The local budget of the colony for 1903 balanced at over \$1,000,000. The Governor-General of French West Africa, of which Senegal is one of the colonies, is assisted by a privy council of officeholders and a general council of 20 elected members. The colony is represented by a Deputy in the French Chamber of Deputies. The internal administration differs in various parts in accordance with the degree of subjuga-

tion of tribes. The communes of Saint-Louis, Gorée, Dakar, and Rufisque—on the coast—are organized like the French communes, but elsewhere the rule of the natives, especially in the northern part, is little interfered with. Estimates place the population at over 2,000,000, including the population of the Senegambia and Niger Territory. The inhabitants are composed of two races, the Moors and the negroes. The Moors inhabit principally the northern part of Senegal and are divided into the three tribes of Trarza, Brakna, and Dniash, and have adopted many traits of their negro subjects, with whom they have largely intermixed. They are engaged principally in the gathering of rubber and transportation and are believed to number about 80,000. The most numerous of the negro tribes are the Yolets, who inhabit the coast region. Their number is put at 400,000. They are characterized by a fine physique and a peaceful disposition, and their religion is a corrupt Mohammedanism. The Serers, an inferior negro race, are found principally in the region of Baol, near the coast. The Bambaras are a mixed race, inhabiting the region of Kaarta, north of the Senegal. The Fulahs are found all over the region. The Toucouleurs are a warlike tribe of mixed origin inhabiting the left bank of the Senegal. They are zealous Mohammedans and number over 200,000. There are also the Diolaks and the Balantes, the latter being found principally along the Casamance River. The principal settlements are Saint-Louis (q.v.); the capital, Dakar (q.v.); Bakel, a fortified post on the left bank of the Senegal, about 350 miles southeast of Saint-Louis; Bamnaku, a fortified post and commercial centre on the Niger, and the proposed terminus of the railway line from Kays; Kays, with a population of about 9000; Rufisque (8000 inhabitants), a railway station near Dakar; and Medina (8000 inhabitants), a railway station near Kays.

The Senegal was discovered by navigators from Dieppe in the fourteenth century. In 1582 a French company established a factory at the mouth of the Senegal, which became the town of Saint-Louis in 1626. The Dutch settlements along the coasts were acquired by the French through the Treaty of Nimègue in 1678. In 1758 the French possessions of Senegal were taken by the British and restored in 1783, but seized again in 1800 and 1809 and finally restored to the French in 1817. The Moorish tribes of the north, who showed the greatest resistance to the French rule, were pacified by General Faidherbe in 1860.

SEN'EGAM'BIA. A region in Western Africa. See SENEGAL.

SENESCENCE (from Lat. *senescere*, to grow old, from *senex*, to be old, from *senex*, old). The state of transition to old age. Old age, rapid decay, and a sudden collapse with death occur in many insects immediately after egg-laying. On the other hand, lobsters and crabs, oysters, and other mollusks lay eggs year

in the first twenty years. Certain animals live for a century. (See LONGEVITY.) As to the domestic animals that as old animals they become affected as in man, they lose their acuteness of hearing, become still in their limbs, and enter into a senile state.

In many forms of animal life senile characteristics become inherited in middle life. Hyatt has shown that in ammonites and other mollusks the species and type may arise as larval or immature forms, become mature, more or less specialized and ornamented, and then die out in a series of senile forms which recall those of the childhood of the type. (See GROWTH.)

Consult: Minot, "Senescence and Rejuvenescence," in *Journal of Physiology*, vol. xii. (1891); Hyatt, "Genesis of the Arctiidae," in *Smithsonian Contributions* (Washington, 1889); "Phylogeny of an Acquired Characteristic," in *Proceedings of the American Philosophical Society* (Philadelphia, 1894).

SENESCHAL, sən'ē-shāl (OF. *seneschal*, *senescal*, Fr. *senchal*, from ML. *senescalcus*, *seniscalcus*, from Goth. *sinirigs*, old; connected with Fr. Gael. *scan*, Lith. *scanas*, Lat. *senex*, Gk. *ἄσος*, *lenos*, Skt. *sana*, old + *shalks*, servant; connected with OHC. *scalc*, Ger. *Schalk*, AS. *scvalt*, obsolete Eng. *shalk*, servant). Originally probably an attendant of the servile class who had the superintendence of the household of the Frankish kings. In the course of time, however, the seneschalship rose to be a position of dignity, held no longer by persons of servile race, but by military commanders, who were also invested with judicial authority. The dignity of grand seneschal of France was the hereditary right of the dukes of Anjou. This office gave the right to command the armies in the absence of the King, control over the affairs of the King's household, and the exercise of supreme judicial authority. Philip Augustus, however, in 1191, suspended the judicial functions. The lieutenants of the chief feudatories of France often took the title of seneschal, and, as in the course of time the great fiefs were absorbed by the Crown, they were as a rule divided for judicial purposes into districts under the authority of royal officers, who retained the old name, while the districts were known as *sénéchaussées*. A similar office in England and Scotland was designated *steward*, but is rendered into Latin as *senescalcus*.

SĒNG- (or **SŪNG-**) **KO-LIN-SIN**, sēng'kō'-lĕn'sĕn'. A famous Mongol general, a prince of the Kortein tribe, who distinguished himself in connection with the advance in 1853 of the Taiping rebels, whom he defeated twice in battle. In 1860 he was chosen to oppose the advance of the Anglo-French punitive expedition to Peking, and is noted particularly in connection therewith for the great circular mud rampart with which he surrounded Tien-tsin at a distance of two miles, and still known to foreigners as 'Seng-kolin-sin's folly.' (See TIEN-TSIN.) In operating against the Nien-fei rebels in Central China in 1864 his army was overwhelmed by superior numbers and he was killed.

SENGO'RA. A seaport on the eastern coast of the Malay Peninsula, about 475 miles south of Bangkok (Map; Siam, D 6). Its harbor is spacious and well sheltered, and there is a considerable trade in fish, fruit, and tin. The popu-

lation is estimated at about 10,000. The Chinese founded a settlement here early in the nineteenth century.

SENIGALLIA, sā'nĕ-gāl'lĕ-ā, or **SINIGALLIA**, sĕnĕ-gā'lyā. A city in the Province of Ancona, Italy, at the mouth of the Misa, 16 miles by rail west-northwest of Ancona (Map; Italy, H 4). It is modern in appearance, having broad streets and well-built houses. It has a seminary, a technical school, and a library. The industries are silk-spinning, sugar-refining, and fishing. The famous annual fairs are still well attended. Senigallia was founded by the Senonian Gauls (whence the ancient name, *Senia Gallica*), and colonized by the Romans in B.C. 285. During the Middle Ages the Guelph and Ghibelline wars left the city in a ruined condition. At Senigallia on December 31, 1502, Cesare Borgia treacherously put to death a number of nobles of the Papal States whom he had enticed there under a pretext of concluding peace. In 1521 the town became a Papal possession. Population (commune), in 1901, 23,156.

SENILITY (from Lat. *senilis*, belonging to old age, from *senex*, old). The period of old age. In man the decline of life and the approach of old age is marked by special physiological conditions and pathological changes. There is no death from old age. In all cases some lesion is found which points the way to the cause of death. (See PATHOLOGY.) That is, some pathological change is always present which interferes with proper functioning. There are probably no cases of old age in which arteriosclerosis (q.v.) is not present. The senile kidney is a source of great danger. The respiratory apparatus of the aged is always enfeebled. Bronchitis is very common, with resulting emphysema (q.v.), and chronic disseminated pneumonia frequently is in evidence at autopsies upon the aged. Fevers easily supervene upon infections from the digestive or urinary tracts. Especially during fevers do the respiratory phenomena of the aged become patent. In the field of cardiac disorder there is always a tendency to asystole, or failure of complete contraction of the walls of the heart—a condition which occurs with considerable frequency at death. The nerve functions are all diminished. Sensibility, both general and special, is decreased, as are also the nerve reactions. The aged person is especially liable to traumatism, because of lessened muscular tone as well as decided fragility of the bones. Fractures of bones are frequent, and frequently aged broken bones fail to knit. The aged patient, also, bears very badly the immobilization necessary after fracture of the thigh. Atrophy and digestive disorders result very promptly, and the function of the kidneys is much altered by enforced rest. The lungs are easily invaded by hypostatic congestion. Of special diseases, gout and rheumatism are very frequent in the aged. They are also more liable to the infection of erysipelas. Epidemic influenza, or *grippe*, is accompanied by greater prostration, is frequently marked by general adynamia and often by cardiac atony. The pulmonary features of the disease are less evanescent than in the adult, though perhaps less acute. Typhoid fever is frequent in the aged, and begins very insidiously. Their most frequent gastric affection is cancer. Apoplexy is a very common

cause of death in old age, and cerebral softening is not uncommonly produced by the lesions of chronic endarteritis.

The precautions to be taken against the rapid advance of age include avoidance of alcohol during one's whole life; moderate eating, especially after the age of forty; moderate exercise after the age of sixty is reached, or after senescence has begun to manifest itself; avoidance of strain, physical or mental; avoidance of worry, anger, and grief; proper clothing for all seasons and conditions, and other avoidance of exposure; together with out-of-door air.

Senility is a race character. The lower or backward races mature at the age of eighteen to twenty-two, while the white race does not stop growing until the age of thirty. Some of the races which have rapidly faded away in contact with civilization had probably already entered into a senescent state. Woman outlives man. At the age of eighty, three women are living to one man, although they mature earlier than men. See LONGEVITY.

SENIOR, NASSAU WILLIAM (1790-1864). An English economist, born in Berkshire. He was educated at Eton and Magdalen College, Oxford, where he graduated in 1811, taking a distinguished first-class in classics. In 1819 he was called to the bar at Lincoln's Inn. In 1825 he was elected to the Drummond professorship of political economy at Oxford. He held it for the statutory term of five years. In 1832 the enormous evils of the poor-law administration in England led to the appointment of a commission of inquiry. Senior was one of the commissioners, and the portion of the report in which the abuses of the existing system were detailed was drawn up by him. This report encouraged the Whig Government to bring in the Poor-Law Amendment Act of 1834. In 1836 he received the appointment of master in chancery, and in 1847 was re-elected to his former professorship for another term of five years. He served on numerous important commissions in his later years. His "Outline of Political Economy" was originally published in the *Encyclopædia Metropolitana* (1850). In this work and in various essays he developed the economic doctrines laid down by Ricardo and the free-trade school with much felicity of expression, which entitles him to rank as the foremost economist between Ricardo and Mill. Senior was the first writer to demonstrate clearly the subjective ground of interest payment ('abstinence' in Senior's language). His analysis of monopoly is the most important contribution of the classical school to the theory of that subject.

SENKOVSKI, sên-kôf'skê, OSSIP IVANOVITCH (1800-58). A Russian Orientalist and historian, born near Vilna, and educated in that city. He was professor of Oriental languages in the University of Saint Petersburg from 1822 to 1847, founded in 1834 a periodical called *The Reader's Library*, and in it, and in the *Son of the Fatherland*, published several novels under the pseudonym Baron Brambens. He translated Morier's *Hajji Baba* (2d ed. 1845), and wrote *Collectanea*, a series of selections from Turkish authors on the history of Poland (1824-25), and *Supplément à l'histoire des Huns, des Turcs et des Mongols* (1824).

SENLAC, BATTLE OF. See HASTINGS.

SENLIS, san-lês'. The capital of an arrondissement in the Department of Oise, France, 33 miles north by east of Paris, on the Nonette River (Map, France, 12). Its walls, erected in the Gallo-Roman period, are still in good condition, and there are also in the vicinity the ruins of an old Roman amphitheatre. The Gothic Cathedral of Notre Dame dates from the twelfth century. The twelfth-century Church of Saint Flandbourg, the sixteenth-century Church of Saint Pierre, and the College of Saint Vincent, with its twelfth-century abbey church, the town hall, and the archaeological museum are also noteworthy. A treaty was concluded here in 1493 between Maximilian and Charles VIII. of France, by which the former recovered Aitons and Franche-Comté. Population, in 1901, 7,115.

SENN, Victorias (1844—). An American surgeon, professor of the practice of surgery and of clinical surgery in Rush Medical College, Chicago, Ill. He was born in Buchs, Switzerland, and came to the United States in 1853, settling in Ashford, Wis. After a high school education and some experience in teaching he began to study medicine, and graduated from the Chicago Medical College in 1868. He also graduated in medicine at Munich in 1878. He served as house physician in the Cook County (Ill.) Hospital, in 1868-69; practiced medicine in Fond-du-Lac, Wis., in 1869-74; in Milwaukee, Wis., in 1874-93; and was professor of the principles and practice of surgery at Chicago College of Physicians and Surgeons in 1884-87, and since 1888 he has been professor of the same branch of surgery in Rush Medical College, and since 1893 has practiced in Chicago. He served as surgeon-general of Wisconsin, and as surgeon-general of the National Guard of Illinois, as attending surgeon to the Presbyterian and Saint Joseph's Hospitals in Chicago. At the outbreak of the Spanish-American War Dr. Senn was appointed chief surgeon of the Sixth Army Corps with the rank of lieutenant-colonel of volunteers, and chief of the operating staff in the field. He served till September, 1898. Dr. Senn is a member of many medical associations in the United States as well as in foreign countries. Among his contributions to literature are: *Varicocèle* (1878); *Experimental Surgery* (1889); *Intestinal Surgery* (1889); *Surgical Bacteriology* (1889); *Principles of Surgery* (3d ed. 1901); *Syllabus of Surgery* (1892); *The Pathology and Treatment of Tumors* (1895); *Medico-Surgical Aspects of the Spanish-American War* (1900); *Practical Surgery for the General Practitioner* (1901).

SENNA (OF, *senne, sené, Fr. séné*, from Ar. *sana, sanna*, from *saana*, to make easy to open). The leaflets of *Cassia acutifolia* from Nubia and Upper Egypt, and of *Cassia angustifolia* from Southern Arabia; a brisk cathartic. *Cassia acutifolia* is a half-shrubby plant, about two feet high, with racemes of yellow flowers, lanceolate acute leaves, and flat elliptical pods, somewhat swollen by the seeds. It grows in the deserts near Assuan, and the leaves are collected by the Arabs and carried by merchants to Cairo for sale. The active principle of senna is a glucoside, cathartic acid. It acts effectively in about four hours, causing watery movements which contain some bile. It increases both the intestinal secretions and peristalsis, and may cause some griping. Excreted with the milk and other secretions

of the young child. Its best known preparation is a fine, white, licorice powder. See *Coloring and Paste of CARNATIONS, ETC.*

SENNACHERIB, sennak'éríb' (Bab. *Sennacherib*). Senn was increased the brother of King of ASSYRIA, B.C. 705-681. He succeeded his father, Sargon, and at the beginning of his reign had to deal with a revolt of the Babylonians, caused by Merodach-Baladan. The latter attempted to involve Hezekiah, King of Judah, in the revolt (II, Kings xx. 12-19). After defeating the Babylonians Sennacherib first proceeded against the Kassi and Elipi, and then turned his attention to the west. He captured Sidon and the cities dependent upon it, Ashkelon, Ekron, and neighboring cities, and defeated the Egyptians, who undertook to check his progress. The cities of Judah fell into his hands, one after the other, and Hezekiah was shut up in Jerusalem, but refused to surrender at the demand of the representative of the Assyrian King. At this juncture Sennacherib was obliged to return to Assyria, probably because of the conditions in Babylonia; but Hezekiah seems to have submitted to his general, as he forwarded to Nineveh a heavy tribute. There is some reason to think that there may have been a campaign against Syria and Egypt (II, Kings xix. 9-37) toward the end of Sennacherib's reign when a serious disaster befell the Assyrian army. Later Sennacherib undertook an expedition against Cilicia and Cappadocia. The trouble in Babylonia continued and Sennacherib finally destroyed the city entirely and exiled the inhabitants. In B.C. 681 he was assassinated by two of his sons and was succeeded by another son, Esar-haddon. Consult: Tiele, *Babylonisch-assyrische Geschichte* (Gotha, 1855); Rogers, *History of Babylonia and Assyria* (New York, 1900); the "Annals of Sennacherib," and the "Babylonian Chronicle," in *Klein-Schriftliche Bibliothek*, vol. ii. (Berlin, 1890); *Records of the Past*, new series, vol. vi. (London, 1892).

SENNAR, sèn-nâr'. A province of Egyptian Sudan (q.v.), situated between the White and Blue Nile, and extending from Khartum south to Fasokl, and known in a wider sense as Dar Sennar. The Province of Kordofan is on the west. The area of Sennar is unknown. It is essentially a plain with isolated mountains dotting its surface. In the southeast it becomes rougher, forming the approach to the Abyssinian highlands. The soil is alluvial and carries gold. Sennar is in the moist zone. The Khartum section of the country has little in the way of vegetation but grasses. In the South are forests. Among the usual trees found are the acacia and the tamarind. Lions, elephants, hippopotamuses, etc., abound. The bog ores yield a good grade of iron. No figures are given for the population, of which the negro race Funi (q.v.) forms a noteworthy part. This race came hither about the year 1500 from Central Africa, and founded the Sennar kingdom, which ceased to exist in 1821. The old capital, Sennar, on the Blue Nile, has about 10,000 inhabitants. It has suffered in the rise of Khartum. Wad Medina and Mesalamia, both on the Blue Nile, are important towns.

SENS, sãns'. An archiepiscopal city and the capital of an arrondissement in the Department of Yonne, France, 70 miles southeast of Paris, on the Yonne River (Map: France, K 31). The most

prominent edifice of the city is the cathedral of Saint Etienne. It dates from the twelfth century, but has undergone frequent restorations. It is of the Romanesque and Gothic styles of architecture, the latter being more generally used. The town hall, also a fine structure, has a museum of precious stones, an art gallery, and a library. Manufacturing is the leading industry, the chief products being fertilizers and farm implements. Population, in 1901, 14,962. Sens, the ancient *Agneticum*, at the time of Julius Caesar was one of the largest cities of Gaul and still has interesting Roman remains. It was made the seat of an archbishop in the eighth century. The see was changed to a bishopric in 1791, was suppressed in 1801, and was finally restored as an archbishopric in 1807. The Council of Sens which condemned Abelard and his teachings was held here in 1141.

SENSATION (OF, *sensacion*, Fr. *sensation*, from Lat. *sensatus*, possessing sense, from *sensus*, sense, feeling, from *sintire*, to perceive; connected with Ir. *sí*, Goth. *siþs*, AS. *sip*, journey, way, OLG. *sinunn*, to journey, Ger. *sinnen*, to perceive, think). A term in psychology connoting two distinct usages, an epistemological and a psychological. The psychological usage may itself be twofold, functional or structural, each usage bringing with it a peculiar set of problems. Logically, sensation is the first step in knowing; chronologically, it is the first manifestation of intellectual function. Obvious as this view appears, it will not bear the test either of a rigid epistemology or of accurate psychological analysis. Knowledge does not proceed from bare sensations to complex perceptions, in its advance from acquaintance with to knowledge about. If it is knowledge at all, it is judgment (q.v.); and the difference between simple and complex judgments is not the difference between sensation and perception. Neither are the intellectual functions built up, in the time order, from the juxtaposition or amalgamation of sensations into perceptions; where there is intellectual functioning, there is, from the first, the function of perceiving. Sensation has in reality no place, despite tradition and historical systems, save in a structural psychology.

Psychologically regarded, sensation is an elementary or simple mental process; it neither knows nor gives knowledge, it *is*. It is the product of analysis and abstraction; it never occurs alone, and never has occurred alone. Since, however, there is, according to certain psychologists, a second ultimate structural process, the affection (q.v.), we must define sensation more nearly. This may be done by enumerating its introspective differences from the affection, but is done most simply by aid of a psychophysical reference; a sensation, we may say, is an elementary mental process connected with (or conditioned upon) a bodily process within a special (specially differentiated) bodily organ. While such a definition is not as satisfactory, from the purely psychological standpoint, as a definition which should leave psychophysics out of account, it is a perfectly unobjectionable working formula, and has the special advantage of enabling us to bring our classification of sensations (distinction of senses) into relation with the definition of sensation.

Sensations cannot be classified otherwise than psychophysically. A statement of the introspec-

tive differences between a blue and a tone (e. g., must necessarily be cumbersome and analogical); whereas the mention of eye and ear is short and adequate. Psychology therefore follows the time-honored custom of referring sensation-systems, modalities or senses to the organs of sense.

Sensation in physiology is the perception by the mind of change wrought in the body. It is by means of sensation that the mind obtains a knowledge of the existence both of the different parts of the body and of the external world. The brain is the true organ of sensation, but besides this there must be perceptive organs for receiving and conducting tissues (nerves) for conveying impressions to the sensorium. Sensations are usually classed as *common* and *special*. Under the former head are included all sensations that cannot be localized in any particular part of the body, such as fatigue, discomfort, faintness, satiety, hunger, and thirst. In this class are also included irritations of the mucous membranes, of the respiratory tract that excite cough; the desire to defecate or urinate, and, in females, the sensations that precede parturition; and itching, tingling, burning, and aching. The muscular sense, by which muscular efforts are perceived and regulated, must also be considered as a common sensation. *Special sensations* are five in number: touch, taste, smell, hearing, and sight. An important distinction between common and special sensations is that by the former certain changes in various portions of the body are perceived, while from the latter knowledge of the external world is gained in addition. It is to be remembered that the seat of sensation lies in the brain and not in the special organs, although it is commonly said that we hear with the ear, see with the eye, etc., whereas in reality these organs merely receive impressions.

Objective sensations are those excited by some object in the outside world; *subjective sensations* originate within the brain itself. Through habit the mind is accustomed to connect all sensations with external causes, and this difficulty of separating objective and subjective sensations often gives rise to illusions. These may be aural, optical, or tactile, and are strikingly exemplified in the various forms of delirium.

Certain disorders of sensation affect the nerves both of common and special sensation. These may be roughly classified as hyperaesthesia, anaesthesia, and paraesthesia. Hyperaesthesia is an increased sensibility to painful impressions. It is seen in its most severe form in gunshot wounds of the nerves, and is a constant accompaniment of neuritis. Anaesthesia is a loss of sensibility complete or partial, and is produced by contact with various drugs (see ANAESTHETICS), exposure to cold, and certain disorders of the nervous system. Paraesthesia is a manifestation of disturbed sensation characterized by a number of subjective sensations such as numbness, prickling, tingling, and burning. It may affect any part of the body surface, and occurs in a wide variety of nervous diseases. See NERVOUS SYSTEM AND BRAIN.

York, 1899); id., *Experimental Psychology* (ib., 1901).

SENSATIONALISM (sometimes called **SENSUALISM**). A term used to designate the theory that the total content of consciousness is of sense origin; that all the higher activities of mind, such as judgment and reasoning, are the results left by the impressions originally made upon the *tabula rasa* of the mind by external objects. These impressions, at first unconnected, are supposed to have entered into mutual relation by virtue of the laws of association (see ASSOCIATION OF IDEAS). Among sensationists are to be mentioned the Sophists (qv.) of antiquity, and June (qv.) and Condillac (qv.) and their followers in modern times. Locke is a sensationist with large infusion of rationalism (qv.) in his doctrines. The classic expression of the principle of sensationalism is given in the Latin sentence, *Nihil est in intellectu, quod non fuerit in sensu*. See KNOWLEDGE, THEORY OF.

SENSE AND SENSIBILITY. A novel by Jane Austen (1811). Two sisters, Elmer and Marianne Dashwood, illustrate these two qualities, the course of the story showing the effects of suffering on the impulsive, uncontrolled nature of one and on the sedate, unselfish disposition of the other. The too evident purpose trumps the story, which contains some excellent characterizations, as Mrs. Dashwood, her selfish son, the commonplace Middletons, and vulgar but kind Mrs. Jennings.

SENSE ORGANS. See NERVOUS SYSTEM, EVOLUTION OF THE.

SENSES, SENSIBILITY. See SENSATION.

SENSITIVE BRIER. See SENSITIVE PLANT.

SENSITIVE PLANT. A common name of certain species of Mimosa, so called on account of the irritability (qv.) of their leaves. Those species which are most irritable are herbaceous or half-shrubby plants with beautifully divided pinnate leaves. The leaflets close upward in pairs when touched, and on repeated or rough touching the leaflets of the neighboring pinnæ also close together, become depressed, and lastly the whole leaf hangs as if withered. If the stem is shaken, all the leaves exhibit the same phenomena. After a short time the leaf-stalk rises, and the leaflets expand again. On account of this curious and interesting property, some of the sensitive plants are frequently cultivated in hothouses. The same faculty is possessed by the sensitive brier (Schrankia), two or three species of which are indigenous to the Southern United States, and also by the stamens and styles of many plants, especially of certain cacti. By extension, all plants which respond to contact stimuli are said to be sensitive, and in the widest sense all plants may be included. Some plants exceed in sensitiveness the sense organs of the human body.

SENSITIVITY (from *sensitive*, from OE., Fr. *sensitif*, from Lat. *sentire*, to perceive). A term used in psychophysics, meaning 'the bare capacity of receiving and communicating sensations.' It is subdivided into *modal* sensitivity (having reference to a whole sense department) and *sensibility* (having reference to individual sensations). Modal sensitivity is measured by the number of sensations possible to a given sense, e.g. the ear's modal sensitivity is given by 11,000, the number of distinguishable tone quali-

ADDITION.—Since sensations may be differentiated with regard to their different aspects, attributes (quality, intensity, extent, and duration), we can further speak of a *qualitative*, *intensive*, *extensive*, and *temporal* sensibility. (See **LIMEN**.) Consult: Fechner, *Vorles. der Psychophysik* (Leipzig, 1880); Kuelpe, *Outlines of Psychology*, translated (London, 1895).

SENSORIUM (Lat., sense or organ of sensation). The collective organ of sensation or perception. The cortex or gray matter of the brain, with the important ganglia at its base, is usually meant by this term in modern psychology.

It was long attempted to determine some one point in the brain where the soul is especially located or centralized, and to this point the name of sensorium was applied in the older psychological speculations. The fancy of Descartes made it a small body near the base of the brain, called the pineal gland. The recent views of the nervous system repudiate the idea of a central point of this nature; in consciousness the brain generally is active, although under different impressions and ideas the currents may be presumed to follow different nerve tracks. Consequently no meaning is now attached to a sensorium in psychology, as distinct from the cerebrum at large. See **NERVOUS SYSTEM AND BRAIN**.

SENTENCE (Lat. *sententia*, opinion, from *sentire*, to perceive). In grammar, an expression of articulate speech, either oral or written, which is, in the judgment both of the speaker and hearer, an organic whole. The sentence is divided into two parts, the subject and the predicate. The subject is that of which something is predicated; the predicate is that which is stated or asked concerning the subject. It is, however, possible to have a sentence in which the predicate, or, more rarely, the subject is suppressed, if it may be readily supplied by the hearer, or is present in the mind of the speaker. This usage is characteristic of the interrogative, imperative, and exclamatory types, and some scholars deny that such sentences which contain no expressed subject or predicate are real sentences. On this view the most primitive form of sentence is probably the assertive or predicative, as *He comes*. From this type was developed the dubitative or potential sentence, *Perhaps he comes*, and the interrogative type, *Does he come?* Here may be seen the subjectless sentence in such an expression as *Come!* with the answer, *Not he*, or (*Is he coming?*) with the answer, *No, she*. The question of the origin of the imperative type of sentence, as *Stop! John!* is a difficult one. It seems on the whole most probable that this was the most primitive of all forms of the sentence, for it must be borne in mind that the imperative mood and the vocative case were originally mere interjections, the most primitive of all forms of speech. (See **INTERJECTIONS; LANGUAGE**.) Evidence seems to show that there is in the so-called single-membered sentence, even in its earliest form and occurrence, an ellipsis of one of the two members. The cry of an animal is in a sense a predicate to which the subject is supplied by the hearer.

The relation of the subject matter of a sentence to its verbal form is studied most explicitly in logic, where propositions are classified according to the nature or degree of their predications.

The proposition, in best usage, is the verbal expression of the judgment which is a mental act. The main differentiations of propositions in traditional logic are into affirmative and negative—*He comes, He does not come*;—and into categorical, hypothetical, and disjunctive—*He comes, If he comes we shall see him, He may or he may not come*. The logical elements of a predication, the subject, copula, and predicate, correspond very closely to the grammatical elements of the sentence, and seem to furnish a basis in the nature of reasoning for the analysis of grammatical forms. In certain modern logical developments, however, theories of judgment consider all propositions as predicates whose subject is reality or the orderly system of human knowledge. According to this view, there is a tacit predication in every complete expression, in the interjection as well as in the categorical affirmation. Propositions, or rather judgments, are then graded upon a psychological scale of belief and certainty—the interjection represents the inevitable and unquestioned; the categorical affirmative (or negative) represents a conclusion of certainty after doubt; the hypothetical proposition represents a generalized case, which is certain, provided the hypothetical element be granted or occur; and the disjunction is a predication of uncertainty within the limits covered by the subject matter of the proposition. All grammatical forms of the sentence are thus more or less elaborate analyses of complex mental states in which each verbal unit represents an abstract of some quality, or predicate of the subject matter of thought. The simplest states are reflected in the single-membered sentence, while the more advanced and involved states necessitate various types of verbal complication.

Sentences are furthermore classed as simple, compound, and complex. The simple sentence consists of a single subject and a single predicate, as, *He comes*. The compound sentence is composed of two or more subjects and predicates, either of which sets forms in itself a simple sentence, and whose parts are normally connected by a conjunction (q.v.), as *He comes here and he goes home*. The complex sentence is either a simple or compound independent sentence, part of which is modified by a dependent sentence, normally introduced by a pronoun (q.v.), but not forming by itself a simple independent sentence, as *He who wishes comes, and he who is eager that more may come goes that he may call them*. The compound or paratactic type of sentence is almost certainly more primitive than the complex or hypotactic sentence. Consult: Delbrück, *Vergleichende Syntax der indogermanischen Sprachen*, vol. iii. (Strassburg, 1900); id., *Grundfragen der Sprachforschung* (ib., 1901); Wundt, *Völkerpsychologie*, i., "Die Sprache," (Leipzig, 1900); id., *Sprachgeschichte und Sprachpsychologie* (ib., 1901; Gabelentz, *Sprachwissenschaft* (2d ed., ib., 1901); Paul, *Prinzipien der Sprachgeschichte* (3d ed., Halle, 1898); Jacobi, *Compositum und Nebensatz* (Bonn, 1897); Hermann, *Gab es im Indogermanischen Nebensätze?* (Gütersloh, 1894); Miklosich, *Subjektlose Sätze* (Vienna, 1883); Sigwart, *Impersonalien* (Freiburg, 1888); Kimball, *Structure of the English Sentence* (New York, 1900). For the legal aspect, consult Bosanquet, *Logic* (London, 1888).

SENTENCE (in law). In its broadest legal sense, a judgment or decree of a court or judge; specifically and technically, a decision in a criminal case, which is called *final* when it determines the entire case, and *interlocutory* when it determines only some point incidental to the progress of the case.

When a sentence is finally rendered according to law the power of the court to punish the prisoner is at an end, but the sentence in many cases may be in the alternative, as where the prisoner is sentenced to pay a fine or in default of that to be imprisoned for a certain period. When the sentence by its terms imposes a greater penalty than the law allows, that part of it which is within the law will stand as a valid sentence; and, if it be void for such excess or for other formal defect, the court may re-sentence the criminal because the previous judgment was not a valid one, and therefore in law did not constitute a sentence. In this respect the sentence is notably distinct from the verdict, a defect in which cannot be remedied by again subjecting the prisoner to trial. See JEOPARDY.

When the sentence is for imprisonment for two or more successive terms, or to the payment of a fine and to imprisonment for conviction of more than one crime, as where the indictment contains counts, or specifications, charging the commission of separate though connected crimes, and the sentence is made up by adding together the legal penalties for the several crimes committed, it is called an *accumulative*, or, more commonly, *cumulative* sentence. Where the same offense involves a double penalty, as both fine and imprisonment, and both are imposed, the sentence is not therefore cumulative.

The *indeterminate* sentence has arisen from the endeavor to shape the law so as to furnish an incentive to convicted criminals to reform. It has been defined as a sentence which is "imposed by the court without fixing a definite period of limitation or term of imprisonment, but which simply directs that the convict be imprisoned or placed in the custody of the prison authorities to be held for not less than the minimum nor longer than the maximum fixed by law for the offense for which the prisoner stands convicted." Provisions have been made by statute in many of the States for the imposition of such sentences, and they have been found to work well in practice, although the merits of the indeterminate sentence are not fully conceded by all. Such sentences, as above defined, have been upheld as constitutional in some States, as Ohio, Illinois, Indiana, and Massachusetts, but were held unconstitutional in the State of Michigan.

See for further information, such titles as JURY; PUNISHMENT; and consult the report of J. Franklin Fort to the American Bar Association (1898).

SENTIMENT (NL, *sentimentum*, from Lat. *sentire*, to perceive). In psychology, a term sometimes given as a sub-heading under emotion (q.v.) and sometimes set off as a distinctive mental complex. There is a substantial agreement among psychologists that sentiment is closely related to emotion, that it is, however, less abrupt, and contains, at least usually, a larger intellectual element.

The chief classes or groups of sentiment are logical, social, moral, religious, and aesthetic. (1) Logical sentiments are the feelings which

come from intellectual processes *as such*: judgment, thought, reasoning, argument. (2) The social sentiments are those that are aroused directly by the interaction of individuals in a community. They include pride, innocence, vanity, trust, security, forgiveness, compassion, etc. (3) The moral or ethical sentiments attach themselves to the ideas of right and duty or moral approbation and disapprobation, and of conscience. They are closely allied to some of the social sentiments. (4) The religious sentiments combine in various ways sentiments from all the other classes. They include awe, humility, reverence, faith, sinfulness, exaltation, and repentance. (5) The aesthetic sentiments centre about judgments of beauty and ugliness. Consult the authorities mentioned under EMOTIONS.

SENTIMENTAL JOURNEY, A. A series of sketches by Sterne (1768). The work is based upon some of Sterne's experiences in Southern France, where he spent a year, owing to failing health. Sentimentalism is the theme of the sketches, which are also characterized by their admirable depiction of every-day life.

SENTINEL (OF, Fr. *sentinelle*, sentinel, watch, little path, diminutive of OF, *sentie*, path), SENTRY. A soldier posted in some responsible position to guard or protect the place, persons, or property. The duty of a sentinel is one of the most important responsibilities of military life. In time of peace, the faithful carrying out of sentinel duty is an effective aid to the maintenance of good order and military discipline; while, in active service, the safety and security of the camp or post, and frequently the lives of comrades, will depend on his vigilance. In the United States Army, post and camp guards are relieved every twenty-four hours, and, except in emergencies, privates are not detailed for guard duty more than once in five days. During their tour of duty, each sentinel is subject to the orders of the commanding officer, the officer of the day, and the officers and non-commissioned officers of the guard only, and all persons, of whatever rank, are required to observe respect toward him. He must not permit more than one of any party to approach him for the purpose of giving the countersign. The punishment for any dereliction of sentry duty is very severe, and in actual war may involve the death penalty. See GUARD.

SENUSSI, *sen-wō'sē*, MOHAMMED BEN ALI (S-SENUSSI). A North-African Moslem, who, under the influence of Wahabism (See WAHABISM), founded at Mecca in 1837 a brotherhood for the purification and propagation of Islam. The founder died in 1859, and his son established a Church-State at Jerabub, in the Sahara, between Egypt and Tripoli. He gave himself out as the Mahdi (q.v.), and undertook by the collection of arms to prepare for a *jihād* or holy war. The Brotherhood of es-Senussi is a puritanic order of the deyah type, secret in its organization. It has some 120 centres in North Africa and Arabia, including a strong one at Mecca, where many pilgrims from all parts of the world are initiated. The Senussi movement has resulted in the rapid spread of Mohammedanism among the Sudanese tribes, and has not failed to take on a political aspect. Consult: Dupont and Cappolani, *Les confrères religieux musulmans* (Algiers, 1887).

SEOUL, *sē-ool'*, or *Sōt'*, more properly HAN-YANG. The capital of Korea, about 3 miles from

of the Han, and about 19 miles in a direct line east-northeast of Chemulpo, a port on the Yellow Sea (Map: Korea, G. D.). It lies in a basin surrounded by rugged hills, and several lofty rocky crags rise within the city. The city proper is enclosed by a high wall, having a circuit of about 10 miles and pierced by eight gate ways. It is divided into four sections by two broad avenues, intersecting at right angles. The remaining streets are mostly narrow and crooked lanes. The houses are as a rule low mean dwellings, a large proportion of them mere hovels. The principal edifices are the old and the new royal palaces, the former of which is an extensive group of well built granite structures surrounded by beautiful parks. Other notable buildings are a temple of Confucius, the temple of royal ancestors, and a Roman Catholic cathedral. Seoul has an electric light plant, and an electric street-railway runs to the river port, Riong-san. The Han has not sufficient depth to give access to large vessels, but a railway connects the city with Chemulpo. Other railway lines are under construction to Fusan and Wiju. There is telegraphic communication with the principal cities of the country and with the outside world. Seoul is the social and educational centre of Korea. Two daily newspapers are published. There are several schools for the teaching of foreign languages. Seoul was made the capital of the kingdom in 1392, and was opened to foreigners in 1883. Population, in 1902, 193,606.

SEPARATE ESTATE (Lat. *separatus*, p.p. of *separare*, to separate, from *se-*, apart + *parare*, to prepare). A legal term commonly employed to denote that property of a married woman held by her independently of her husband's interference and control. In England and in most of the United States the common-law rule (see HUSBAND AND WIFE) have been modified, and in some respects entirely abrogated, by statutes. The tendency is to give a married woman the complete control of all her property as if she were single. In probably all of the United States, by statutes, the real property of a married woman is now free from all claims of her husband, except his inchoate right to curtesy, and in most States the same rule applies to personal property. In most of the United States the savings of a wife out of money given to her by her husband for household expenses do not become her separate property, but are the property of her husband. Where, however, property is conveyed to a married woman by an instrument containing conditions and limitations as to the possession and disposition, the latter will govern, as the statutes are intended to cover only cases where there is no express limitation of ownership, or where property is owned before marriage or acquired by descent. See DOWER; CURTESY; MARRIAGE.

SEPARATION (Lat. *separatio*, from *separare*, to separate). A technical legal term, employed to denote a cessation of cohabitation of husband and wife by mutual agreement, and without the intervention of a court of law. This is commonly done where husband and wife believe themselves unable to agree from incompatibility of temper, but where there is no cause for an absolute divorce, and often no cause for a judicial separation. The parties usually sign a separation agreement, which generally contains

provisions for the wife's maintenance by the husband, the disposition and custody of the children, and so on. The law does not favor the separation of husband and wife, and, therefore, if the agreement is deliberately drawn up with an intention to live apart at a future time, it will be null and void. However, if the parties are living apart, and desire to take this means to avoid disputes as to the amount to be paid for the wife's maintenance and as to the custody of children, the agreement will be enforced by the courts. Such an agreement does not prevent the parties, at any time, from resuming cohabitation, upon which it becomes void. While a husband and wife are living apart under a separation agreement, the wife cannot bind the husband for her necessities, if he pays the amount stipulated in the agreement; but if that amount be grossly inadequate the courts may compel him to support her to the best of his ability. As the marriage is not dissolved by such separation, adultery on the part of either is ground for divorce; and, by the weight of authority, the husband may have an action for criminal conversation with the wife, although the damages may be nominal. The statutes of several States prescribe the details to be observed in executing articles of separation. See ALIMONY and DIVORCE.

SEPARATISTS (Ger. *Separatisten*). A religious social organization which originated in Württemberg, Germany, about the beginning of the nineteenth century. Its members, seeking a deeper religious life than prevailed in the Church, and freedom from military service, to which they were conscientiously opposed, and refusing to send their children to the clerical schools, where principles contrary to theirs were taught, were severely dealt with. Aided by members of the Society of Friends in England and led by Joseph Bäumeler (q.v.), they came to America in 1817, and were received by Friends in Philadelphia. In the same year they bought a tract of land in Tuscarawas County, Ohio, and founded their settlement of Zoar. In their Code of Principles they avow belief in the ordinary doctrines of evangelical Christianity; all ceremonies are banished and declared useless and injurious; honors due to God, such as uncovering the head or bending the knee, are refused to mortals; separation is declared from all ecclesiastical connections and constitutions; the necessity of the political government is recognized; and fidelity to the constituted authorities is professed. Although a rule of marriage was laid down, complete sexual abstinence was held to be more commendable; and marriage was not practiced till about 1830, after which time it became common. Articles establishing a community of goods and interests were adopted in 1819. An act of incorporation for 'the Separatist Society of Zoar' was obtained from the Legislature of Ohio in 1832. Joseph Bäumeler was chosen the principal executive officer, or 'general agent,' and continued its spiritual as well as temporal leader till his death in 1853. The members of the society were of two classes, novices and full members. The novices or probationers served for one year before being admitted to membership of the second class. Their obligations were renewed on entering into full membership, and in addition the candidate made a full and final surrender of all his possessions, and of all that he might acquire. Religious services were held on Sun-

days, with singing, reading of the Bible, and at the principal meeting a discourse by Bambley, or, after his death, the reading of one of his printed discourses, but no audible prayer. Baptism and the Lord's Supper were not recognized. Marriage was not permitted outside of the society. Disputes were settled by arbitration. (See ZOAR COMMUNITY.) Consult Nordhoff, *Communitarian Societies* (New York, 1874); Randall, *History of the Zoar Society* (Columbus, 1900), with a full account of the dissolution of the society; Wink, *American Communities* (Chicago, 1902); Bambley, *Die wahre Separation*, etc. (Zoar, 1856).

SEPARATOR (Lat. *separator*, one who separates, from *separare*, to separate). An apparatus used in dairying to remove the cream from the milk by centrifugal force generated in a rapidly revolving bowl.

SECTION OF INTERIOR OF REVOLVING DRUM.

It supplants the gravity process commonly used. The earliest form of separator consisted of buckets suspended from arms attached to a vertical shaft. When the shaft revolved rapidly the buckets swing out in a nearly horizontal position and the milk in them was separated into layers of cream and skim milk. The modern form consists of a bowl or drum capable of being revolved at a high rate of speed, and with arrangements for admitting the milk and removing the cream and skim milk. The process of separation is continuous, a steady stream of milk run-

involved at a high rate of speed, and with arrangements for admitting the milk and removing the cream and skim milk. The process of separation is continuous, a steady stream of milk run-

SECTIONAL VIEW OF DE LAVAL HAND-POWER CREAM SEPARATOR.

ning into the bowl, and skim milk and cream pouring out through the respective tubes. The rapidity of separation and the richness of the cream are under the control of the operator.

Separators vary in size and in detail of construction. The small separators run by hand separate from 15 to 300 pounds of milk an hour, and the larger power machines up to 5000 pounds. When properly run the better grades of both hand and power separators have only about 9.1 per cent. of fat or less in the skim milk. The perfection of the separator has been one of the greater factors in the development and improvement of dairying (qv.).

SEPHAR'DIM. See ASHURNAZIM, JEWS.

SEPHAR'VAIM (Heb. *Sephervaim*). According to II. Kings xiv. 13, Isaiah xxxv. 19, xxxvii. 13, a city in Syria captured by the Assyrians. It has been identified with Sidram of Ezek. xlvii. 16, lying between Damascus and Hamath. It seems to be mentioned also in the Babylonian Chronicle, i. 28. The same name occurs also in II. Kings xvii. 24, xviii. 34, as one of the places from which colonies were brought into Samaria. These views differ. Some scholars identify this locality with the one first mentioned; others hold that the reading here should be Sippar, the famous North Babylonian city, the present form arising from confusion of the whole text with xiv. 13. According to II. Kings xvii. 31, the Sefarvites introduced the worship of Adrammelech and Anammelech, obscure deities, whose names point, however, rather to the Syrian than to the Babylonian city.

SEPIA (Lat., from Gk. *σπρία*, cuttlefish, sepia). A brown pigment now little used, but formerly much valued as a water-color. It is prepared from the secretion in the 'ink bag' of cuttle-fishes. This substance is agitated in water to wash it, and then allowed slowly to subside, after which the water is poured off, and the sediment, when dry enough, is formed into cakes or sticks. In this state it is called 'India ink.' If, however, it is dissolved in a solution of caustic potash, it becomes brown, and is then boiled and filtered, after which the alkali is neutralized with an acid, and the brown pigment is precipitated and dried; this constitutes the proper sepia. It is usually prepared in Italy, great numbers of the species which yields it most abundantly (*Sepia officinalis*) being found in the Mediterranean. India ink is prepared in China, Japan, and India, where it is used both as an ink and as a pigment.

SEPOY (Hind., Pers. *sipāhī*, soldier, horse-man, from Pers. *sipāh*, *sipāh*, army). A native British Indian soldier. They have been a part of the British forces, irregular and regular, since the middle of the eighteenth century, and with the exception of the rebellion, have ever been loyal to Great Britain. (For Sepoy Rebellion, see INDIA.) They consist of practically every race and tribe in India, and are officered by both natives and Europeans. The higher grades are all held by Europeans. See ARMIES, paragraph devoted to India under *British Empire*.

SEPP, zep, JOHANN NEPOMK (1816-). A German Catholic Church historian, born at Tölz, Bavaria. After studying philosophy and theology in Munich and visiting the East (1845-46), he became professor of history at the University of Munich, was deposed in 1847, reinstated in 1850, and, for personal reasons, retired in 1867. He was elected to the Frankfurt

1818, to the German Customs Parliament (1818), and to the Bavarian Chamber of Deputies (1849). He was an enthusiastic advocate of a united Germany. His principal writings include: *Das Leben Jesu Christi* (2d ed., 1855-62); *Leben und Lehren Jesu in ihrer weltgeschichtlichen Bedeutung* (1864); *Geschichte der Apostel vom Tode Jesu bis zur Zerstörung Jerusalems* (2d ed., 1866); *Das Heidentum und dessen Bedeutung für das Christentum* (1853); *Jerusalem und das Heilige Land* (2d ed., 1878); a biography of *Görres* (1896); and numerous contributions to the local history of Bavaria.

SEPPHORIS (Heb. *Sippori* or *Sippōri*). A city of Galilee, famous in later Jewish history, the modern Saffuriye. It lies on the slope of a high hill three miles west of Cana of Galilee, in the midst of a region once famed for fertility. The place is not named in the Old Testament, but is identified by the Talmud with Kitron (Judges i. 30). It is first mentioned by Josephus for the date B.C. 104. He speaks of it as "the greatest city in Galilee and built in a very strong place." Gabinius made it the capital of Galilee (about B.C. 57). Originally a strong Jewish centre, Varus expelled the Jewish element (B.C. 4), and it became for a time predominantly Gentile. Herod Antipas handsomely rebuilt it, and it alternated with his other creation of Tiberias as the Galilean capital. In the Jewish revolt it was plundered by Josephus. Under Antoninus Pius it was called Diocæsarea and had the right of coinage. It is famous in the history of the Talmud as the residence for 17 years of Rabbi Judah ha-Nasi, the compiler of the Mishna (died A.D. 217), who made it the great school of Galilee until the rise of that of Tiberias. It thus became again a centre of Jewish life, and was the scene of a Jewish insurrection in 339, which caused its destruction by the Romans. It was early regarded as the scene of the annunciation to the Virgin Mary and the home of her parents. Considerable remains of a large Crusader church exist. Consult the *Survey of West-cro Palestine*, vol. i. (London, 1881), and Baedeker's *Palestine and Syria*; for the Greek references, consult Schürer, *History of the Jewish People in the Time of Jesus Christ* (Eng. trans., Edinburgh, 1890); for Talmudic references, Neubauer, *Géographie du Talmud* (Paris, 1868).

SEPTARIA (Neo-Lat., nom. pl., from Lat. *septum*, *saptum*, inclosure, hedge, fence, from *sepiro*, *sepire*, to hedge in, from *sepes*, *sepes*, hedge, fence). Ovale nodules of argillaceous limestone or clay ironstone, usually divided into angular fragments by reticulating fissures that have been filled with calcite or barytes. The fissures are due to cracking of the nodule while drying. Some organic substance, such as a plant or shell, is frequently found in the interior of septaria and evidently formed the nucleus about which the mineral materials were deposited from solution.

SEPTEMBER. See CALENDAR.

SEPTEMBRISTS (Fr. *Septembriseurs*). The name given to the perpetrators of the 'September massacres' in the prisons of Paris from September 2 to 7, 1792. See FRENCH REVOLUTION.

SEPTENNIAL ACT (from Lat. *septennium*, space of seven years, from *septennis*, of seven

years, from *septem*, seven + *annus*, year). An act of the English Parliament passed in 1716 fixing the Parliamentary term at seven years. Since 1694 the term had been three years, but on account of the inconvenience of general elections at such short intervals and the desire of the Whigs to secure steadiness and fixity of political action by maintaining themselves in power the longer term was substituted. Moreover, the fear on account of the Jacobite revolt rendered it unsafe for the Whig Ministry to run the risk of a general election. The right of a Parliament to perpetuate its own existence beyond the legal term was the subject of general opposition and was violently contested. The Septennial law is still in force, although by usage the length of a Parliament seldom exceeds six years.

SEPTET (from Lat. *septem*, seven). In music, a composition for seven voices or instruments. Instrumental septets are almost invariably cyclical works in sonata form. Beethoven's famous septet (op. 20) is written for violin, viola, horn, clarinet, bassoon, cello, and double bass; but there is no general specification as to what instruments shall be used in the septet.

SEPTICÆMIA (Neo-Lat., from Gk. *σηπτικός*, *sēptikos*, putrefying + *αἷμα*, *haima*, blood), SEPSIS, or SEPTIC INFECTION. A diseased condition of the body due to absorption of bacteria and their circulation in the blood. It is commonly termed blood-poisoning, and was thought to be due to entrance of decomposed tissue into the blood. It is now definitely known to be produced by the bacteria streptococcus and staphylococcus. It is to be differentiated from toxæmia on the one hand and pyæmia (q.v.) on the other. Toxæmia is properly used to designate a systemic condition in which the poisons or toxins alone of pathogenic bacteria present in the body are absorbed and diffused throughout the body by means of the blood and lymph. In septicæmia not only the poison, but also some of the bacteria themselves are distributed through the body through the same channels. In pyæmia not only are both toxins and bacteria present in the blood, but the latter find lodgment in different parts of the body, there to set up new foci of infection. The micro-organisms responsible for septicæmia are the same as those concerned in the production of pyæmia. The bacteria may usually be found in the blood. The changes in the internal organs may be slight or there may be the usual evidences of infection in albuminoid degeneration of the liver, kidneys, and other organs. The lymph glands are usually swollen and the spleen congested and enlarged. The mucous membrane of the stomach and intestines commonly shows an acute catarrhal condition. The blood is apt to be thin, somewhat tarry in color, and its coagulability is lessened. When septic infection results from an external wound, the wound itself may appear healthy, or may show evidences of more or less infection. In such an infection as medical students incur by cutting themselves while dissecting, the wound usually shows marked evidence of the condition, while red streaks running up the arm along the course of the veins and lymphatics show the course which the infection has followed. In very severe cases œdema of the tissue surrounding the wound may develop.

Septicæmia is a surgical disease. It was fre-

quent in surgical wards of hospitals before the advent of listerism and subsequent precautionary aseptic measures. It always follows infection of an open wound.

Puerperal septicæmia, or 'child bed fever,' owes its origin to infection with streptococcus through the bleeding surfaces of the newly emptied uterus. The symptoms of septicæmia are a chill or a succession of chills, followed by a continued high fever, with delirium, prostration, and rapid emaciation. Abscesses may form in the internal organs or in lymphatic glands. In the treatment of the condition tonics and tissue-builders and local disinfectants are necessary. The antistreptococcal serum has proved efficacious in many cases. (See SERUM THERAPY.) Sepsis may occur during pneumonia, tuberculosis, Malta fever, and many other diseases, in which ulceration or an open wound offers entrance to bacteria.

SEPTIMIUS SEVERUS. Arch or. A well preserved triumphal arch on the Roman Forum, at the end of the Sacred Way, erected in A.D. 203 by the senate to commemorate the conquest of the Parthians and Arabians, and dedicated to the Emperor Septimius Severus and his sons Caracalla and Geta. The arch is 75 feet high and 82 feet broad, with three passageways connected by a cross passage. On each face of the arch are four composite columns on pedestals bearing groups of prisoners taken in battle. Above the outer arches are panels representing in low relief the eastern campaigns of Severus. The name of Geta was removed from the inscription on the arch after his murder in 212, and the space filled by a laudatory addition to the name of Severus and Caracalla. The arch during a part of the Middle Ages served as a stronghold, and in the seventeenth century the side passages were rented as shops. The surrounding rubbish was partially removed in 1803 by Pius VII.

SEPTIMOLE. In music, the same as septuplet (q.v.).

SEPTUAGINT (from Lat. *septuaginta*, seventy). The common designation of the most ancient Greek version of the Old Testament. The tradition that it was made by seventy-two translators in seventy-two days at the order of Ptolemy II. Philadelphus (B.C. 285-247) is worthless. An examination of the work shows that it is by different hands, and that different portions date from different times. It was doubtless made for the use of Alexandrian Jews who had gradually lost familiarity with the Hebrew language. The law was probably translated first, and the tradition which ascribes this portion to the time of Ptolemy Philadelphus is thought by some scholars to be correct. The concluding portion may be as late as the last century before the Christian Era. The language is the Hellenistic Greek, and the apocryphal as well as the canonical books are included. The LXX. was held in the very highest repute by the Alexandrian Jews and gradually it found its way into Palestine. It is the version of the Old Testament cited by Philo, Josephus, and the New Testament writers. It was read and interpreted in the synagogues of Egypt for some centuries after the Christian Era, was highly esteemed by the early Church, and many of the versions for use in different Christian communities were made from it. It is still in use in the Greek Church. Its greatest value at present is for the

textual criticism of the Old Testament. For manuscript and editions, and further details, see BIBLE, heading *Versions*.

SEPTUPLET (from Lat. *septuplum*, septuple, from *septem*, seven + *plus*, fold). A group of seven equal notes, which are to be performed in the time usually given to four notes of the same kind (in common time), or to six notes (in six-eighth time). It is called for by the sign 7 placed above the group.

SEPULCHRAL MOUND (Lat. *sepulchralis*, relating to a tomb, from *sepelire*, to bury, *sepulchrum*, tomb, sepulchre, from *sepulchre*, to bury). A mound erected as a memorial for the dead. The practice of raising mounds of earth and stone over the dead may be traced to prehistoric antiquity and the lowest grades of human culture. The first and earliest type was merely a heap, without a central cavity or much attention to outward form. Here a single corpse is covered with a pile of rocks or a heap of dirt scraped up and carried in baskets. In the better forms the materials are selected and the surface covered with sods or trees. The original mound was conical or the form of the body, but in later times geometric structures of exact outline were erected. Then came the log-pile, the cyst of rough slabs, the laid-up inclosure, the megalithic cell, the tomb of masonry, and the mausoleum covered with earth. In these various inclosures the dead were doubled up, laid out, heaped in ossuaries, or incinerated, the ashes being mingled with the soil or imbedded. The mounds of America furnish a great variety of these sepulchral remains ranging from the mere heap to the squared pyramid. Great tumuli and barrows (q.v.) are found throughout Northern Europe from the British Isles to Ukraine, and they are to be seen in Northern Africa and in Asia. See BURIAL.

SEPULCHRE, THE HOLY. See HOLY SEPULCHRE.

SEPULVEDA, संपुर्वेद वापि, JUAN GINZ DE (c.1490-1574). A Spanish historian, born near Cordova. He studied at Alcalá, and after living in Italy until 1536 returned to Spain as chaplain and historiographer to Charles V., and preceptor to his son, afterwards Philip II. His early polemical writings against Luther, and against Las Casas on slavery, brought him into prominence. He wrote, in addition to a *Life of Cardinal Albornoz*, *Historia Caroli V. Imperatoris Libri VXX.*, and *De Rebus Hispanorum Gestis ad Vorum Orum Mexicanorum*. His works were published in 1780 in four volumes by the Royal Academy of Madrid.

SEQUANI. A tribe of ancient Gaul, described by Caesar in the first book of his *Bellum Gallicum*. They seem to have been of Celtic stock, and to have inhabited the district later known as Franche-Comté and Burgundy. Their chief town was Vesontio (the later Besançon). They took their name from the river Sequana (now the Seine), which had its source within their territory. This district formed a separate province, called Maxima Sequanorum, under the Empire.

SEQUENCE (OF, *sequace*, Fr. *sequace*, from Lat. *sequantia*, sequence, from *sequi*, to follow; connected with Gk. *εἰσθαλ*, *hōpethai*, Skt. *śac*, to follow, Goth. *sailhran*, OHG. *schon*, Ger. *schon*, AS. *scōn*, Eng. *so*). In liturgies, a hymn intro-

of the Middle Ages as a continuation of the idea of the gospel in the mass, probably the original idea of supplying words to the musical series of notes known as neumes. Sequences were also known, especially in Germany and France, as proses, because the early ones were not metrical. Notker, a monk of Saint Gall, was the earliest great composer of them, and his work spread very widely throughout Europe; by 1500 his beautiful sequence for Whitsunday, "Veni sancte Spiritus," was adopted in at least 150 dioceses and religious Orders. Adam of Saint Victor is the principal figure in the second period. The sequences were principally used in the north of Europe; they are rare in Italian and Spanish missals, and the Cistercians and Carthusians never adopted them. In 1570 the revised Roman missal limited the number of sequences to five, including the "Stabat Mater," "Lauda Sion," and "Dies iræ." As a term in the theory of music, a sequence denotes the frequent repetition of a musical phrase, each repetition ascending or descending by a certain interval. Although the older masters frequently made use of sequences, theorists were unable to explain their exact character. Fétis finally discovered that a sequence is a purely melodic, not a harmonic progression, and that therefore in this particular case the rules of strict harmony must be suspended. Consult: Daniel, *Thesaurus Hymnologicus* (Leipzig, 1844); Mone, *Latvinsche Hymnen des Mittelalters* (Freiburg, 1853-55); Gantier, *Histoire de la poésie liturgique* (Paris, 1886).

SEQUESTRATION (Lat. *sequestratio*, from *sequestrare*, to surrender, lay aside, remove, from *sequester*, mediator, agent, probably from *sequi*, to follow). An equitable process directing a sheriff, or four or more commissioners, to seize and take possession of the property of a defendant, or person in contempt of court, and receive the rents and profits, if any, until some decree or order of the court is satisfied, or until litigation in regard to the property is determined. It was employed to enforce the payment of money damages, which are often granted as incidental to the main relief of a court of equity, and to enforce obedience to decrees of the court, where a person was in contempt. In a few States this process is still commonly employed for the above purposes, but in most jurisdictions the process of execution has superseded it, although, unless expressly abolished by statute, the courts of equity may still resort to it in the proper cases. See EQUITY; CONTEMPT; and the authorities there referred to.

SEQUIN (Fr. *sequin*, from It. *zocchino*, sequin, from *zoca*, Sp. *zoca*, *seca*, mint, from Ar. *sikka*, die for coins). A gold coin, first struck at Venice toward the end of the thirteenth century. It was about the size of a ducat (q.v.), and equivalent to \$2.33 American. Coins of the same name, but varying in value, were issued by other States.

SEQUOIA (Neo-Lat., named in honor of *Sequoya*, or George Guess). A genus of coniferous trees closely allied to the cypress. Only two species persist, both in California. They are the big tree (*Sequoia gigantea*) and the redwood (q.v.) (*Sequoia sempervirens*). The former is the largest American forest tree and one of the largest in the world. The average height of the

trees is said to be about 275 feet, although specimens exceeding 320 feet, with a trunk diameter of 30 to 35 feet near the ground, have been measured. The trees are buttressed at base, so that they lose their diameter rapidly for a few feet, after which they taper gradually and are frequently 100 to 150 feet without a branch. The wood is light, soft, coarse-grained, and durable, especially when in contact with the ground. The heart wood is red, turning darker upon exposure; the sap wood is thin and white. The bark of the tree is spongy and fluted, often two feet thick. The tree contains little resin and does not burn readily. The big tree is found only on the west side of the Sierra Nevadas, at elevations between 5000 and 7000 feet. It occurs in scattered groves along with other coniferous trees, in no place forming pure forests. These groves, of which there are about a dozen, occur from Placer to Tulare County, a distance of about 250 miles near the centre of the State. The Calaveras and Mariposa groves are the best known. The former contains about 100 trees of large size, and a considerable number of smaller ones. The tallest specimen now standing is the 'Keystone State,' which is 325 feet tall, and what is believed to be one of the finest specimens standing is the 'Empire State,' with a circumference of 94 feet. A fallen specimen known as the 'Father of the Forest' was broken in

falling, but it is estimated as more than 400 feet tall. The Mariposa grove contains about 500 trees of all sizes, of which perhaps 100 are large specimens. A number of fine specimens are to be found in the State and National Forest Reserves, but the finest are upon private holdings. The discovery of the first of these big trees has been attributed to a hunter named Dowd in 1850, but it is claimed that John Bidwell actually visited the same grove, the Calaveras, in 1841, and to him should be given the credit of their discovery. The proper botanical name to be applied to this tree has been a subject of controversy. In England it is generally known under the name *Wellingtonia gigantea*, but as the tree does not differ from *Sequoia* the name was transferred to *Sequoia gigantea*. By some laws of nomenclature the name should be *Sequoia Washingtoniana*, but as the specific name *gigantea* is best known, it is here retained. The tree has been successfully grown in England and elsewhere. Some forest specimens are estimated to be from 1000 to 2000 years old.

The genus *Sequoia* appeared first in the Cretaceous beds of Atane, Greenland, and in the Potomac group of North America, and is represented by later species in the Tertiary of North America and Europe which are very similar to those remnant species now living in the Western United States. Still earlier ancestors were Lep-

SEQUOIA GIGANTEA.

SEQUOIA

MARIPOSA GROVE OF RED TREES, YOSEMITE VALLEY

tostrobis and Swedenborgia of the Jurassic and Voltzia of the Triassic, all of which attained great size. See CONDÉRE.

SEQUOYA, sê-kwoi'yá, or GEORGE GUESS (c. 1760-1843). A Cherokee mixed blood, famous as the inventor of the Cherokee syllabary. He was born about the year 1760 and lived as a boy with his mother at the Cherokee town of Tuskegee, close to old Fort Loudon, in East Tennessee. As he grew up he became a hunter and fur trader, but also developed a considerable mechanical ingenuity, especially in the making of silver ornaments. He was led by a chance conversation in 1809 to reflect upon the ability of the whites to communicate thought by means of writing, with the result that he set about devising a similar system for his own people. For this purpose he made use of a number of characters which he found in an old spelling book, taking capitals, lower case, italics, and figures, and placing them right side up or inverted, without any idea of their sound or significance in English use. Having thus utilized about thirty-five ready-made characters, he obtained a dozen or more by modifying some of these originals, and then devised others from his own imagination to make a complete syllabary of eighty-five characters, capable of expressing every sound in the Cherokee language. By means of this invention anyone speaking the language can learn to read and write it perfectly in a few days. Since then the same principle has been utilized by missionaries for several other Indian languages, notably the Cree and Chippewyan. After years of patient labor in the face of ridicule, discouragement, and repeated failure, he finally perfected his invention, and in 1821 submitted it to a public test by the leading men of the Cherokee Nation. Its great value was at once recognized, and within a few months thousands of hitherto illiterate Cherokee were able to read and write their own language. In the next year he visited the West, to introduce his system among those of the tribe who had removed to Arkansas. On a second visit in 1823 he decided to take up his permanent residence with the Western band. In 1839 Sequoya was instrumental in bringing about a union of feeling between the 'Old Settlers,' as the Arkansas band was then known, and the body of the nation, which had just then removed from their original territory in the East. Consult: Foster, *Sequo-yah, the American Calamus and the Modern Moses* (Ithaca, N. Y., 1885); Mooney, *Myths of the Cherokee* (Washington, 1900).

SERAGLIO, sâ-râ'lyâ (It. *seraglio*, inclosure, seraglio, from ML. *seraculum*, spigot, Lat. *seracula*, little bolt, diminutive of *sera*, bolt, bar, from *serare*, to bind together, from *serere*, to bind, join; connected with Gk. *εραειν*, *circin*, Skt. *sâ*, to bind; confused in meaning with Ar., Turk. *sarai*, from Pers. *sarai*, palace, inn, seraglio). The collection of buildings with surrounding grounds which formerly constituted the Imperial residence of the Sultan at Constantinople. It is situated on the easternmost of the seven hills of the city, between the Sea of Marmora, the Bosphorus, and the Golden Horn, and is surrounded by a wall more than two miles in circumference. Mohammed II. began the erection of a palace on this location in 1468, and occupied it during a portion of the year. Solyman II. (1520-66) greatly

enlarged it and made it his habitual residence. Since 1839 it has not been occupied by the Sultan, and buildings and grounds are falling into decay. The Seraglio consists of two inclosures, an outer and inner; free access is allowed to the former, which constitutes nine-tenths of the whole. Among the buildings in the outer portion are several Imperial schools, a hospital, barracks, and the museum of Constantinople. Among the noteworthy structures of the inner portion are the Hall of the Divan, the Imperial Treasure House and Library, and the Bagdad Kiosk. Certain relics of the Prophet are kept here, among them the black mantle which he is said to have given to the poet Kaab. Annually on the fifteenth of Ramadan the Sultan comes in great state to render homage to this relic—the only time in the year at present when he visits the Seraglio or Stamboul. The Turks apply the name seraglio (or more properly serai) to any residence of the Sultan. In English it is often incorrectly confused with harem (qv.). Consult Grosvenor, *Constantinople* (Boston, 1895), and for a description of the Seraglio in its greatest glory Tavernier, *Voyage en Turquie, en Perse, et aux Indes* (Paris, 1677-79).

SERAING, se-râ'x'. A town in the Province of Liège, Belgium, on the Meuse, four miles by rail southwest of Liège (Map; Belgium, D 1). It has a factory for the manufacture of steam machinery, locomotives, etc., which is probably the largest in the world. The town depends on these works for its prosperity, the company maintaining schools, hospital, orphan asylum, etc. In the vicinity are valuable coal mines, and one of the largest glass factories of Europe. Population, in 1900, 39,623.

SERAJEVO, se-râ'yê-vâ, or BOSNA-SERAI. The capital of Bosnia, beautifully situated in the midst of gardens on both sides of the Miljacka, 122 miles southwest of Belgrade (Map; Austria, F 5). The river is here spanned by several fine stone bridges. The town has been greatly advanced by modern improvements. Noteworthy structures are the Catholic cathedral (1889); the large sixteenth-century Mosque of Husied Bey; the town hall; the Governor's residence; and the museum with a collection of antiquities. The picturesque ruins of the old castle, erected by the Hungarians in the thirteenth century, crown the height above the town. Serajevo has a Catholic seminary. The principal industry is the manufacture of metal ware. There are also dyeing and silk-weaving establishments, extensive potteries, a large brewery, and a Government tobacco factory. Serajevo is an important commercial entrepôt, and the immense bazaar is the centre of a very lively trade. It is connected by rail with the Austro-Hungarian railroad system. There are valuable iron mines and mineral baths. Population, in 1885, 26,268; in 1895, 41,173.

SERAMPUR, ser-âm-pûr', or SERAMPORE. A town in the Province of Bengal, India, 13 miles north of Calcutta, on the Hugli River (Map; India, E 4). It extends along the river front and is very picturesque. The most prominent feature is the Baptist College, occupying a site overlooking the river. It has a library with valuable manuscripts and a fine collection of portraits. Other objects of interest are the former residence of the Danish Governor, now the Gov-

of the old Danish church, and the first tablets to the early mission-ary period, in 1901, 44,451. Serampur came in British possession, known as Fredericksburg, in 1815, when it was ceded to the East India Company. It is noted as the centre of the first missionary movement of the early years of the nineteenth century. Ward, Carey, Mack, and Marshman, the leaders of this movement, are buried here.

SERAO, sà rì'o, MATHILDA (1856—). One of the most prominent of modern Italian novelists, born at Patras, Greece. She first wrote short sketches for the Neapolitan papers, and was for a time connected with the editorial staff of the *Capitan Francussa*. Later, with her husband, Edoardo Scarfoglio, she founded the *Corriere di Roma* (afterwards *Corriere di Napoli*), and in 1891 founded the *Mattino*. As a novelist she shows in her earlier work unmistakably the influence of the French realists, notably Zola, whose *Conte de Paris* she follows in spirit as well as title in her *Conte di Napoli* (1885). A good many of her books deal with the various phases of Neapolitan life. In her later novels she devotes herself to psychological problems, which she handles with much subtlety and power. Among her best works are: *La conquista di Roma* (1885); *Vita e avventure di Riccardo Joanna*; *Il paese di Cuccagna* (1891); *Addio amore*. In her more recent book, *Al Paese di Gesù*, she seems to have joined the neo-mystic school of which Fogazzaro is a leading representative in Italy. In 1901 Serao's *Paese di cuccagna* appeared in English translation as *The Land of Cockayne*, in the same year, *The Ballet Dancer (La ballerina)*, and *On Guard, Sentinel (All'erte sentinella!)*, and in 1902 the *La conquista di Roma* under the title *The Conquest of Rome*.

SER'APE'UM (Lat., from Gk. Σεραπέιον, *Serapeion*, Σεραπέιον, *Serapeion*, from Σέραπις, *Serapis*, Σάραπις, *Sarapis*). A name signifying a temple of the god Serapis (q.v.). Several such temples existed in Egypt, the most remarkable being the Serapeum of Alexandria, said to have been one of the grandest buildings in the world. It was built by Ptolemy I. in the suburb of Racois on the site of an older temple, and was richly adorned with sculptures and paintings. The temple was burned down in the reign of Marcus Aurelius, but was soon rebuilt; it was finally destroyed, in A.D. 391, by Bishop Theophilus of Alexandria. The Serapeum of Memphis (q.v.), situated near the site of the modern village of Saqqara (q.v.), was the funerary temple of the sacred bull Apis. It consisted of an extensive group of buildings, with pylons, an inner and an outer court, and the usual appurtenances of Egyptian temples, and was connected by an avenue of sphinxes with a small serapeum of the Greek period, before which stood eleven statues of Greek philosophers and poets arranged in a semicircle. Within the chambers of the Egyptian Serapeum was established a colony of hermits who lived in cells attached to the various chapels of the temple. A regularly organized monastic system prevailed among them, and there can be no doubt that they were the prototypes of the Christian monks and ascetics of a later period. Below the great temple were the subterranean tombs in which the mummies of the Apis bulls were deposited from the time of Amenophis

III., or perhaps earlier, down to the Roman period. The earlier tombs are square chambers, hewn in the rock, and they were connected by shafts with chapels standing above them. In the nineteenth year of Rameses II. a subterranean gallery, about 110 yards long, was hewn out and flanked by some 40 chambers, each of which was walled up after receiving the remains of a sacred bull. In the reign of Psammetichus I. (q.v.) a new gallery was excavated upon a much more extensive scale, and additions were made to it from time to time by the Saitic and Ptolemaic monarchs. The Apis tombs were opened in 1851 by Mariette, who found some of the mummies still intact in the coffins in which they were buried. Among the many valuable relics found, the most instructive were the *Apis steles* or small tablets recording the exact dates of birth, enthronement, and burial of the sacred animals. These tablets furnish chronological data of the utmost importance; they are dated by the regnal years of the kings under whose rule the recorded events occurred, and they have thus served to determine with precision the duration of the reigns of many Pharaohs, and the order in which they succeeded each other. Consult: Mariette, *Mémoire sur la mort d'Apis* (Paris, 1856); id., *Le Sérapéum de Memphis* (ib. 1857); Wiedemann, *Aegyptische Geschichte* (Gotha, 1884-88); id., *Religion of the Ancient Egyptians*, translated (New York, 1897); Budge, *A History of Egypt* (ib., 1902).

SERAPH (Heb. sàrâph, pl. sêrâphim). An order of celestial beings mentioned only once in the Bible (Is. vi. 2-6). From the description there given it would appear that they were conceived as human in form, having hands, faces, and feet, but having also wings. Of these they had six, or three pairs, with one pair covering their faces, with a second their feet, and flying with the third pair. They are ranged opposite each other and proclaim the holiness of Yahweh. They also carry out His commands. The origin of the word as well as of the idea is still a matter of conjecture. The word is rendered by Jewish commentators 'the brilliant ones,' but other scholars propose 'the lofty ones'; still others would change the text, reading *shêrâthim* for *sêrâphim*, and translate 'ministering ones.' So radical a procedure, however, is not called for, and since the underlying stem *sârâph* signifies to consume with fire, it seems reasonable to connect with the seraphim the notion of purification by fire and to regard them as the agents who bring about such purification—which as a matter of fact is the function assigned to them in Isaiah's vision (Is. vi. 6-8). There is evidently some relationship also between Isaiah's seraphim and the 'fiery serpent' (*sârâph*) referred to in Num. xxi. 6 and Deut. viii. 15 (cf. Is. xiv. 29; xxx. 6), which bites the Israelites in the desert. This seraph appears to have been originally a personification of the serpent-like lightning. The popular notion is transferred by the Prophet into the spiritual realm, and in this transfer all traces of the serpentine form disappear. A factor in bringing about this transfer may have been the Egyptian conceptions of winged griffins—called in Demotic texts *serb*—who act as guardians of tombs and temples. It is to be noted that winged men and beasts appear also on the Assyrian monuments. See CHERUB.

SERAPHIM, ORDER OF THE. The oldest Swedish order, also called the Blue Ribbon. Its foundation is ascribed to Magnus Ladhuis in 1260, and it was renewed by Frederick I. in 1748. The decoration, worn on a blue ribbon, consists of an eight-pointed cross with seraphs' heads and patriarchal crosses, bearing the letters JHS with three Swedish crowns.

SERA'PIS, or **SARAPIS** (Lat., from Gk. *Σέραπις*, *Σάραπις*). An Egyptian deity worshiped especially at Memphis and at Alexandria. The name is a compound of Osiris and Apis and in its earliest Greek form occurs as Osirapis, of which Serapis (Sarapis) is a corruption. The god, in fact, was the sacred bull Apis (q.v.), who, after his death, became one with Osiris and, under the name of Osiris-Apis (Egyptian *Oser-Isaf*), was worshiped as a god of the dead. The Serapeum, or temple of Serapis, at Memphis, enjoyed the reputation of special holiness and was visited by pilgrims from all parts of Egypt. The Greeks identified Serapis with their Hades, the King of the Underworld, and Ptolemy I. built the famous Serapeum of Alexandria upon the site of an older temple of the Egyptian god. This temple seems to have contained two statues of the god; one said to have come from Sinope, the other, representing the god as Hades with Cerberus, brought from Seleneia. The Alexandrian Serapis was therefore a fusion of the Greek and Egyptian divinities. Under the Romans when the worship of Serapis spread beyond its original territory, he, rather than Osiris, was regarded as the consort of Isis. Consult: Wiedemann, *Religion of the Ancient Egyptians*, translated (New York, 1897); Mahaffy, *The Empire of the Ptolemies* (New York, 1898); id., *A History of Egypt Under the Ptolemic Dynasty* (ib., 1899); Milne, *A History of Egypt Under Roman Rule* (ib., 1898). See **SERAPEUM**.

SERBIAN LANGUAGE AND LITERATURE. See **SERVIAN LANGUAGE AND LITERATURE**.

SERBO-CROATIAN (or **SERBO-HORVATIAN**) **LANGUAGE**. The speech of about 8,000,000 people inhabiting the Kingdom of Servia, the Principality of Montenegro, the provinces of Bosnia and Herzegovina, Old Servia (Novibazar Kosovo), Croatia, and Slavonia, the southern part of Hungary proper, Istria, and Dalmatia.

With the Bulgarian and Slovenian it forms the so-called southern group of the family of Slavic languages (q.v.). Among the phonetic peculiarities of Serbo-Croatian are the frequent occurrence of the broad *a* for the *e* or *o* in the other Slavic languages, as Serbo-Croatian *otats*, 'father,' Russian *oshets*; the vocalic *r*, as Serbo-Croatian *srtse*, 'heart,' Russian *serdtse*; the change of *l* into *n*, when in the middle of a word, as Serbo-Croatian *volk*, 'wolf,' Russian *volk*, and into *o* when final, as Serbo-Croatian *pisao*, 'I wrote,' Russian *pisal*. In morphology, the loss of the dual is almost complete, and the locative of nouns, as well as the supine and present passive participle in verbs, has also disappeared. The accent is entirely free, the Croatian, or Horvatian, generally agreeing with the Russian accentuation, the Servian proper usually following almost rigid laws. The existence of long and short vowels along with a musical pitch accent makes Serbo-Croatian one of the most expressive among the Slavic languages. The characters used vary with the religion prevailing: in the Croatian Catholic

lands, the Roman alphabet is used, while the bulk of the Servians, belonging to the Greek Orthodox Church, use the ancient *Kirilitsa* (q.v.), modified by *Karajitch* (q.v.) in the early part of the nineteenth century. Consult: *Ymazal, Serbische Grammatik* (Brunn, 1882); Budmani, *Grammatica della lingua serbo-croata (Illirica)* (Vienna, 1867); Partchitch, *Grammaire de la langue serbo-croate*, trans. by Fenetier (Paris, 1877); *Karajitch, Serbisch-deutsches lateinisches Wörterbuch* (3d ed., Belgrade, 1898); id., *Deutsch-serbisches Wörterbuch* (Vienna, 1872); *Popovitch, Wörterbuch der serbischen und deutschen Sprache* (2d ed., Pansova, 1886-95).

SERENA, sà rá'nyá, LA. A town of Chile. See **LA SERENA**.

SERENADE (OF, *serenade*, Fr. *serenade*, from It. *serenata*, serenade, from *serenare*, to make serene, from *sereno*, from Lat. *serenus*, calm, serene). Originally music performed on a calm night; hence a song given under the window of a lady by her lover. The modern serenade (or serenata) is a cyclical composition for full orchestra. It differs from the symphony in the greater number of its movements (5, 6, 7, or more) and in their freer construction.

SERES, sër'és. A town in the Vilayet of Saloniki, European Turkey, 43 miles northeast of Saloniki (Map: Balkan Peninsula, D 4). It is protected by high walls, and contains a citadel, many handsome villas, and several mosques and churches. It is the centre of the Turkish woolen industry, and exports skins, cotton, wool, and tobacco. Population, 30,000.

SERETH, sër'ët. An important affluent of the Danube. It rises as the Great Sereth in the Austrian Crownland of Bukovina, flows southward through almost the whole length of Moldavia, and joins the Danube five miles above Galatz (Map: Balkan Peninsula, F 1). Its principal tributaries are the Little Sereth on the right, and the Suczava, Moldava, and Bi-stritz on the left. Total length, 291 miles.

SERF (OF, Fr. *serf*, from Lat. *servus*, servant, slave; connected with *Av. bar*, to protect). In common usage, an unfree feudal dependent, who occupies a place in the social scale above the slave. The serf was usually a peasant bound to the land which he cultivated and for which he owed service and obedience to the lord in whom the ownership of the land was vested. The serf was frequently the product of the feudal system, and under a feudal organization of society the institution of serfdom, or villeinage, is seen in its most developed form. This article will treat chiefly of serfdom or villeinage as it existed in Western Europe.

The origin and development of villeinage in Western Europe has been a subject of violent dispute among historians. With the decay of the Roman power in the fourth and fifth centuries anarchy became prevalent, and there were many who were compelled to seek the protection of their more powerful neighbors. In return they performed such services as a freeman may perform. This institution was known as the *patrocinium*, and at first the relation terminated with the death of either party. Some of those who sought protection were also owners of small parcels of land, and such land was frequently

of the land, as a general rule, to be held by the former proprietor as a fief. But it is to say, the latter was the contract, his protector the ownership. The early Germans also there probably existed some such relation between men. In the middle of the nineteenth century it was generally held that the organization of society described in the *Germania* of Tacitus was that of the free village community, by which is meant that the villages were inhabited by freemen, who held land in common, and who annually distributed the land anew. Various writers, especially Fustel de Coulanges and Seebohm, have attacked this theory, and hold that the manorial system was prevalent in Germany (see MAXOR), by which is implied that the peasants held their land from a lord, and in return for the use of the property owed service of some kind or other to the owner. In the Frankish kingdom the German and Roman elements met. Again historians are unable to agree whether the chief elements in the feudalism which developed among the Franks were German or Roman or even Celtic. It suffices, however, to state that by the tenth century there were few free peasants or artisans left in what is now France. Probably the institutions of *patrocinium* and *precarium* had been joined together, and after some further development we have serfdom as it existed in France with comparatively slight changes until abolished by the Revolution of 1789. (See FEUDALISM.) In regard to his general condition the French serf may be taken as typical.

The relationship which in France bound the serf to the lord had at first been merely a contract between the two persons in question. The general tendency, however, was toward the establishment of the principle of inheritance, and by the end of the eleventh century son inherited from father in nearly all cases. Still the laws and customs which regulated the relationship between the serf and his lord varied greatly at different periods, and in the different provinces of France, as well as in the rest of Europe. Moreover, the dividing line between the serf and the slave on the one hand and the serf and the freeman on the other is not always very clear. In general, a serf was distinguished from the slave in that he had a definite piece of land for his own use, and was protected to some extent even against his lord by fixed customs. He was distinguished from the free peasant proprietor in that he could not leave his lord without the latter's consent, and was subject to some exactions from which the freeman was exempt. The chief burdens of the serf were: (1) The *census*, or rent, which, "though estimated in money, was usually paid in the form of a large percentage of the crop, what remained over being nominally the property of the serf." (2) The *capitagium*, or *census capitis*, which was an annual poll-tax. (3) The *taille*, or arbitrary tax, which permitted the owner to demand money of the serf whenever he chose. Besides these three taxes the serf had to work on the lord's domain several days in each week. This was the *corvée*. Also, since the lord's consent was necessary for the serf to marry, permission had usually to be purchased by a fee, known as the *formariage*. Finally, when the serf died, his heir had to pay a fixed sum known as the *mortmain*, since according to the legal theory the property really be-

longed to the lord and not to the serf, and the latter's heir paid to retain the land.

The question arises, How could the serf become free? In answering this question, it must be noted that at first the serf had little desire to become a freeman. His condition was not much improved thereby, for in the absence of any central authority to which the weak could successfully appeal, the strong could exact from him what they pleased; while, on the other hand, the lord had sufficient interest in his serf to protect him from others. Later, however, at least from the time of Philip Augustus (1180-1223), conditions improved and the weak no longer needed the protection of the nobles in all cases. The lord could bring back his runaway serf, though in some places the theory prevailed that the serf might surrender all his property, both real and movable, to his lord, renounce his bond, and depart. Also some town charters had a clause which declared that an unfree person who came to the town and remained there unclaimed for a year and a day was free. These two methods of emancipation did not meet the demands of improving times, and more regular means developed by which the serf might obtain manumission. The most common came, in time, to be the payment of a fixed sum to the lord, and when the noble was in pressing need of money, as during the Crusades, he sometimes compelled his serfs to buy their freedom.

In recent years an active controversy has been waged concerning villeinage in England. The battle has been fought between the great German and French scholars; between Löbell, Waitz, and Roth on the one hand, and Raynour, Guérard, and Fustel de Coulanges on the other. In England the scholars were chiefly Germanists. Kemble, Karl Maurer, Freeman, Stubbs, and Gneist held, to all intents and purposes, the same views as Waitz and his school. In general, they believed that the Roman and Celtic civilizations played no rôle in the development of England; that the Anglo-Saxon brought with him his institutions from Germany, such as the free village community or mark. In time, however, "with the growth of population, of inequalities, of social competition, the relations of dependency are seen constantly gaining on the field of freedom," the ceorl becomes a serf, manors arise, and by the time of the Norman Conquest the transformation has been completed. In 1883 Seebohm in his *English Village Community* declared that there never was a mark system in England, and that "the Saxon invasion did not destroy what it found in the island. Roman villas and their laborers passed from one lord to the other—that is all. The ceorls of Saxon times are the direct descendants of Roman slaves and coloni, some of them personally free, but all in agrarian subjection. Indeed, social development is a movement from serfdom to freedom, and the village community of its early stages is connected not with freedom, but with serfdom." Since the appearance of Seebohm's book numerous works have appeared on both sides, and the question is far from settled. The condition of the English serf did not differ essentially from the condition of the French serf. But the English bondsmen received valuable privileges much earlier than the French villein. As early as the reign of Edward IV. the serf had the right to plead in the royal courts, a privilege

which the French serf never obtained. Moreover, in England the last known act of enfranchisement took place in the reign of Elizabeth.

In German serfdom was generally not of a very harsh kind, though it varied considerably in different parts of the country. In some portions of Prussia, however, peasants were, until 1773, in a state of absolute slavery. Serfdom was abolished in Prussia by the decree of October 9, 1807, which was issued through the influence of Stein and his associates. This declared that from Martinmas, 1810, all persons should be free in the States of Prussia. Subsequent enactments removed the social and property distinctions, which had separated the classes, and gave to every citizen the power to possess in fee simple all kinds of property. This legislation was generally imitated in the other German States. The remains of the German system of serfdom lingered until 1836 in Saxony, and until 1848 in Austria.

In Russia, where the feudal system never prevailed, and the early condition of the peasant was not a servile one, the reduction of the peasantry to a state of serfdom and their attachment to the soil were gradually effected, and did not prevail to a very great extent till the close of the sixteenth century. Peter the Great strengthened the attachment of the serf to the soil for fiscal reasons, and under Catharine II. the system reached its highest development, the serf being reduced to so low a level that he differed little, if at all, from a slave. Serfs were regarded by law as a part of the proprietor's working capital, and as such were bought and sold, sometimes with the land, and sometimes without it. The serf had no legal means of self-defense. Alexander I. introduced various improvements in the condition of the peasantry, particularly those belonging to the Crown, and in his reign serfdom was abolished in Courland and Livonia in order to weaken the power of the German nobles of those districts. The entire abolition of villeinage was effected by Alexander II. (q.v.) by a very sweeping measure. The manifesto of March 3 (February 19), 1861, gave personal freedom to more than twenty millions of serfs.

SERGEANT (OF, *sergeant*, Fr. *sergent*, Prov. *serrent*, *serrent*, servant, from Lat. *servicus*, pres. part. of *servire*, to serve; connected with *seruus*, slave). An important non-commissioned rank in the army; the next rank above that of corporal. Modern conditions demand more intelligence and military training than ever before, and have consequently greatly increased the duties of the grade. In extended movements, the sergeant is frequently compelled to act on his own initiative. In both the United States and the British armies, sergeants are distinguished by three chevrons; in the former they are of the color appropriate to the arm of the service and are worn on both sleeves of the coat. British sergeants wear three gold stripes or chevrons on the left arm only, and wear a silk sash, similar to that worn by the commissioned officer, except that it is worn over the right shoulder. See CHEVRONS; NON-COMMISSIONED OFFICER.

SERGEANT-AT-ARMS. In the English Court of Chancery, an officer who attends upon the Lord Chancellor with a mace, and executes various writs of process directed to him, apprehending, for example, persons pronounced in contempt of the court. A similar officer is attached to each House of Parliament and arrests those whom the House orders to be arrested. Sergeants-at-arms are also attached to the United States Senate and House of Representatives. They receive a salary of \$4500 a year. They are authorized to preserve order in both Houses, and also have charge of the payment of members.

SERGEANT-AT-LAW. See SERJEANT-AT-LAW.

SERGEANT-FISH (so called from its lateral stripes, which resemble a sergeant's chevrons). A large strong voracious fish (*Rachycentron canadus*), of the southeastern coast of the United States, related to the mackerels, but superficially resembling a remora. Its habit of lingering about large fishes has led to its being named 'shark's waiting-boy'; and it is also called cobia and crab-eater. It reaches a length of 5 feet, and is olive brown, with obscurely striped sides.

SERGEANTY. GRAND (OF, *sergentie*, *serjantie*, from *sergant*, *sergent*, *servant*). A species of tenure by which many of the nobility of England held their lands of the King under the feudal system. After the Conquest the land was parcelled out among the followers of the Conqueror according to their rank. At that time two species of tenure were introduced: tenure by knight-service, consisting of an obligation to perform military service in time of war; and tenure by *sergeanty*, grand and petit, which involved, in addition to military service, some further service to the King in time of peace. A tenant by grand sergeanty was bound to render some personal service to the King, as to be his standard bearer, cup-bearer, or chamberlain, and to attend Court during certain seasons. Such tenure was also said to be *per baroniam*; the tenants became known as barons, and were higher in rank than the others. Although originally lands so held could not be divided or alienated, this was quietly done from time to time, and the burdens of the tenure gradually became extinct, and were finally abolished with the military tenures. However, the hereditary privileges and honors, as to be standard bearer, etc., are still claimed by the great

ceremonious, as coronations. *Petty* (1662) is a petition for service, as to render an account of the expenses, etc., to the King and the Council, therefore, more in the nature of a bill. See *LXVIII*.

SERGEL, sēr'jəl, JOHAN TORIAS (1740-1814). A Swedish sculptor, born at Stockholm. First a pupil of L. Archeveque, he studied afterwards in Paris, and after 1767 in Rome, where during a sojourn of twelve years he acquired great reputation. Upon his return to Stockholm, whither he had been summoned by Gustavus III., he was appointed Court sculptor, professor, and in 1810 director of the Academy. The fifteen works of his preserved in the National Museum at Stockholm include a "Faunus," "Cupid and Psyche;" his masterpiece, "Diomedes Stealing the Palladium;" "The Muse of History Recording the Deeds of Gustavus Adolphus," a group of heroic size; and a colossal "Bust of Gustavus III." Besides these the "Monument of Gustavus III." (1808), at the foot of the Slottsbärke (Palace Hill), the "Resurrection," an altar-piece, and the "Monument to Descartes," both in the Adolf-Fredriks kyrka, should be mentioned. For his biography, consult Nyblom (Upsala, 1877).

SERGI, sēr'jə, GIUSEPPI (1841-). An Italian anthropologist, born in Messina, Sicily. He was educated at the University of Messina, where afterwards he became an instructor. Later he taught in Milan. In 1880 he was appointed to the chair of anthropology in the University of Bologna; in 1884 he accepted a similar professorship in the Royal University of Rome, and at the same time became director of the Anthropological Institute. He has devoted particular attention to the psychic traits as well as to the physical characters of the peoples of the East-Mediterranean region. His publications treat of archaeology, criminal anthropology, and education. His best known works are *Elementi di psicologia* (1879), *Psychologie physiologique* (1887), *Principi di psicologia* (1894), *Specie e varietà umane* (1900), and *The Mediterranean Race* (1901), in Italian, English, and German editions.

SERGINSK, sēr-gēnsk', UPPER AND LOWER. Two industrial settlements in the Government of Perm, East Russia, 43 miles west-southwest of Ekaterinburg. They were founded by Demidoff (q.v.) in 1742 and still belong to a private company. Most of the inhabitants are engaged in the extensive iron works and the iron mines in the vicinity. The population of Upper Serginsk is 14,000, and of Lower Serginsk 8,000. The annual production of both towns amounts to over 15,000 tons of pig iron and 26,000 tons of steel.

SERGIPE, sēr-zhē'pe. A maritime State of Brazil, bounded on the north by Alagoas, on the west and south by Bahia, and on the east by the Atlantic (Map: Brazil, K 6). Area, 15,090 square miles. It is the smallest State of the Republic. The coast region is flat and sandy; the interior is a sparsely watered plateau. The climate is hot and dry. The southwestern part affords good grazing land and is the seat of extensive stock-raising. In the eastern portion are cultivated sugar, cacao, tobacco, cotton, and manioc. The chief exports are sugar and rubber, and the centre of the commerce is the capital, Aracajú (q.v.). Population, in 1890, 310,926.

SER'GIUS. The name of four popes. **SERGIUS I.**, SAINT, Pope (687-701). He was born at Palermo of a Syrian family and was ordained priest in 683. On the death of Pope Conon there was a contested election, and both factions finally united on Sergius. He refused to confirm the acts of the Trullan Council (see *QUINISEXT*), and the Emperor Justinian II. sent officers to Rome to seize him; but the soldiery of the exarchate rallied to his defence, and the Imperial emissary's life was only saved by the Pope's intervention. He consecrated Saint Willibrord, the Apostle of Frisia, and succeeded in terminating the schism in Northern Italy which grew out of the pretensions of the Patriarch of Aquileia.—**SERGIUS II.**, Pope 844-47. He was of a Roman family and became archipresbyter under Gregory IV., whom he succeeded. Lothair I., displeased that he had been consecrated without waiting for Imperial sanction, sent his son Louis with an army to Rome. The Pope and the Roman nobles refused to swear fidelity to Lothair as King of Italy, but recognized him as Emperor, and Louis was solemnly crowned as King of the Lombards. In 846 Rome was attacked and devastated by Saracen hordes, who were finally driven off by Duke Guido of Spoleto, summoned by the Pope.—**SERGIUS III.**, Pope 904-11. He was a Roman by birth, consecrated Bishop of Care against his will by Formosus in 892 or 893, and elected Pope, on the death of Theodore II., in 897, by the Tuscan faction, but not recognized by the Emperor Lambert, who set up John IX. He returned to Rome in 904, overthrew the Antipope Christopher, and gained possession of the See. His pontificate was troubled, and his own character is said by some ancient writers to have been stained by the prevailing immorality.—**SERGIUS IV.**, Pope 1009-12. He was made Bishop of Albano in 1004. On his election to the Papacy he changed his own name of Peter, being unwilling out of reverence to call himself Peter II. His power was limited in secular matters by the domination in Rome of the patrician John Crescenfius and his family.

SERI, sār'ē. A wild and warlike tribe formerly holding a considerable territory on the west coast of Sonora, Mexico, together with the adjacent island of Tiburon, in the Gulf of California, but now restricted to the island. They are in the lowest culture condition, live in mere brushwood shelters, and shift constantly from place to place. Their ordinary implements are of stone or shell, their weapons being bows, clubs, and stones. The arrows are sometimes poisoned. They wear kilts of pelican skin and paint their faces with elaborate designs. They twist ropes from hair and vegetable fibre, make baskets and rude pottery, and use rafts or *balsas* woven from reeds. They know the use of the fire drill. Physically they are tall, well made, and of great agility. They seem to be untamably hostile to all aliens, and have no alliance or friendship with any other tribe. On the strength of a short vocabulary obtained by Bartlett in 1852 they were at first classed with the Yuman stock (q.v.), but later study of more adequate material shows that they form a distinct stock, which probably also included the now extinct Tepoca. They were formerly a large tribe, but have been nearly exterminated by the Mexicans. In 1852 they were still estimated at 500, but in 1894 had been

reduced to less than 300. Consult McGee, *The Seri Indians* (Washington, 1899).

SERICITE (from Lat. *sericum*, silk, from Gk. *σῆρικός*, *sērikos*, silky, *seric*, from *Σηρ*, *Sēr*, Chinaman). A fine sealy variety of muscovite, characterized by a silky lustre. It is found chiefly near Wiesbaden, Germany. See MUSCOVITE.

SERICITE GNEISS, or **SERICITE SCHIST**. A metamorphic rock, composed essentially of the hydro-micaceous mineral sericite (q.v.) with quartz or quartz and feldspar. In some cases at least sericite gneiss has been produced by the mashing of granite and rhyolite (q.v.) under the action of mountain-building forces.

SERICULTURE. See SILKWORM; SILK.

SERIEMA. A bird. See CARIAMA and Plate of CRANES.

SERIES (Lat. *series*, row, succession, from *serere*, to bind; connected with Gk. *εἶπερ*, *είπειν*, Skt. *sā*, to bind). In mathematics, a succession of terms formed according to some common law; e.g.: (1) in the series 1, 3, 5, 7, ... each term is formed from the preceding by adding 2; (2) in 3, 9, 27, 81, ... by multiplying by 3. A series in which each term after the first is formed by adding a constant to the preceding term is called an *arithmetic series* or *progression*; e.g. series (1) above. A series in which each term after the first is found by multiplying the preceding term by a constant is called a *geometric series* or *progression*; e.g. series (2) above. Any term t_n of an arithmetic series is given by the formula $t_n = a + (n - 1)d$ in which a is the first term, d the common difference, and n the number of terms. The sum of n terms is given by the

formula $s = \frac{n}{2} (a + l)$, l being the last term. In geometric series the corresponding formulas are

$$t_n = ar^{n-1}, s = \frac{l - a}{r - 1} \text{ or } \frac{ar^n - a}{r - 1}$$

A series the reciprocal of whose terms form an arithmetic series is called a *harmonic series* or *progression*. Hence any term may be found by applying the formulas of arithmetic series to the reciprocals of its terms.

Although the above are the chief series treated in elementary algebra, there is an unlimited number of kinds. E.g. a type to which considerable interest is attached is the arithmetico-geometric series, in which the coefficients are in arithmetic series and the variable in geometric series. E.g. $1 + 2x + 3x^2 + \dots (n - 1) x^{n-2} + nx^{n-1}$. If the number of terms in a series is unlimited, it is called an *infinite series*. The general or n th term in such a series and the sum of n terms, n being indefinitely great, may or may not be determinate. Infinite series in which the values of t_n and s_n ($n = \infty$) are indeterminate are of little value, but those in which a limit for s_n can be found are important. Thus in an infinite geomet-

ric series whose ratio is less than 1, $s = \frac{a}{1 - r}$

E.g. to find the sum of the distances traveled by an elastic ball which falls 2 feet and bounds 1 foot and continues indefinitely to rebound one-half the distance fallen. The distance traveled in the first vibration is 3 feet, in the second $1\frac{1}{2}$

feet, in the third $\frac{3}{4}$ feet, and so on indefinitely, whence for the whole distance $s = 2 + \frac{1}{2} + \frac{1}{4} + \dots$ or 6 feet. Recurring decimals may also be regarded to form an infinite series, and expressed as a fraction by means of the formula $s = \frac{a}{1 - r} = 1 + 2 + 600 + \dots = \frac{1}{10} + \frac{1}{100} + \dots$ where $a = \frac{1}{10}$ and $r = \frac{1}{10}$. Therefore $s = \frac{\frac{1}{10}}{1 - \frac{1}{10}} = \frac{1}{9}$.

An infinite series in which s_n as n increases indefinitely, has a finite limit is called a *convergent series*, otherwise a *divergent series*. A series in which the sum is finite, but takes alternate values as n increases, as in $1 - 1 + 1 - 1 + \dots$, is called an *oscillating series*.

The ability to determine what series are convergent and to determine the limit of s_n evidently conditions the utility of any series for the purpose of pure and applied mathematics. Thus

the trigonometric functions $\sin x = x - \frac{x^3}{3!} + \frac{x^5}{5!} - \dots$, $\cos x = 1 - \frac{x^2}{2!} + \frac{x^4}{4!} - \dots$, the exponential

series $e^x = 1 + x + \frac{x^2}{2!} + \frac{x^3}{3!} + \dots$, and the logarithmic

series $\log(1 + x) = x - \frac{x^2}{2} + \frac{x^3}{3} - \dots$ are available for those values only of the variables which

render the series convergent.

A knowledge of elementary series is very old, the Pythagoreans (B.C. 550) having treated them quite comprehensively. (See NUMERICAL.) Euclid (c.300 B.C.) used geometric series, and infinite convergent series of the geometric type appear frequently in the works of Archimedes (c.280 B.C.). Among the Hindus, Aryabhatta, Brahma-gupta, and Bhaskara treated arithmetic series, and Bhaskara discussed geometric series. The Arabs did little to advance the subject and the Europeans up to the sixteenth century had made no further progress. Saint Vincent (1584-1667) and Mercator (c.1620-87) developed the series for $\log(1 + x)$, and Gregory (1668) those for $\tan^{-1}x$, $\sin x$, $\cos x$, $\sec x$, $\csc x$. The terms convergent and divergent appear in the writings of Gregory.

The theory of infinite series may be said to begin with Newton and Leibnitz, and to have been further advanced by Euler. In 1812 Gauss published his celebrated memoir on the hypergeometric series (name due to Pfaff), which has since occupied the attention of Jacobi, Kummer, Schwarz, Cayley, Gour-sat, and numerous others. Cauchy (1821) may be considered the founder of the theory of convergence and divergence of series. He advanced the theory of power series by his expansion of a complex function in such a form. Abel was the next important contributor, and he corrected certain of Cauchy's conclusions. General criteria began with Kummer (1835), and have been studied by Eisenstein (1847), Weierstrass in his various contributions to the theory of functions, Dini (1867), Du Bois-Reymond (1873), and many others. Pringsheim's (from 1889) memoirs present the most complete general theory.

of uniform convergence was treated by Laplace (1821), his limitations being pointed out by Cauchy (1826), but the first to attack it successfully were Stokes and Seidel (1847-48). Semi-convergent series were studied by Poisson (1823) and Jacoby (1834). Fourier's series were investigated as the result of physical considerations, and Fourier (1807) set for himself the problem to expand a given function of x in terms of the sines or cosines of multiples of x , a problem which he embodied in his *Théorie analytique de la chaleur* (1822). He did not, however, settle the question of convergence of his series, a matter left for Cauchy (1826) to attempt and for Dirichlet (1829) to handle in a thoroughly scientific manner. Among other prominent contributors to the theory of trigonometric and Fourier series have been Riemann, Heine, Lipschitz, Schläfli, Du Bois-Reymond, Dini, Hermite, Helphén, Krause, Byerly, and Appell.

For an introduction to infinite series involving tests of convergence, applications to physics, and relations to integration, consult Osgood, *Introduction to Infinite Series* (Cambridge, 1897). An historical development of the subject is given by Reiff, *Geschichte der unendlichen Reihen* (Tübingen, 1889). Also by Böcher, chap. ix. of Byerly's *Fourier's Series and Spherical Harmonics* (Boston, 1893). For history and theory, consult Merriman and Woodward, *Higher Mathematics* (New York, 1896); Jordan, *Cours d'analyse* (Paris, 1893). An elementary treatment is given in Chrystal, *Algebra*, vol. ii. (Edinburgh, 1889); Bonnet, "Mémoire sur la théorie générale des séries," in the *Mémoires couronnés de la Brussels Academy* (1850); Martone, *Introduzione alla teoria delle serie* (Catanzaro, 1891-94).

SERINAGUR, *se-rā'nū-gūr'*. The capital of Kashmir. See SRINAGAR.

SERINGAPATAM, *se-rīn'gā-pā-tām'*, or **SRIRANGAPATAM**. A town in the native State of Mysore, India, 9 miles northeast of the city of Mysore, on an island in the Kavery River (Map: India, C 6). It is poorly built and unhealthy. A portion of the palace of Tippu Sahib, within the inclosure of the old fort, still remains. Other objects of interest include the Darya Daulat Bagh, the handsome summer residence of Tippu; the Lal Bagh (garden) with the tombs of Tippu and his father, Hyder Ali; and the ancient temple of Vishnu Shri Banga, from which the town derives its name. Seringapatam was the capital of Mysore until 1799. On May 4th of that year the town was stormed by the British, Tippu Sahib being killed. Population, about 12,000.

SERINGHAM. A town of Madras, India. See SRIRANGAM.

SERJEANT-AT-LAW. The highest rank of barristers (q.v.). It is a title of great antiquity, but now nearly extinct in England, although still common in Ireland. In early times the degree was conferred only on barristers of sixteen years' standing; but this qualification was dispensed with later. A serjeant was appointed by a writ under the great seal, upon the nomination of the Chief Justice of the Common Pleas, in whose court he was entitled, for centuries, to exclusive audience. Socially serjeants took precedence of King's counsel, while profes-

sionally the latter outranked the former, unless serjeants held special patents of precedence. The decay of this order in England is due in part to the fact that the Judicature Act of 1873 renders it unnecessary that a person should be admitted to the rank of serjeant before appointment to a Supreme Court judgeship, and in part to the abolition of the exclusive right of audience in the Common Pleas. Consult: Manning, *Ancient Privileges of the Serjeants at Law* (London, 1840); Pulling, *The Order of the Coif* (London, 1884).

SERLIO, sār'lyō. SEBASTIANO (1475-1554). An Italian architect and writer on art, born at Bologna. He worked as an architect at Pesaro from about 1510 until 1514, then, after having frequented in Rome the school of Peruzzi, he was employed at Bologna and Venice, and in 1540 went to Paris, where he became royal architect in 1541 and was engaged in the work on the Louvre and the Tuileries, and at Fontainebleau. He is remembered chiefly for his treatise on architecture, in which he embodied all the precepts of Vitruvius and which was published in seven books (Lyons, 1537-51, 1575). Consult Charvet, *Biographies d'architectes* (Lyons, 1869).

SERMONISM. See NOMINALISM.

SEROTINE (from Lat. *scrotinus*, late, from *serus*, late). A large, dark-brown bat (*Vesperugo scrotinus*) of particular interest for its very wide distribution, since it is known all over Europe, south of the Baltic, in Africa north of the equator, throughout the southern half of Asia, and in most of North America. It seems to be identical with our 'dusky' or 'Carolina' bat. Several color varieties are locally distinguished.

SEROUS FLUID (from Lat. *serum*, whey, serum; connected with Gk. *ὀρός*, *oros*, whey, Skt. *sur*, to flow). A thin, watery fluid occurring in various parts of the animal body, distinguished from mucus principally by its limpidity and by its being found in closed cavities only. It contains a little albumin, a trace of fibrin, about 6 per cent. of solid constituents, and 94 per cent. of water. Serous fluids have been arranged under three heads: (1) Those which are contained in the serous salt of the body, as the cerebrospinal fluid, the pericardial fluid, the peritoneal fluid, the pleural fluid, the fluid of the tunica vaginalis testis, and the synovial fluid. (2) The fluids existing in the eyeball, the amniotic fluid, and transudations into the tissue of organs. (3) Morbid or excessive transudations, such as dropsical fluids, the fluids occurring in hydatids, and in blebs and vesicles on the skin, and transudations from the blood in the intestinal capillaries, as in cases of intestinal catarrh, cholera, or dysentery.

All these fluids bear a close resemblance to one another, both in their physical and chemical characters. In so far as relates to their physical characters they are usually clear and transparent, colorless or slightly yellow, of a slight saline, mawkish taste, and exhibiting an alkaline reaction with test-paper. They possess no special formal or histological elements, but on a microscopic examination blood-corpuscles, cells of various kinds, molecular granules, and epithelium may occasionally be observed in them. They also contain fats, animal soaps, cholesterine, extractive matters, urea (occasionally), the same inorganic salts which are found in the serum of

the blood, and the same gases as occur in the blood. As rare constituents, and only occurring in disease, may be mentioned sugar, the binary acids, salts of lactic and succinic acids, creatinine, mucine, etc.

SEROUS MEMBRANE. There are seven serous membranes in the human body, three being medium and single, while two are double and lateral. They are the arachnoid, the pericardium, and the peritoneum, with the two pleura and tunica vaginalis testis. Thus they are connected, with the obvious view of facilitating motion and affording general protection, with all the most important organs in the body. Each sac or continuous membrane consists of two portions—a parietal one, which lines the walls of the cavity, and a visceral, or reflected one, which forms an almost complete coating or investment for the viscera contained in the cavity. During health the opposing surfaces of these serous membranes are in contact and only enough fluid is secreted to render them moist and capable of easy movements. After death from certain diseases, however, considerable fluid is frequently found, probably due to post-mortem exudation. An accumulation of fluid may occur during life. Of their structure it is sufficient to state that they consist essentially of (1) epithelium; (2) basement membrane; (3) a stratum of areolar or cellular tissue, which constitutes the chief thickness of the membrane, and is the constituent on which its physical properties are mainly dependent.

SER'OW (East Indian name). One of a group of goat-antelopes (genus *Nemorhædus*) nearly allied to the gorals (q.v.), but more shaggy. They inhabit Southeastern and Eastern Asia, and make their home upon high and difficult mountains, where they go about in pairs or family parties, much after the manner of the wild sheep. The common serow (*Nemorhædus habelinus*) is an inhabitant of the Himalayan Mountains, and is a rather large, ungraceful animal with coarse blackish and reddish hair, and with rough black horns about a foot long, standing upright upon the head, with a backward curve. Another well-known species is the 'tambing-utan' (*Nemorhædus sumatrensis*), which inhabits hilly districts from Eastern Tibet southward to Sumatra. Other smaller species are known in Japan and in Formosa. Consult Blanford and other writers upon East Indian zoology, and Kinloch, *Large Game Shooting in Tibet and Northern India* (London, 1885). See Plate of GOAT ANTELOPES.

SERPA PINTO, sêr'pá pên'to, ALEXANDRE ALBERTO (1846-1900). A Portuguese explorer. He entered the Royal Military College in Lisbon, and in 1864 became an ens-ign. He went from Benguela to Durban, across the continent of Africa, in 1877-79. This expedition he described in a volume translated into French and German (1881-82). In 1884-86, accompanied by Cardezo, he led another expedition to Mozambique, where the Portuguese power was extended to Lake Nyassa. In 1889 he went once more to Africa, but was finally recalled in 1890 on account of England's opposition to his strongly Portuguese policy in Matabeleland.

SERPENT. See SNAKE.

SERPENT (OF., Fr. *serpent*, from Lat. *serpens*, creeping, snake, pres. part. of *serpere*, to

creep; connected with Gk. *ἔρπειν*, *herpein*, Skt. *śarp*, to creep). A powerful bass musical wind instrument, consisting of a tube of wood covered with leather, furnished with a mouthpiece like a trombone, ventages, and keys, and twisted into a serpentine form, whence its name. Its compass is from B₂ to b₃. When skilfully played it exhibits the most startling inequalities of tone, in consequence of there being three notes, d, a, d, much more powerful than the others. The serpent was invented in 1590 by Edme Guillemaie, a canon of Auxerre in France.

SERPENTARIA (Lat., snakeweed), or VIRGINIA SNAKEROOT. The root of *Aristolochia serpentaria* and other species of *Aristolochia*. It contains a volatile oil, a resin (a camphor) and a bitter principle (*aristolochin*). It has a pungent odor and a warm camphoraceous taste. In small doses it acts as a simple bitter, increasing the appetite, assisting digestion, and mildly relaxing the bowels. In large doses it causes nausea, vomiting, and diarrhoea. It is a heart stimulant and a cerebral excitant, and in large doses causes fullness of the head, vertigo, and exhilaration. It is an aphrodisiac, and also a diuretic. Its principal use is in bronchitis, in which it increases the bronchial secretion. There are three official preparations: the infusion, the fluid extract, and the tincture.

SERPENT-CHARMING. See SNAKE CHARMING.

SERPENT-EAGLE. A crested and spotted eagle of the East Indian and African genus *Spilornis*, the species of which include snakes in their food. The largest and best known by this name is the 'cheele' (*Spilornis undulatus*) of India and eastward, which is brown with a black and white head, round white spots on the lower surfaces, and a broadly banded tail. The same name is given to the harrier eagles (*Batastur*), and especially to the secretary bird (q.v.).

SERPENTINE (OF., Fr. *serpentin*, from Lat. *serpentinus*, relating to a serpent, from *serpens*, creeping, snake). A hydrated magnesium silicate mineral that crystallizes in the monocline system. It has a resinous to greasy and earthy lustre, and in color ranges through the different shades of green to brown, and sometimes yellow. Serpentine is rarely found crystallized, as it most commonly occurs in fibrous or lamellar aggregations. It takes a high polish, and is frequently employed as a material for ornaments. Serpentine frequently occurs in sufficient masses to form rocks, and in such cases it is generally associated with other minerals, viz. fibrous hornblende, talc, calcite, magnesite, chlorite, chromite, and oxides of iron, with residual portions also of angite, olivine, and hornblende crystals. The color of the rock, which is generally some variety of green, and the streaks of brown iron oxide, are responsible for the name serpentine. As a building stone, serpentine has great toughness and durability, combined with beauty of color, and being soft, is easily cut. It not infrequently contains, however, numerous crystals of a variety of garnet known as pyrope (Bohemian garnet, Cape ruby), which, while adding some beauty to the stone, offer by their extreme hardness a serious obstacle to its working. The fibrous variety of serpentine, asbestos (q.v.), is utilized in the manufacture of fire-proof materials. Serpentine are the principal source of

of the deposits of nickel and platinum and are associated with these rocks. Serpentine, with calcite, magnesite, or dolomite forms a beautiful mottled or veined rock to which the name ophiolite or ophiocalcite, or, more commonly, Verde antique, is given. This material is used for ornamental pillars and decorative purposes.

SERPENT MOUND. A remarkable earth-work near Peebles, Adams County, Ohio, 71 miles east of Cincinnati. It is in the form of a huge serpent, 1000 feet long, 5 feet high, and 30 feet wide at the base. The tail ends in a triple coil, and between the open jaws lies an egg-shaped mound 109 by 39 feet. It is supposed to be the work of the Mound Builders (q.v.). See ARCHEOLOGY, AMERICAN.

SERPENT-WORSHIP. See NATURE-WORSHIP; OPHIDIUS.

SERPETTE, sâr'pêt', GASTON (1846-). A French composer, born at Nantes. He studied at the Paris Conservatory (1868-71) under Ambroise Thomas, and won the Grand Prix de Rome with his cantata *Jeanne d'Arc*. In 1874 his first opera, *La branche cassée*, was produced in Paris, and he subsequently brought out more than thirty similar works, of which the best known are *Le carillon* (1896), *Cendrillonnette* (1890), and *La dot de Brigitte* (1895).

SERPULA (Neo-Lat., from *serpere*, to creep). A marine annelid worm which secretes a tubular calcareous shell,

A GROUP OF SERPULA.

The worms (*Serpula vermicularis*) are shown with expanded tentacles, as if under water.

and often forming large detached masses of reddish rock. The large, solid limestone tubes of these worms materially assist in building up coral reefs, especially on the coast of Brazil. Serpulae have been noticed by A. Agassiz to often form on coral reefs incrusting masses of considerable extent. Serpulae occur at great depths in the Gulf of Mexico, while some were dredged by the

Challenger Expedition at depths of nearly 3000 fathoms. A mass of serpula with all their crimson tentacles expanded is a very beautiful object.

SERRA, sër'râ, MIA EL JOSÉ. See JUNIPERO.

SERRADELLA, or **SERRADILLA** (Port. *serradilla*, diminutive of *serrado*, serrate, from Lat. *serratulus*, saw-shaped, from *serra*, saw), BIRD'S-FOOT (*Ornithopus sativus*). An annual leguminous plant indigenous to Southern Europe and Northern Africa, cultivated for forage, hay, and green manuring. It prefers a moist climate and a sandy soil of good tilth. When broadcast the land is harrowed and sometimes rolled to press the seed into the soil. In drilling the seed is planted about an inch deep. Two cuttings are obtained during the season. If sown about

April 1st it can be used for green forage in July and a second cutting may be obtained in September. It is cut for hay at the close of the blossoming period.

The green crop (cut when in bloom) has the following average composition: Water, 79.9; protein, 2.9; fat, 0.7; nitrogen-free extract, 10.0; crude fibre, 3.4; ash, 3.1 per cent. The hay contains: Water, 9.2; protein, 15.2; fat, 2.6; nitrogen-free extract, 44.2; crude fibre, 21.6; and ash, 7.2 per cent. Like other leguminous crops, it has a fairly high protein content. In feeding value it does not differ greatly from red clover. It has the advantage that it may be fed up to nearly the end of the blooming period without deterioration. When the hay is cured care must be taken to prevent loss due to the breaking of fine leaves and stems.

SERRA DO MAR, sër'râ dô mâr. The southern division of the Brazilian Coast Range, running along the southeastern coast of the country through the States of Paraná, São Paulo, and Rio de Janeiro. To the south, in Santa Catharina and Rio Grande do Sul, runs the somewhat distinct range known as the Serra Geral, while the northern division of the Coast Range bends west toward the Serra da Mantiqueira, which runs parallel with the Serra do Mar, separated from it by the valley of the Parahyba River. The range is the outermost escarpment of the great Brazilian plateau, and forms the divide between the Paraná River and the very short streams running into the Atlantic Ocean. Near Rio de Janeiro, where it reaches its highest elevation (from 6000 to 7000 feet), it is very rugged with numerous sharp granite crags, which from a distance suggest the pipes of an immense organ, whence this portion has been called the Organ Mountains.

SERRANIDÆ (Neo-Lat. nom. pl., from Lat. *serra*, saw). The family of sea-bass (q.v.), many species of which are called 'serranos' by the fishermen of Spanish America.

SERRANO Y DOMINGUEZ, sër-râ'nô é dô-mên'gâth, FRANCISCO, Duke de la Torre (1810-85). A Spanish statesman and general, born near Cadiz. He fought against the Carlists from 1833 to 1839, and attained the rank of brigadier-general. Elected to the Cortes from Malaga in 1839, he joined with Espartero in bringing about the overthrow of the Queen mother Christina in 1840, but three years later turned against the regency of Espartero and was Minister of War for some time after the beginning of the personal reign of Isabella II. He became lieutenant-general in 1847, captain-general of the army and military Governor of New Castile in 1856, Ambassador at Paris in the following year, and from 1859 to 1862 was Captain-General of Cuba. His services in the reconquest of Santo Domingo gained him the dual title, and on his return to Spain in 1863 he was made Minister of Foreign Affairs. A faithful follower of O'Donnell, he succeeded the latter in 1867 as chief of the Liberal Union, and in spite of his intimate relations with Queen Isabella plotted assiduously against her Government. With other leaders of the Opposition he was transported to the Canary Islands in July, 1868, but returned to Cadiz in September after the outbreak of the military revolution, assumed charge of the movement together with Prim, Topete, and Sagasta (qq.v.).

and at the head of the revolutionary forces defeated the royal troops at Alcolea (September 28th). Isabella fled to France and Serrano was declared by the Cortes Regent of the kingdom in June, 1869, having acted in the interval as chief of the provisional Government. Under King Amadeus he was at the head of two short lived Ministries (January-July, 1871; June 1872), and carried on an active campaign against the Carlists (1872). Serrano looked with disfavor upon the establishment of the Republic, following the abdication of Amadeus, and upon the overthrow of the Government by General Pavia in January, 1874, became chief of the executive, holding office till the accession of Alphonso XII. He died in Madrid.

SERRET, se-râ', JOSEPH ALFRED (1819-85). A French mathematician, born in Paris, and educated in the Ecole Polytechnique. In 1861 he became professor at the Collège de France. Serret's mathematical text-books are very valuable. The following list comprises his most important treatises: *Cours d'algèbre supérieure* (4th ed., 1879); *Traité de trigonométrie* (7th ed., 1888); *Eléments de trigonométrie* (1853); *Cours de calcul différentiel et intégral* (4th ed., 1894). Serret also edited the works of Lagrange (7 vols., 1867-92) and Lacroix's *Calculus* (1881).

SERTORIUS, QUINTUS. A Roman commander in the latter years of the Republic. He fought, B.C. 105, in the disastrous battle on the Rhone, in which the Roman proconsul, Quintus Servilius Cæpio, was defeated by the Cimbri and Teutones, and took part in the splendid victory at Aquæ Sextiæ (now Aix), B.C. 102, where Marius annihilated the Cimbri and Teutones, and on the breaking out of the sanguinary struggle between the party of the nobles under Sulla (q.v.) and the popular party headed by Marius (q.v.), B.C. 88, he espoused the cause of the latter. No other Marian general held out so long or so successfully as he against the victorious oligarchy. He fought in conjunction with Cinnæ the battle at the Colline Gate (B.C. 87) which placed Rome at the mercy of the Marians, but he had no hand in the bloody massacres that followed. He got his own troops together, and slew 4000 of the ruffianly slaves whom Marius was permitting to plunder and ravish at will through the city. On the return of Sulla from the East (B.C. 83), Sertorius withdrew into Etruria, and thence he went to Spain, where he continued the struggle in an independent fashion. At the invitation of the Lusitanians, he collected an army composed of natives, Libyans, and Romans, and after a time became the virtual monarch of the whole country. In B.C. 76 Pompeius was sent against Sertorius, but the latter drove him over the Iberus (Ebro) with heavy loss; nor was the campaign of the following year (B.C. 75) more favorable. Finally Perpenna and other Roman officers of the Marian party who had fled to Sertorius in B.C. 77 assassinated him in his own tent in B.C. 72. Plutarch wrote Sertorius's *Life* and Corneille made him the subject of a tragedy.

SERUM (Lat., whey, serum). See BLOOD; SERUM THERAPY.

SERUM THERAPY. As stated in the article on IMMUNITY, the accepted theory of immunity is the antitoxin theory, in accordance with which theory it is believed that artificial

immunity may be acquired through the introduction of attenuated cultures of microorganisms into the animal body. By this means the body is rendered immune to virulent forms of these organisms, through the antitoxins developed in the blood. The use of blood serum containing antitoxins in the treatment or prevention of disease is called serum therapy.

Dr. Nicolas Lambdalaris, of the University of Athens, has published a volume on the serum therapy, organotherapy, antirabies, and antileprosy treatment of the old Greek physicians. Galen used the flesh of the viper's body as an antivenene. Mithridates fortified himself by taking all the known antidotes, and experimented also upon condemned criminals, finally succeeding in rendering himself immune to snake bite. For the latter purpose he took the blood of animals which fed on venomous snakes. Attalus, King of Pergamon, Andromachus, Nero's eldest physician, and Galen used similar antidotes. The discovery by Pasteur in 1857 of the bacterial origin of fermentation led to the discovery of different antitoxins and the establishment of serum therapy in these latter days.

BLOOD SERUM. The germicidal action of blood serum has been tested upon cultures of staphylococci, streptococci, typhoid bacilli, and colon bacilli. Blood serum from healthy persons shows practically no germicidal power over the staphylococcus or streptococcus, but a marked germicidal action on the typhoid bacillus. Blood of cachectic people suffering from various diseases also exhibits marked germicidal power over the typhoid and colon bacilli. Blood removed from persons in the death agony or a few hours after death is strongly germicidal against typhoid and colon bacilli, but not actively so toward staphylococci or streptococci.

In preparing serum for therapeutic use the same general methods are employed in various productions. The following description of the preparation of anti-pneumococcal serum will serve as an example of the process:

ANTI-PNEUMOCOCCUS SERUM. Violent bouillon cultures of pneumococci (the bacteria causative of pneumonia) are injected into a horse, after the organisms in the culture have been killed by prolonged heating at 60° C. After the animal has obtained a certain amount of tolerance to these injections, living cultures of pneumococci are injected in increasing quantities until such injections fail to show constitutional symptoms. Rabbits are infected with living pneumococci meanwhile. From time to time the horse serum is injected into these rabbits. Where the serum of the horse is found by experiment to protect rabbits so that infection does not occur after injection of living pneumococci it is withdrawn from the horse for use, preserved with an antiseptic and bottled. Differing reports have been made as to the efficacy of this serum. It was used first in 1896 by Pane and De Renzi of Naples. Conflicting reports have been received regarding the results; but it is believed by successful experimenters in Naples, Munich, and Berlin that if not deteriorated by age, if used early and in large doses, it will always ameliorate if not cure lobar pneumonia.

ANTIVENENE. Dr. Albert Calmette, of the Pasteur Institute at Lille, France, devised a serum obtained from animals inoculated with rattlesnake poison, termed antivenene. This is not a

serum, and in cases of snake-bite it apparently produces temporary cell stimulation instead of immunity. It should be used within 30 or 90 minutes after the reception of the poison in dosage of 10 c.c. hypodermically. Antivenene is to be issued to all the military hospitals in India, in which country the mortality from snake-bites during the 10 years preceding 1900 averaged 12,000 annually.

ANTICHOLERA SERUM. A series of experiments with this serum has been made at Calcutta, where cholera has been very prevalent and fatal for years among the coolies employed by the tea planters, with a result of a reduction of mortality from cholera of 72 per cent.

ANTITUBERCLE SERUM. The best figures attainable regarding the use of antitubercle serum are those of Stubbert, formerly of the Loomis Sanitarium, Liberty, N. Y., who reports marked improvement in 78 per cent. of the cases in which the serum was used.

ANTI-TYPHOID SERUM. This serum has been used extensively in Netley Hospital, England, and among British troops in India and South Africa as an inoculation to prevent contraction of typhoid. Less than 1 per cent. of the inoculated men fall victims to the disease, and of these less than 25 per cent. die; while of uninoculated men over 2½ per cent. contract the disease, and of these over 22 per cent. die.

DIPHTHERIA ANTITOXIN. The best known antitoxin is that used in combating diphtheria, and obtained from serum of animals which have been inoculated with cultures of the Klebs-Löffler bacillus. While there are a few men of ability and experience who deny its efficacy, a vast number who have thoroughly tested its usefulness contribute an overwhelming and convincing mass of evidence in its favor. It is given by hypodermic injection, preferably between the shoulder blades, as early as diagnosis is made, and is of rapid efficacy in children. The mortality from diphtheria in cases treated with antitoxin is from 9 to 13 per cent., against 35 to 40 per cent. in cases treated by other methods.

ERYSIPELAS SERUM. For purposes of immunizing as well as for curative endeavor in any stage of an attack Marmorek's serum is used. It is composed of two parts of human blood serum mixed with bouillon, one part, sterilized and used in fluid form.

ANTI-STREPTOCOCCUS SERUM. Many diseases become rapidly fatal through the virulence of streptococcus infection added to the original bacterial invasion. Scarlet fever, diphtheria, and tuberculosis are almost always complicated by streptococcal infection, while erysipelas, phlegmon, septicaemia from infected wounds, and also most cases of puerperal septicaemia are directly caused by the streptococcus bacillus. Marmorek's serum very frequently effects their cure; but better results have been obtained from an anti-streptococcal serum, which has reduced the mortality of puerperal septicaemia to 25 per cent. Daily injections for at least a week appear to be necessary.

ANTI-TETANIC SERUM. It was not till 1897 that pure cultures of the germ of tetanus were made by Kitasato, although it was discovered in 1894 by Nicolaier. Formerly the disease was almost uniformly fatal. In the United States this mortality has been reduced to less than 35 per cent., through the use of the serum.

SARCOMA ANTITOXIN. A mixture devised by Coley, of New York, from cultures of bacillus prodigiousus has been successful in a fair proportion of cases.

CARCINOMA ANTITOXIN. Reynier, of France, has reported success with injections of a serum in cases of carcinoma. His serum is that obtained by Wlaeff from the inoculation of birds with blastomyces isolated from human cancers.

TRI NECK'S SERUM. A preparation improperly termed 'inorganic serum' has been used by Trumck and others by hypodermic injection in cases of arteriosclerosis. It is a solution containing the sulphate of chloride, phosphate, and carbonate of sodium, with sulphate of potassium. It increases the alkalinity of the blood and is supposed to dissolve phosphatic deposits in the walls of the vessels.

ANTIPEST SERUM AND HAFKINE'S FLUID. Yersin's antipest serum is blood-serum taken from horses that have been inoculated with the plague. Hypodermic injection of the serum causes immediate immunity, which, unfortunately, lasts only 12 to 14 days. A difficulty in securing acquiescence in repeated injections at once arises, and as a popular treatment it is under a disadvantage. It is, however, the only actual remedy for the plague after it has appeared, for if given early in the disease it is curative. Hafkine's fluid is a liquid in which the bacillus of plague has been cultivated and rendered virulent by special methods, the bacilli after abundant growth being killed by an exposure of the culture to a temperature of 70° C. for several hours. Inoculation with Hafkine's fluid confers immunity which lasts from a few days to several months. A great disadvantage in its use lies in the facts that during immunization the person is more susceptible to plague; and if he has already contracted even a mild form the inoculation might be fatal. Authorities recommend the provision of antipest serum for prompt use in order to avert an epidemic in the first cases and the employment of Hafkine's fluid to inoculate the people dwelling in localities threatened with an invasion of the disease.

SERUMS FOR THE LOWER ANIMALS. The Bureau of Animal Industry of the United States Department of Agriculture has been for years experimenting with serums made from the causative bacilli of hog cholera and swine plague, with a resulting recovery of 80 per cent. of the treated animals, against a recovery of from 15 to 29 per cent. of animals not treated. A serum devised by Loeffler and Uhlenhuth, of Austria, gives immunity for 4 to 8 weeks to animals exposed to foot-and-mouth disease. See VACCINATION, and each of the diseases mentioned; ANTITOXIN; TOXIN. Consult: Sternberg, *Immunity, Protective Inoculations in Infectious Diseases, and Serumtherapy* (New York, 1895); Landau, *Die Serumtherapie* (Berlin and Vienna, 1900); Stetson, *Serumtherapy in the Light of the Most Recent Investigations* (Providence, 1902).

SERVAL (South African name). A large, long-legged African wildcat (*Felis serval*), which may reach 40 inches in length, with a tail 16 inches long. It is varying tawny in color, with black spots, tending to form two longitudinal bands on the back, and rings on the tail. Its fur, known in trade as 'tiger-cat,' may be recognized by two characteristic horizontal black bands on the upper inner surface of

each fore leg. It is found throughout Africa, but its habits are little known.

SERVANT. See MASIER AND SERVANT.

SERVE'TUS, MICHAEL, or, in his native Spanish, MIGUEL SERVETO (SERVEDE) Y RIVAS (c.1511-53). A celebrated antitrinitarian theologian and physician, born at Tudela in Navarre. He began his studies at Saragossa and entered the services of Quintana, later confessor of Charles V., with whom he went to Toulouse in 1528, and there began the study of law. In a short time, however, he gave himself entirely to the knotty points of the Reformation doctrines. In 1530 he went to Basel to hear (Ecolampadius, and thence to Strassburg, where Bucer and Capito taught. His daring denial of the doctrine of the Trinity frightened or angered these divines to such a degree that they denounced him as 'a wicked and cursed Spaniard.' Servetus appealed from their judgment to that of the public in his *De Trinitatis Erroribus Libri VII.* (1531) and his *Dialogorum de Trinitate Libri II.* (1532); but the public thought as little of his teaching as the theologians; and to avoid the odium which it had occasioned he changed his name to Michel de Villeneuve and fled to Paris, where he began the study of medicine. In 1534 he went to Lyons, where he brought out an edition of Ptolemy's geography (1535; 2d ed. 1541); in 1536 he returned to Paris, resumed his medical studies, and received his degree in 1538. In 1537 he attacked Galen and the faculty in a medical work entitled *Syruporum Universa Ratio.* As a physician Servetus possessed no small ability and practiced with success; he is believed by some to have discovered the circulation of the blood. In 1538 he went to Charlieu, and in 1541 found an asylum in the palace of Pierre Paulmier, Archbishop of Vienne, supporting himself by his medical skill and literary work. In Vienne he published in 1542 a new and elegant edition of the Latin Bible of Pagninus with notes, which were not all original. At Vienne he also wrote his famous *Christianismi Restitutio* (first published, anonymously, in 1533). Its celebrity is due more to the fact that it sealed the fate of the author than to its intrinsic merits, the ideas being obscure and the style incorrect. Possibly at the instigation of Calvin, Servetus was arrested and brought to trial at Vienne. On June 17, 1553, he was condemned to be burned, but before this he had made his escape and was endeavoring to reach Italy. On the way he was discovered in Geneva and was imprisoned by Calvin's order. After a trial lasting two months he was condemned as a heretic and was burned at the stake on October 27, 1553. (For further details, see article CALVIN.) On October 27, 1903, an 'expiatory' monument to his memory was unveiled in Geneva. Consult: Tollin, *Das Lehrsystem Michael Servetus* (Gütersloh, 1876-78); Willis, *Servetus and Calvin* (London, 1877). The *Restitutio* has been twice reprinted, first by Dr. Meade (incomplete, as it was suppressed by order of the Bishop of London and burned, 1723), and again by Murr (Nuremberg, 1790); it has been translated into German by Spiess under the title *Die Wiederherstellung des Christenthums* (Wiesbaden, 1892-96).

SER'VIA (Serv. *Srbija*). A kingdom in the northwestern part of the Balkan Peninsula, bounded by the Kingdom of Hungary on

the north, Rumania and Bulgaria on the east, Turkey (the Vilayet of Kossovo and the Sanjak of Novibazar) on the south, and Bosnia on the west. The Danube and its tributary, the Save, bound the country on the north; the Danube separates it from Rumania, and the Drina, an affluent of the Save, forms most of the western boundary. The Timok, an affluent of the Danube, flows about 25 miles on the eastern border. Area, 18,621 square miles.

Servia is mountainous. The Morava valley, with its numerous tributary valleys from west and east, stretches through the land from the southeast to the middle of the northern border, uniting with that of the Danube. The north central section in the Danube valley and the north west section in the Save valley contain the only extensive lowland regions, which are characterized by quaternary alluvium. Near the centre of the kingdom the southern and the western forks of the Morava come together, the one entering from Kossovo, the other rising in the Bosnian water-shed. The mountains of Western Servia belong to the Dinaric system and present Mesozoic and Paleozoic strata and serpentine uplifts. On the boundary of Novibazar stands the mountain wall of Golija Planina (6100 feet), where the western Morava rises. Adjacent in the southeast, across the narrow mountain valley of the Ibar, is the lofty Koponenk Planina (7100 feet)—the highest region in Servia. Generally in this southwestern part of the Kingdom crystalline schists are prominent. Between the western Morava and the valley south of Belgrade is the mountain region of Sumadija, the heart of Servia, culminating in the Rudnik, nearly 4000 feet. This is a heavily forested territory, oaks and beeches predominating. The mountains east of the Morava belong to the Southern Carpathians and to the Balkans. The former of these systems in Servia is a continuation of the Banat region, and the Danube pierces here through the imposing gorge known as the Iron Gate. The formations here are of cretaceous limestone and of various schists interrupted by volcanic stone and ore strata, and hot springs are frequent. The highest elevation in Eastern Servia is not far from the southeast border—the Suva Planina, 6000 feet.

Servia is a well-watered country, belonging entirely to the basin of the Danube. The wide, fertile valley of the Morava represents the largest cultivated territory. The climate is moderate in the Danube Valley and somewhat cold in the mountains. It is healthful save in the lowlands adjacent to the Danube. The rainfall is ample, 25 inches being the annual average. The vegetation, like the climate, is more akin to that of mid-Europe than to that of the Mediterranean basin. The fauna includes the bear, lynx, and wild boar. The forests cover about one-third of the area, but are being rapidly cut down. The mineral resources are varied and of value, but there is little mining, owing to the lack of capital and facilities. Coal alone is mined to any important extent, and that in the northeast.

The population is almost entirely agricultural. About 70 per cent. of the total area is productive. There are about 4,500,000 acres under cultivation, nearly all tilled by the owners. There are few large farms. Modern processes in farming are slow of introduction. Cereals, with corn at the head, are the chief crops. Corn is the staple food

Wool and flax are an important crop. Grapes, a noteworthy item of export, are raised in the south. Silk culture is confined to a good beginning. The best pastures are in the southwest. Cattle, sheep, and swine are raised extensively, oxen being used freely as pack animals. In 1900 Servia had 956,661 cattle, 3,061,759 sheep, 959,580 hogs, and 184,849 horses.

The manufactures are of little importance, being chiefly native and household, and confined in the main to the production of war accoutrements, cotton goods, glass, and carpets. The only water communication is afforded by the Danube and the Save on the northern border. The main railroad line is the Belgrade, Nish and Vrania, which forms a part of the International Railway, and with its branch lines has a total mileage of 354. It is under Government control. The trade of Servia (exclusive of the transit trade) in 1901 amounted to \$21,278,610, including exports to the value of \$12,691,702, and imports, \$8,586,908. Live stock and farm products are the leading exports.

The establishment of the National Bank of the Kingdom of Servia in 1883 marked the beginning of a new era in Servian banking. It is empowered to issue bank notes. In 1900 there were 5 smaller banking establishments. In 1875 the French standard of money, weights, and measures was adopted. The dinar, the unit of the monetary system, corresponds to the franc and equals 19½ cents in United States money. The public finances of Servia previous to the Treaty of Berlin, although not on a systematized basis, were nevertheless in a fairly good condition. As a result, however, of the cost of the wars of 1876-78 and the liabilities fastened upon the country by the Congress of Berlin and of Servia's participation in the construction of the International Railway, a large national debt was created, which in 1903 had risen to \$81,500,000.

In 1882, four years after its complete independence was acknowledged by the Treaty of Berlin, the Principality of Servia became a constitutional monarchy. A new Constitution supplanting the former one of 1869 was promulgated by the National Assembly in 1889. The Executive Department is composed of the King and a Cabinet of eight Ministers, responsible to the nation. The National Assembly, or Skupshtina, consists of 262 Deputies, 64 appointed by the King and 198 elected members apportioned among the various provinces or departments on the basis of one member for each 4500 tax paying male citizens. An additional member is allowed for each surplusage of 3000. All male Servians 21 years of age paying a direct annual tax of about \$3 are entitled to suffrage. There is also a State Council composed of 16 members, 8 appointed by the King, and 8 chosen by the Skupshtina, which supervises certain financial matters, hears claims against the Government, and examines proposed legislation. The Great National Assembly, which is convened to act upon special matters of great moment, consists of double the number of members of the ordinary Skupshtina, and is wholly an elective body. The judiciary is vested in a High Court of Appeal, a Court of Cassation, a Commercial Court, and 23 courts of the first instance. For purposes of local government Servia is divided into 17 prov-

inces or departments. The capital and largest city is Belgrade (q.v.). The second city in size is Nish.

The population in 1901 was 2,493,770, almost all being Serbs, or Servians (of the Slav family), and Greek orthodox. There are 9 cities of over 8000. The cities, by striking contrast to the districts, are rapidly taking on the characteristics of modern European towns. There is no caste. All Christian religious faiths are tolerated. The national Church is governed by a synod of bishops. Education is free and on a rather promising footing, but the percentage of illiterates is large. The attendance is meant to be obligatory, but there is a lack of instructors. The State maintains the high schools, and pays part of the expense of the elemental schools, the municipalities paying the balance. At the head of the educational system is the scientific 'Great School' at Belgrade, with faculties of technical science, philosophy, and law. It is virtually a university.

HISTORY. The land occupied by modern Servia lay chiefly in the Roman province of Mœsia, and was peopled by Thracian or Illyrian tribes. It was overrun successively by Huns, Ostrogoths, and Lombards, and in the seventh century was seized by the Avars. About 637 the Serbs or Servians, a Slavic tribe, entering the country at the invitation of the Emperor Heraclius, to oppose the Avars, occupied it from the Save to the Balkans and from the Morava and the Adriatic. They were converted to Christianity about the middle of the ninth century, and for two centuries were engaged in constant warfare with the Bulgarians, Asiatic invaders on the north, who at that time terrorized the Greek Empire. In the eleventh century the Byzantine Imperial authorities, who had hitherto allowed the Servians to retain a practically autonomous patriarchal government under their Grand Shupans, or native chiefs, sought to put more restrictions upon them. The Servians threw off the Imperial authority, and their Grand Shupan Michael (c.1050-80) proclaimed himself King of Servia and was so recognized by Pope Gregory VII. The hard struggle for independence ensued, occupying nearly three generations. In 1165 Stephen Nemanja (or Nemanja) founded a dynasty which lasted nearly two centuries. Under this dynasty the territory of Servia gradually expanded, and its power increased, reaching its height under Stephen Dushan (1331-55), when the Servian Empire, as it proudly called itself, embraced Bosnia, Albania, Macædonia, Thessaly, part of Bulgaria, and all of the Hellenic peninsula except Attica and the Peloponnesus. The Byzantine Emperor sought the alliance of the Servian monarch, who was a statesman as well as a general. But Dushan died before he was able to organize and consolidate his territories, and the advance of the Turks broke up the short-lived empire he had created. The dynasty of Nemanja closed with Dushan's son, who died about 1371. The tide of Turkish invasion was now sweeping over the Balkan Peninsula, and the battle of Kossovo in 1389 placed Servia at the mercy of the Ottomans. A small body of survivors of the Servian forces found refuge in the mountainous region since known as Montenegro (Crnagora). Servia passed under Turkish rule, its subjugation being completed by Sultan Mohammed in 1459. It was the scene of devastating warfare between Hun-

gary and the Turks. In 1566 Belgrade, which had been occupied by the Hungarians, was successfully defended against the Turks by the heroic John Hunyady and a crusading force, but in 1521 Sultan Solymán the Magnificent made himself master of the city. In 1718 Belgrade and part of Serbia were ceded to Austria, but were retroceded in 1739. Under the rule of the Turks Serbia suffered fearful oppression. The native nobility became extinct and the Servians were reduced to a race of peasants. In 1804 the people rose under Czerny George (q.v.), or Kara George. Assisted by Russia, the Servian leader was able to win for his people a partial autonomy. The Napoleonic wars, however, compelled Russia to withdraw her assistance, and Serbia was resubjected to the Ottoman yoke in 1813.

In 1815 Milosh Obrenovitch (q.v.), who had served under Kara George, suddenly headed another revolt, which proved successful, and in 1817 he was elected by the chiefs and the clergy Prince of Serbia. After the disastrous war with Russia in 1828-29 Turkey granted autonomy to Serbia and recognized Milosh as hereditary Prince (1830). Turkey, however, retained the right of keeping garrisons in the country. Milosh abdicated in 1839 because Russia and Turkey insisted upon a constitution which practically put the powers of government into the hands of a Senate. He was succeeded by his son Milan, who reigned but a few weeks, and was succeeded by his brother Michael. A strong party opposed to the Obrenovitch dynasty deposed Michael in 1842 and made Alexander, son of Kara George, Prince. Alexander Karageorgovitch was wholly under the influence of Austria and the Porte, and was deposed in 1858. The aged Milosh was recalled, and in 1860 died, being again succeeded by Michael, who developed the idea of uniting in one nation all the Serbs, who are the main body of the population in Bosnia, Herzegovina, and Montenegro, as well as Servia. He secured the withdrawal of all Turkish garrisons from Servia in 1867, and was on the point of accomplishing even more in the direction of nationalization and independence when he was assassinated by adherents of the rival house in 1868. As Michael had no direct heir, the Skupshtina or Senate proclaimed his nephew, Prince Milan, who attained his majority in 1872. Under the guidance of the Prime Minister Ristić (q.v.) Servia was given a constitutional organization, with a Council of State, and the Skupshtina was transformed into a Chamber of Deputies, elected by proportional representation. In July, 1876, Servia declared war against Turkey, being joined by Montenegro. The Servians, generally unsuccessful, notwithstanding the help of numerous Russian volunteers, were totally defeated at Dimis and Alexinatz in October. An armistice followed, and a treaty of peace was signed March 1, 1877. In April Russia declared war against Turkey (see RUSSO-TURKISH WAR), but Servia did not venture to take the field until the fall of Plezna had virtually decided the war. The complete independence of Servia was established by the Treaty of Berlin (see BERLIN CONGRESS OF), which also gave the country an increase of territory. In 1882 the principality was proclaimed a kingdom. In 1885 war was declared against Bulgaria, but the Servian army, though larger and better equipped than that of the enemy, was defeated

by the military genius of Prince Alexander of Bulgaria (q.v.), and Servia was invaded. Peace was secured through the intervention of the Great Powers. King Milan, who had sought to strengthen his position by promulgating a liberal constitution, January, 1889, dissatisfied with the democratic course of the radicals, abdicated March 6, 1889, in favor of his son Alexander I. (q.v.), who dispensed with a regency in 1893.

Alexander began at once to act the autocrat. In 1891 he recalled his father to assist him against his radical ministers, and by proclamation restored their full privileges to his father and mother, Natalie. On May 21st he abolished the liberal Constitution of 1889, restoring that of 1869. In 1900 he married Draga Mašin, in defiance of his father's wishes. The new Queen was many years his senior, and had been dismissed from the service of Queen Natalie because of her intrigues. Milan was once more exiled, and Alexander began a period of high handed personal rule which aroused intense hostility among the most influential persons in the kingdom. The attempt of Queen Draga to impose upon the people the belief that an heir to the throne was in prospect increased the popular dislike. In April, 1903, King Alexander abrogated the Constitution, changed the Ministry and the laws, and then restored the mutilated Constitution to operation. This was a process attended with some peril in a country where liberalism and even republicanism had been growing. A conspiracy was formed by leading officers of the army, and on June 11th the palace was entered and the King, the Queen, two of her brothers, and two of the Cabinet, Premier Markovitch and Minister of War Pavlovitch, were assassinated. So far as any external evidence was given, the King and Queen had hardly a friend in Servia. The people received the revolution with approval or stolid indifference. A provisional government of liberals was formed and the family of Karageorgovitch, the rivals of the House of Obrenovitch, was restored in the person of Prince Peter, then living in exile in Geneva. See PETER I. KARAGEORGEVITCH.

SERVIAN LANGUAGE. See SERBO-CROATIAN LANGUAGE.

SERVIAN LITERATURE. I. ANCIENT PERIOD TO THE END OF THE FOURTEENTH CENTURY. The earliest literature was in Old Church Slavonic and consisted of ecclesiastical books. The earliest extant monuments belong to the twelfth century. Besides the books necessary for the liturgy others were translated or compiled from Greek originals. A greater claim to the title of literary productions belongs to the lives of the saints of the Servian Church and prominent Servian rulers and personages. Among the numerous political, diplomatic, and judicial monuments of the period, the so-called *Vimodolian Law* and the Code of King Dushan are remarkable for the purity of the language employed and the flood of light they shed on many points connected with the history and civilization of Servia.

II. MIDDLE OR DALMATIAN PERIOD. (Fifteenth to seventeenth century, inclusive.) The half-Slavic, half-Italian, commonwealth of Ragusa or Dubrovnik, in Dalmatia, produced a number of eminent writers. Among them Gundulič (1588-1638) (q.v.) with his heroic epic *Osman*, Diokovitch (1563-1631), and the dramatist Palmotitch (1606-57), author of a *Christiad*, deserve special mention. The lyric poet Katchitch-Mirolitch (1690-1760) with his *Discourse* is the connecting link between the old Dalmatian and the modern Servian literature.

III. MODERN SERVIAN PERIOD. (Eighteenth century.) The contact with Western Europe at the end of the seventeenth and the beginning of the eighteenth century resulted linguistically in a mixture of Servian, Old Slavic, and Russian forms. The names most prominent during the eighteenth century are those of Yovan Rayitch (1726-1801), who wrote a *History of the Slavic Peoples, especially the Bulgarians, Croatsians, and Serbians* (1768, last ed., 4 vols., Buda, 1823), and Obradovitch (1739-1811), the pioneer of modern Servian. The latter went back to the native popular tongue in his writings: *Life and Adventures; Counsels of Common Sense*, a course of practical ethics; and the *Collection of Various Moral Triplex* (Vienna, 1793). Though still laden with Russian and other non-Servian expressions, his style is quite flexible, often graceful, and exhibits a preponderance of purely Servian words.

IV. NINETEENTH CENTURY. The first half of the nineteenth century was marked by the literary labors of the great Karajitch (1787-1864) (q.v.), the "father of modern Servian." He employed the pure Servian of the common people (of the south Shtokavian dialect) with such art, force, and purity that it was finally accepted as the standard. The sentimental novels of Milovan Vidakovitch (1780-1841), the pseudo-classical odes of Muhički (1777-1837), and the epics of Milutinovitch (1791-1848) gave way to the more national, realistic, and life-like writers of the stripe of Branko Raditchevitch (1824-53). Of his poems the best are *The Pupils Parting* and *The Path*. Another distinguished poet is the last *stodila* of Montenegro, Peter H. Petrovitch Njegosh (1813-51), whose most important work is the *Mountain Crown*, a poem in dramatic form, relating the slaughter of the Mohammedanized Montenegrins by their Christian brethren, about the end of the eighteenth cen-

tury. Zmaj Yovan Yovanovitch (see JOVANOVIĆ), born in 1833, is the greatest Servian poet living. Duro Yakshitch and Lazar Kostitch sharing with him the field of poetry. Among the novelists, Milan Militchevitch (q.v.) with his *Winter Evenings* holds the foremost place. Prince Nicholas of Montenegro, a poet of genuine inspiration and strength, is the author of the national (Montenegrin) hymn *Thithër! Thithër!* In Croatia, whose literary language is the same as that of Servia (the written characters, however, being different), the reforms of Karajitch found an enthusiastic supporter in the poet-publicist Ljudevit Gaj (1809-72). Of the other Croatian writers, by far the greatest is Ivan Mažuranić (1814-90) (q.v.), chiefly known as an epic poet. The lyric poet Preradovitch (1818-72) and Bogovitch (1816-93), the author of dramas and epics, also deserve mention. The scientific literature in Servian is of considerable extent.

The oral (popular) literature falls into two main divisions, with regard to subject matter: (a) the so-called *yunak* (brave, hero) songs, epic in character, relating the achievements of the national heroes; (b) the *feminine*, lyric in nature, dealing with the softer sides of the nation's life, chiefly, but not exclusively, with the lot of woman. In the epic (*yunak*) songs the four chief periods of Servian history are easily discernible: those composed in the earliest period, exhibiting the earlier strata of mythology overrun by and intermingled with later Christian elements; those narrating the glorious period of the Nemanya dynasty (from the twelfth to the fourteenth century); the songs depicting the loss of Servia's independence at Kossovo (1389) and subsequent events; the songs of modern times of the struggle for independence at the outset of the nineteenth century, including commemorations of the great leader Kara or Black George, and the Montenegrin uprisings, etc. This form of literary production is still going on.

SERVIAN POLITICAL PARTIES. See POLITICAL PARTIES, section *Balkan States*.

SERVIAN WALL (Lat. *agger Serrii Tullii*). The first inclosing wall of ancient Rome, the construction of which is assigned to Servius Tullius. The wall was constructed against one of the cliffs forming the face of the Capitoline, Quirinal, Oppian, Cælian, and Aventine Hills, crossing the narrowest parts of the valleys between, and reinforced at its weakest points by an *agger* consisting of an embankment with an outer wall and ditch. The whole course of the Servian wall and the position of the gates have been definitely ascertained by excavations made since 1860.
